## Massachusetts Statewide STEM Indicators Project (MASSIP)

## 2009 Report

## Background and Development

The Massachusetts Mathematics, Science, Technology \& Engineering Grant (Pipeline) Fund was established under the Acts of 2003 Economic Stimulus Trust Fund. The Massachusetts Department of Higher Education (DHE) was directed to administer the Pipeline Fund with a focus on three goals:
(1) to increase the number of Massachusetts students who participate in programs that support careers in fields related to mathematics, technology, engineering, and science;
(2) to increase the number of qualified mathematics, technology, engineering, and science teachers in the Commonwealth; and,
(3) to improve the mathematics, technology, engineering, and science educational offerings available in public and private schools.

The DHE created Regional PreK-16 Networks to plan and implement teacher and student activities which address the Pipeline Fund's goals. In addition, the DHE contracted with the University of Massachusetts Donahue Institute to develop a statewide science, technology, engineering, and mathematics (STEM) indicators system and annual report that would serve to benchmark Massachusetts' progress in key educational and economic areas associated with the Pipeline Fund's goals.

Recognizing the vast number of initiatives in place across Massachusetts to address STEM educational issues, this indicators system is not intended to specifically evaluate the impact of those activities directly supported by the Pipeline Fund. Rather, it serves as a reflection of the overall state of the combined efforts across the Commonwealth to increase the "flow" of students through a STEM educational "pipeline." Annual indicators' reports provide a basis for charting the Commonwealth's progress as a whole in promoting STEM education at all levels. A conceptual model of the STEM Pipeline is presented on the following page.

The purpose of the Massachusetts Statewide STEM Indicators Project (MASSIP) is to annually collect, analyze, and present a set of measurements that reflect a range of educational and economic conditions that are indicative of the state of the Massachusetts STEM Pipeline. Data collected in support of MASSIP are to be publicly available, be free of charge, and meet four criteria:
A. Be Focused: Each indicator should speak directly to Massachusetts' educational and workforce status in STEM related areas.
B. Be Meaningful: Data should be useful to a wide variety of audiences and purposes.
C. Be Accessible: Data should be available at no cost through currently existing secondary sources.
D. Be Perennial: Data should be consistently available on an annual (or other cyclical) basis.

Please note that MASSIP uses a broad definition of STEM that incorporates all of the following subject/employment areas: (1) Agriculture, Conservation, and Natural Resources, (2) Architecture, (3) Biological and Biomedical Sciences, (4) Computer and Information Sciences, (5) Engineering and Engineering Technologies/Technicians, (6) Health Professions and Clinical Sciences, (7) Mathematics and Statistics, (8) Physical Sciences, and (9) Science Technologies/Technicians. As a result, data from MASSIP may not be comparable to data from other sources that use a different definition of STEM. See Technical Notes for further details about MASSIP and its data.

## Science, Technology, Engineering, and Mathematics (STEM) Pipeline Conceptual Model

UMass Donahue Institute Research and Evaluation Group

## Indicators

## I. STEM Preparation of K-12 Students

A. STEM Teachers

Indicator 1: Number of STEM teachers.
Indicator 2: Number of individuals who pass STEM-subject teacher licensure tests.
B. STEM Educational Opportunities

Indicator 3: Time per week students spend in mathematics instruction.
Indicator 4: Time per week students spend in science instruction.
Indicator 5: Highest mathematics course students take during high school.*
Indicator 6: Science courses students take during high school.

## II. STEM Achievement and Interest of K-12 Students

## A. STEM General Literacy

Indicator 7: Student achievement on state mathematics exams.
Indicator 8: Student achievement on state science exams.
B. STEM National Attainment

Indicator 9: Students' mathematics scores on the National Assessment of Educational Progress.

Indicator 10: Number of students taking the PSAT and their scores in mathematics.
Indicator 11: Number of students taking the SAT and their scores in mathematics.
Indicator 12: Number of students taking STEM Advanced Placement tests and the percentage who score three or higher.
C. STEM Interest

Indicator 13: Percentage of sophomore PSAT test-takers interested in majoring in a STEM area in college.

Indicator 14: Percentage of junior PSAT test-takers interested in majoring in a STEM area in college.

Indicator 15: Percentage of SAT test-takers interested in majoring in a STEM area in college.

## III. STEM College Completions

Indicator 16: Number of college students who complete degrees in Agriculture and Natural Resources.**

Indicator 17: Number of college students who complete degrees in Architecture.**
Indicator 18: Number of college students who complete degrees in Biological and Biomedical Sciences.

Indicator 19: Number of college students who complete degrees in Computer and Information Sciences.

Indicator 20: Number of college students who complete degrees in Engineering and Engineering Technologies/Technicians.*

Indicator 21: Number of college students who complete degrees in Health Professions and Clinical Sciences.

Indicator 22: Number of college students who complete degrees in Mathematics and Statistics.

Indicator 23: Number of college students who complete degrees in Physical Sciences.
Indicator 24: Number of college students who complete degrees in Science Technologies/Technicians.**

Indicator 25: Number of college students who complete degrees in all STEM majors.**

## IV. STEM Employment

Indicator 26: STEM employment.
Indicator 27: Job vacancy rates in STEM occupational areas.

## Index of Sections, Indicators, Tables, and Charts

[^0]
## General Technical Notes

## Competitor States

Where comparable data are available, The Massachusetts Statewide STEM Indicators Project (MASSIP) uses the set of states defined by the Massachusetts Technology Collaborative's (MTC) John Adams Innovation Institute as the Commonwealth's primary economic competitors. In MTC's 2008 Index of the Massachusetts Innovation Economy (the most recent report at the time data were collected for MASSIP 2009), this group of competitor states consisted of: California, Connecticut, Illinois, Minnesota, New Jersey, New York, North Carolina, Pennsylvania, and Virginia. MASSIP also includes data on the U.S. as a whole as another point of comparison. A copy of the 2008 Index of the Massachusetts Innovation Economy (as well as copies of past reports) can be found at: http://www.masstech.org/institute2009/the index.html. The home page for the MTC is: http://www.masstech.org/.

Our use of this set of states for comparison purposes is not meant to imply that these are the only states against which Massachusetts should compare itself with regard to STEM education and economic issues. Indeed, there are many states that are not included here in which promising STEM educational and economic policies, practices, and programs have been developed. Rather, our focus on these particular states is an outcome of the following considerations:
I. Philosophical: The Pipeline Fund was founded as an economic initiative and MTC's list represents the states with which the Commonwealth competes directly in key economic areas.
II. Scholarly: MTC's list is determined by a metric-based evaluation that is consistent over time. In addition, states on this list are frequently included in economic and education research conducted by other groups.
III. Practical: A limited, consistent set of comparison states allows for a more useable and manageable report.

The technical notes for each individual indicator include references and links to data sources, all of which are publically available. Parties who are interested in data for states that are not part of our analysis can download parallel information from these sources, or they may contact staff from the University of Massachusetts Donahue Institute for assistance (see Contact Information below).

## STEM Subjects

Traditionally, STEM is defined as the sum of six academic/employment categories: (1) Biological and Biomedical Sciences, (2) Computer and Information Sciences, (3) Engineering, (4) Health Professions and Clinical Sciences, (5) Mathematics and Statistics, and (6) Physical Sciences. MASSIP, however, uses a broader definition of STEM that includes not just these six categories, but also: (7) Agriculture, Conservation, and Natural Resources, (8) Architecture, and (9) Engineering Technologies/Technicians and Science Technologies/Technicians. As a result, data from MASSIP may not be comparable to data from other sources that use a different definition of STEM.

Furthermore, in order to make analysis across MASSIP indicators parallel, some STEM categories in this report represent a combination of categories that appear separately in certain data sources. Data prior to 2007 from the College Board (http://www.collegeboard.com/), specifically data for interest in college majors among PSAT and SAT test-takers (http://professionals.collegeboard.com/data-reportsresearch), groups agriculture with natural resources and conservation, and engineering with

UMass Donahue Institute
Research and Evaluation Group
engineering technologies/technicians. In order to keep our analysis of SAT and PSAT data consistent over time, and in order to keep data from other sources parallel to the SAT and PSAT data, we have maintained these grouped categories throughout the report.

In sum, the specific STEM academic/employment categories MASSIP uses are:
I. Agriculture, Conservation, and Natural Resources
II. Architecture
III. Biological and Biomedical Sciences
IV. Computer and Information Sciences
V. Engineering and Engineering Technologies/Technicians
VI. Health Professions and Clinical Sciences
VII. Mathematics and Statistics
VIII. Physical Sciences
IX. Science Technologies/Technicians

## Notes on Indicators

Changes in how our sources gather, aggregate, or publish data may result in occasional modifications to our set of indicators. If such changes occur, we will make note of it.

In 2008, the College Board changed how it published data on math courses taken by SAT test-takers. Prior to 2008, the "College Bound Seniors" reports tabulated the number of test-takers who took each kind of math course (resulting in a list where each test-taker was represented multiple times: once for every course she reported taking). Beginning in 2008, the College Board modified this tabulation to include only the highest math course each test-taker reported taking (resulting in a list where each testtaker is represented only once). As a result, our Indicator 5 has been changed from "Mathematics courses students take during high school" to "Highest mathematics course students take during high school." Additional information can be found in the technical notes for Indicator 5.

Earlier MASSIP reports used a traditional definition of STEM fields/majors that included the following: Biological and Biomedical Sciences, Computer and Information Sciences, Engineering, Health Professions and Clinical Sciences, Mathematics and Statistics, and Physical Sciences. The 2009 MASSIP report uses an expanded definition of STEM fields/majors that adds the following: Agriculture, Architecture, Engineering Technologies/Technicians, Conservation and Natural Resources, and Science Technologies/Technicians. The addition of these fields/majors resulted in four new and revised indicators within the College Completions section.

Specific technical notes can be found following the presentation of each individual indicator.

## Contact Information

Research and analysis for the Massachusetts Statewide STEM Indicators Project (MASSIP) is conducted by the University of Massachusetts Donahue Institute (http://www.donahue.umassp.edu/). Questions and comments may be directed to the Donahue Institute's Applied Social Science Research and Evaluation Group:

| Schools with High, Middle \& Elementary School Grades | 17 | 10,300 | 885.3 | 87.6 | 66.9 | 2,989 | 353 | 268 |
| Schools with Middle School Grades Only | 315 | 186,764 | 14,319.7 | 2,382.7 | 1,813.5 | 54,099 | 9,659 | 7,651 |
| Schools with Middle \& Elementary School Grades | 828 | 333,921 | 24,077.0 | 670.0 | 436.5 | 103,484 | 2,401 | 1,746 |
| Schools with Elementary School Grades Only | 356 | 125,797 | 8,209.5 | 46.8 | 20.2 | 35,265 | 88 | 115 |
| Total | 1,870 | 962,806 | 70,518.7 | 6,598.9 | 5,319.6 | 275,588 | 28,214 | 23,424 |

Data Source: Massachusetts Department of Elementary and Secondary Education.
Note: High School grades include 9, 10, 11, and 12. Middle School grades include 5, 6, 7, and 8. Elementary School grades include PK, K, 1, 2, 3, and 4 .

Table I-2: Percentage of STEM Teachers Licensed in Teaching Assignment and Percentage of STEM Classes Taught by Highly Qualified Teachers 2007-2008 School Year (MASSIP 2009 Indicator 1)

|  | Percentage of Teachers Licensed in Teaching Assignment: All Subjects | Percentage of Teachers Licensed in Teaching Assignment: Math | Percentage of Teachers Licensed in Teaching Assignment: Science | Percentage of Core Academic Classes Taught by Teachers Who are Highly Qualified: All Subjects | Percentage of Core Academic Classes Taught by Teachers Who are Highly Qualified: Math | Percentage of Core Academic Classes Taught by Teachers Who are Highly Qualified: Science |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Schools with High School Grades Only | 94.6\% | 95.3\% | 94.0\% | 94.1\% | 93.9\% | 91.1\% |
| Schools with High and Middle School Grades | 89.5\% | 88.4\% | 87.8\% | 93.4\% | 93.0\% | 92.0\% |
| Schools with High and Elementary School Grades | 96.1\% | 95.0\% | 93.3\% | 93.0\% | 89.4\% | 87.5\% |
| Schools with High, Middle and Elementary School Grades | 79.6\% | 80.5\% | 77.2\% | 88.2\% | 87.0\% | 84.3\% |
| Schools with Middle School Grades Only | 95.2\% | 94.6\% | 95.6\% | 94.6\% | 93.5\% | 93.8\% |
| Schools with Middle and Elementary School Grades | 97.3\% | 94.9\% | 94.9\% | 97.0\% | 94.0\% | 95.0\% |
| Schools with Elementary School Grades Only | 98.7\% | 99.6\% | 99.1\% | 98.3\% | 96.6\% | 99.1\% |
| Total | 95.8\% | 94.5\% | 94.0\% | 95.7\% | 93.5\% | 92.1\% |

Data Source: Massachusetts Department of Elementary and Secondary Education.
Note: High School grades include 9, 10, 11, and 12. Middle School grades include 5, 6, 7, and 8. Elementary School grades include $P K, K, 1,2,3$, and 4 .

UMass Donahue Institute Research and Evaluation Group

## Summary

In 2007-2008, 6,599 full-time-equivalent (FTE) math and 5,320 FTE science teachers served the Commonwealth's 962,806 students. Most of these teachers ( $43.1 \%$ for math and $46.6 \%$ for science) were employed at high schools that included only grades 9 through 12. Another $9.9 \%$ of math and $10.7 \%$ of science teachers were employed at schools that included high school as well as middle and/or elementary school grades.

Most STEM teachers (more than 90\% for most schools) were licensed in their teaching assignment and most core academic STEM classes (again, more than $90 \%$ for most schools) were taught by highly qualified teachers. At schools that only included grades 9 through 12, the percentage of math teachers who were licensed in their teaching assignment was higher than the percentage of science teachers, and the percentage of core academic math classes that were taught by a highly qualified teacher was higher than the percentage of core academic science classes.

2007-2008 represents the baseline year for presenting information from the Massachusetts Department of Elementary and Secondary Education's (ESE) new teacher data collection system. As this system develops further we hope to expand our analysis of STEM teachers.

## Technical Notes

Massachusetts data for Indicator 1 were taken from the "Teacher Data Report" section of ESE's School/District Profiles Directory: http://profiles.doe.mass.edu/state report/teacherdata.aspx. ESE collects information on teachers and other school/district staff through its Education Personnel Information Management System (EPIMS). Information on this system can be found at: http://www.doe.mass.edu/infoservices/data/epims/. ESE's definition of a "highly qualified" teacher can be found at: http://www.doe.mass.edu/hclb/hq/hq faq.html?section=all.

At the time this report was written, data were only available for the 2007-2008 school year. Beginning in 2007-2008, ESE changed the way in which it collected teacher data. As a result, teacher data that were presented in earlier MASSIP reports are not comparable to data presented in this report (or to data that will be presented in future MASSIP reports).

The total number of teachers calculated in Indicator 1 only includes teachers whose primary teaching assignment is at a public school. The state also collects data on teachers who serve through collaborative, youth detention, and alternative programs. Teachers in these programs number approximately 198 (with about 13 math and 6 science teachers). Because these teachers could not be matched with a school or grade level, they are not included in this analysis.

Data for Indicator 1 are only reported for Massachusetts as teacher data (whether regarding licensure, teaching assignments, definitions of qualified, or many other issues) are not usually comparable across states. Parties interested in investigating teacher data for MASSIP comparison states may wish to visit the websites for each state's department for K-12 education:

\[

North Carolina
http://www.dpi.state.nc.us/
Pennsylvania
http://www.pde.state.pa.us/
Virginia
http://www.doe.virginia.gov/
Some national data about teachers is also gathered by the National Center for Education Statistics (http://nces.ed.gov/) through its Common Core of Data (http://nces.ed.gov/ccd/) and Schools and Staffing Survey (http://nces.ed.gov/surveys/sass/). Data from these programs are reported in the annual Digest of Education Statistics (http://nces.ed.gov/programs/digest/). However, at the time this report was written, none of these data sources reported specifically on STEM teachers.

## Summary

From 2004 through 2008, a total of 3,705 individuals took the mathematics MTEL test and 2,457 individuals (66\%) passed the test. In general science, 1,654 individuals took the test and 1,342 (81\%) passed. In biology, 1,935 individuals took the test and 1,093 (57\%) passed. In chemistry, 754 individuals took the test and 420 (56\%) passed. In earth science, 500 individuals took the test and 174 (35\%) passed. Lastly, 649 individuals took the physics test and 308 (48\%) passed. First time testtakers had higher passing rates than re-test test-takers on all STEM MTEL tests. General science had the highest passing rate among first time test-takers and the highest passing rate among re-test testtakers. Earth science had the lowest passing rate among first time test-takers and the lowest passing rate among re-test test-takers.

Charts 1 (first time test-takers) and 2 (re-test test-takers) are graphic depictions of the number of people who have taken STEM subject MTEL tests from 2004 to 2008. While the number of first time and re-test test-takers has varied over time for most subjects, two primary trends can be found: (1) the number of first time test-takers of the math test has decreased from 860 in 2004 to 589 in 2008 (a decrease of $32 \%$ ), and (2) the number of re-test test-takers of the biology test has increased from 189 in 2004 to 248 in 2008 (an increase of $31 \%$ ). Two secondary trends are (i) the number of first time testtakers of the earth science test has decreased from 116 in 2004 to 88 in 2008 (a decrease of 24\%), and (ii) the number of re-test test-takers of the chemistry test has increased from 71 in 2004 to 96 in 2008 (an increase of 35\%).

Charts 3 (first time test-takers) and 4 (re-test test-takers) are graphic depictions of the number of people who have passed STEM subject MTEL tests from 2004 to 2008. As with the number of testtakers, the number of people passing has varied over time for most subjects. The primary trend among people passing STEM subject MTEL tests is that the number of first time test-takers passing the math test has decreased from 551 in 2004 to 396 in 2008 (a decrease of 28\%).

Charts 5 (first time test-takers) and 6 (re-test test-takers) are graphic depictions of the percentage of people who have passed STEM subject MTEL tests from 2004 to 2008. Similar to the number of testtakers and passers, the percentage of individuals passing tests varied up and down for most subjects for both first time and re-test test-takers.

## Technical Notes

Massachusetts data for Indicator 2 were taken from the "Summary of Test Results" section (http://www.doe.mass.edu/mtel/results.html) of ESE's webpage for the MTEL: http://www.doe.mass.edu/mtel/.

According to ESE, the purpose of the MTEL is "to help identify candidates for licensure who have demonstrated the knowledge required for entry-level educators in Massachusetts public schools." Passing the MTEL is required to teach in Massachusetts public schools. Private schools in Massachusetts may or may not require passage of the MTEL. All licensure candidates must pass two components of the MTEL: the Communication Skills and Literacy test, and a test of the subject in which they intend to teach.

The MTEL tests were initiated in 1998 and are offered several times during each year. The data presented in tables and charts for MASSIP 2009 Indicator 2 are totals of all the tests within a calendar year for the years 2004 through 2008. It should be noted that it is possible for a single individual to be counted more than once in the data presented here; in particular, an individual who did not pass a subject test on the first try would appear both as a first time test-taker and a re-test test-taker.

Data for Indicator 2 are only reported for Massachusetts as licensure tests (and other licensure requirements) and are not usually comparable across states. Parties interested in investigating teacher
licensure for MASSIP comparison states may wish to visit the websites for each state's department for K-12 education:

| California | http://www.cde.ca.gov/index.asp |

| Pennsylvania | $\underline{\text { http://www.pde.state.pa.us/ }}$ |
| Virginia | $\underline{\text { http://www.doe.virginia.gov/ }}$ |

Some national data about teachers is also gathered by the National Center for Education Statistics (http://nces.ed.gov/) through its Common Core of Data (http://nces.ed.gov/ccd/) and Schools and Staffing Survey (http://nces.ed.gov/surveys/sass/). Data from these programs are reported in the annual Digest of Education Statistics (http://nces.ed.gov/programs/digest). However, at the time this report was written, none of these data sources reported specifically on STEM teachers.

## Indicator 3: Time per week students spend in mathematics instruction

## Summary

In 2007, approximately $91 \%$ of all Massachusetts $4^{\text {th }}$ grade public school students spent at least five hours per week in mathematics instruction. This was slightly higher than the $89 \%$ from 2005. In 2007, approximately the same percentage of female (92\%) and male (91\%) students spent at least five hours per week in mathematics instruction. A higher percentage of Hispanic (97\%) and Black (94\%) students spent at least five hours in mathematics instruction per week than White (91\%) or Asian (87\%) students. In addition, a higher percentage of National School Lunch Program (NSLP) eligible (96\%) students spent at least five hours in mathematics instruction per week than non-NSLP eligible (90\%) students.

In 2007, Massachusetts was tied with California and Connecticut for the highest percentage of $4^{\text {th }}$ grade public school students who spent at least five hours per week in mathematics instruction (91\%). Massachusetts and Connecticut had the highest percentage of female (92\%) and male (91\%) students spending at least 5 hours in math instruction. Massachusetts had the sixth highest percentage of Asian students ( $87 \%$ —New York had the highest at $93 \%$ ), was tied for third highest percentage of Black students ( $94 \%$-New Jersey had the highest at $96 \%$ ), had the highest percentage of Hispanic students (96\%), and had the second highest percentage of White students spending at least five hours in mathematics instruction ( $91 \%$-North Carolina had the highest at $92 \%$ ). Massachusetts had the highest percentage of students eligible for the NSLP who spent at least five hours in mathematics instruction per week (96\%) and the third highest percentage of students not eligible for the NSLP who spent at least five hours in mathematics instruction per week ( $90 \%$ —North Carolina had the highest at $92 \%$ ).

In 2007, approximately $36 \%$ of all Massachusetts $8^{\text {th }}$ grade public school students spent at least five hours per week in mathematics instruction. This was higher than the $26 \%$ from 2005. A higher percentage of female (37\%) students spent at least five hours per week in mathematics instruction than male (35\%) students. A higher percentage of Hispanic (63\%) and Black (54\%) students spent at least five hours in mathematics instruction per week than Asian (43\%) or White (30\%) students. In addition, a higher percentage of NSLP eligible (53\%) students spent at least five hours in mathematics instruction per week than non-NSLP eligible (30\%) students.

In 2007, Massachusetts was tied for the second highest percentage of $8^{\text {th }}$ grade public school students who spent at least five hours per week in mathematics instruction (36\%-North Carolina had the highest at $72 \%$ ). Massachusetts had the second highest percentage of female students (37\%-North Carolina had the highest at 70\%) and fourth highest percentage of male students (35\%-North Carolina had the highest at 73\%) spending at least five hours in math instructions. Massachusetts had the third highest percentage of Asian students (43\%—North Carolina had the highest at 78\%), the fifth highest percentage of Black students (54\%-North Carolina had the highest at 73\%), the third highest percentage of Hispanic students ( $63 \%$-North Carolina had the highest at 73\%), and the third highest percentage of White students spending at least five hours in mathematics instruction (30\%-North Carolina had the highest at 69\%). Massachusetts had the fourth highest percentage of students eligible for the NSLP who spent at least five hours in mathematics instruction per week (53\%-North Carolina had the highest at 75\%) and the third highest percentage of students not eligible for the NSLP who spent at least five hours in mathematics instruction per week ( $30 \%$-North Carolina has the highest at 69\%).

## Technical Notes

The National Assessment of Educational Progress (NAEP) tests, and their surveys about student and teacher educational issues, are administered by the National Center for Education Statistics (NCES-a division of the U.S. Department of Education) every two years in reading and mathematics, and every four years in science, to $4^{\text {th }}, 8^{\text {th }}$, and $12^{\text {th }}$ grade students. However, only data for 4 th and 8 th grade students is available at the state level. The home page for NCES is: http://www.nces.ed.gov/. The home page for NAEP is: http://nces.ed.gov/nationsreportcard/. NAEP administered another round of

UMass Donahue Institute Indicator 3: Time per week students spend in mathematics instruction
reading, mathematics, and science tests/surveys in January, February, and March 2009, the results of which will be available in spring 2010.

The NAEP tests and surveys do not involve all schools in Massachusetts (or in other states) but are generally held to involve a representative sample of public schools in the state. The number of students who participate in the tests each year, and of their teachers who participate in the surveys, is kept confidential by the NCES. National NAEP data also includes a representative sample of private schools which is not available at the state level.

## Summary

Tables for Indicator 4 show the amount of time spent in science instruction by participating $4^{\text {th }}$ grade public school students by state and gender, race/ethnicity, or low-income status, and by participating $8^{\text {th }}$ grade students overall, as reported by their teachers on the 2005 NAEP survey (the most recent data available at the time this report was written).

In 2005, 31\% of Massachusetts $4^{\text {th }}$ grade public school students spent less than 2 hours per week in science instruction. Virginia had the lowest percentage of students at this level at 7\%, while California had the highest at $47 \%$. Thirty-nine percent (39\%) of Massachusetts $4^{\text {th }}$ grade public school students spent 2 to 2.9 hours per week in science instruction. Virginia had the lowest percentage of students at this level at $29 \%$, while Connecticut had the highest at $46 \%$. Twenty-three percent ( $23 \%$ ) of Massachusetts $4^{\text {th }}$ grade public school students spent 3 to 3.9 hours per week in science instruction. California had the lowest percentage of students at this level at $15 \%$, while Illinois had the highest at $42 \%$. Seven percent ( $7 \%$ ) of Massachusetts $4^{\text {th }}$ grade public school students spent 4 or more hours per week in science instruction. California had the lowest percentage of students at this level at 5\%, while Virginia had the highest at $27 \%$.

In 2005, 2\% of Massachusetts $8^{\text {th }}$ grade public school students spent less than 3 hours per week in science instruction. Minnesota had the lowest percentage of students at this level at 1\%, while Illinois and New Jersey had the highest at $7 \%$. Sixty-three percent (63\%) of Massachusetts $8^{\text {th }}$ grade public school students spent 3 to 4.9 hours per week in science instruction. North Carolina had the lowest percentage of students at this level at $34 \%$, while Connecticut had the highest at $72 \%$. Twenty-three percent (23\%) of Massachusetts $8^{\text {th }}$ grade public school students spent 5 to 6.9 hours per week in science instruction. Connecticut had the lowest percentage of students at this level at $14 \%$, while North Carolina had the highest at $31 \%$. Eleven percent (11\%) of Massachusetts $8^{\text {th }}$ grade public school students spent 7 or more hours per week in science instruction, the lowest percentage at this level, while North Carolina had the highest at $28 \%$.

## Technical Notes

The National Assessment of Educational Progress (NAEP) tests, and their surveys about student and teacher educational issues, are administered by the National Center for Education Statistics (NCES-a division of the U.S. Department of Education) every two years in reading and mathematics, and every four years in science, to $4^{\text {th }}, 8^{\text {th }}$, and $12^{\text {th }}$ grade students. However, only data for $4^{\text {th }}$ and $8^{\text {th }}$ grade students is available at the state level. The home page for NCES is: http://www.nces.ed.gov/. The home page for NAEP is: http://nces.ed.gov/nationsreportcard/. NAEP administered another round of reading, mathematics, and science tests/surveys in January, February, and March 2009, the results of which will be available in spring 2010.

The NAEP tests and surveys do not involve all schools in Massachusetts (or in other states) but are generally held to involve a representative sample of public schools in the state. The number of students who participate in the tests each year, and of their teachers who participate in the surveys, is kept confidential by the NCES. National NAEP data also includes a representative sample of private schools which is not available at the state level.

## Summary

It should be noted that the percentage of students who take the SAT in Illinois or Minnesota is lower than the percentage in Massachusetts or other comparison states (the ACT is the dominant test in Minnesota and Illinois). Also, the scores for students in Illinois and Minnesota are higher than those for students in Massachusetts or other comparison states. It is theorized that SAT-taking students in Illinois and Minnesota may be higher achievers who intend to apply to out-of-state colleges, while most in-state college-bound students take only the ACT. In contrast, the majority of all college-bound students in Massachusetts and other comparison states take the SAT, regardless of academic status or college location. Because of these differences, Illinois and Minnesota are excluded from our analysis of SAT-based data in this, and other, indicators (though their data are still reported in the tables because of their status as economic competitors), and Massachusetts is compared only to the seven remaining states.

In 2008, 26.5\% of all respondents to the SAT question about math course-taking in Massachusetts reported taking calculus as their highest math course in high school. This was lower than the national average (27.3\%) but second highest among the states included in this analysis (Pennsylvania had the highest percentage at 27.4\%). A lower percentage of Massachusetts female respondents (24.6\%) reported taking calculus as their highest math course in high school than male respondents (28.8\%). This pattern held true nationally and for all comparison states. The percentage of female respondents in Massachusetts who reported taking calculus as their highest math course was lower than the national average (24.8\%) but second highest among the states included in this analysis (Pennsylvania had the highest percentage at 25.0\%). The percentage of male respondents in Massachusetts who reported taking calculus as their highest math course was also lower than the national average (30.3\%) but third highest among the states included in this analysis (Pennsylvania had the highest percentage at $30.4 \%$ ).

In 2008, 29.5\% of all respondents to the SAT question about math course-taking in Massachusetts reported taking pre-calculus as their highest math course in high school. This was higher than the national average (28.1\%) and third highest among the states included in this analysis (Connecticut had the highest percentage at 32.5\%). A higher percentage of Massachusetts female respondents (30.6\%) reported taking pre-calculus as their highest math course in high school than male respondents (28.2\%). This pattern held true nationally and for all comparison states. The percentage of female respondents in Massachusetts who reported taking pre-calculus as their highest math course was higher than the national average (30.6\%) and third highest among the states included in this analysis (Connecticut had the highest percentage at 33.7\%). The percentage of male respondents in Massachusetts who reported taking pre-calculus as their highest math course was also higher than the national average (26.8\%) and third highest among the states included in this analysis (Connecticut had the highest percentage at 31.0\%).

In 2008, 29.0\% of all respondents to the SAT question about math course-taking in Massachusetts reported taking algebra II as their highest math course in high school. This was higher than the national average (28.6\%) and the sixth highest among the states included in this analysis (North Carolina had the highest percentage at 37.8\%). A higher percentage of Massachusetts female respondents (29.6\%) reported taking algebra II as their highest math course in high school than male respondents (28.4\%). This pattern held true nationally and for all comparison states. The percentage of female respondents in Massachusetts who reported taking algebra II as their highest math course was higher than the national average (29.7\%) and sixth highest among the states included in this analysis (North Carolina had the highest percentage at $38.7 \%$ ). The percentage of male respondents in Massachusetts who reported taking algebra II as their highest math course was also higher than the national average (27.4\%) and sixth highest among the states included in this analysis (North Carolina had the highest percentage at 36.6\%).

In 2008, 31.3\% of all respondents to the SAT question about math course-taking in Massachusetts reported taking an honors or Advanced Placement course in high school. This was lower than the

UMass Donahue Institute
Indicator 5: Highest mathematics course students take during
high school
national average (32.9\%) but tied for the third highest among the states included in this analysis (North Carolina had the highest percentage at 46.2\%). A lower percentage of Massachusetts female respondents (30.7\%) reported taking an honors or Advanced Placement course in high school than male respondents (31.9\%). This pattern held true nationally and for all comparison states except North Carolina. The percentage of female respondents in Massachusetts who reported taking an honors or Advanced Placement course was lower than the national average (32.3\%) but third highest among the states included in this analysis (North Carolina had the highest percentage at 46.4\%). The percentage of male respondents in Massachusetts who reported taking an honors or Advanced Placement course was also lower than the national average (33.6\%) and fourth highest among the states included in this analysis (North Carolina had the highest percentage at 45.8\%).

## Technical Notes

The SAT is a national, standardized test that measures students' skills in critical reading, mathematics, and writing. It is the primary test taken by students planning to enter college. The SAT has an associated survey where students give information about high school course-taking, grades, plans for college, and other data. Percentages reported for Indicator 5 are based on the number of respondents to the question about mathematics course-taking in the SAT registration questionnaire as opposed to the total number of test-takers.

As noted in the General Technical Notes, this indicator has been revised from previous editions of the Massachusetts Statewide STEM Indicators Project (MASSIP). This is a result of a change in data reporting by the College Board. Prior to 2008, the "College Bound Seniors" reports tabulated the number of test-takers who took each kind of mathematics course (resulting in a list where each testtaker was represented multiple times: once for every course she reported taking). Beginning in 2008, the College Board modified this tabulation to include only the highest mathematics course each testtaker reported taking (resulting in a list where each test-taker is represented only once). The following was the note attached to the revised mathematics course-taking table in the 2008 "College Bound Seniors" reports:

> To better reflect the relationship between students' SAT scores and their Mathematics course work, course work is now being displayed as the highest level of mathematics achieved. This means that each student is counted only once under their highest level of mathematics course taken.

Consequently, our Indicator 5 has been changed from the "Mathematics courses students take during high school" that was included in previous MASSIP reports to "Highest mathematics course students take during high school."

The home page for The College Board is: http://www.collegeboard.com/. The website from which all College Board public reports and research can be accessed is:
http://professionals.collegeboard.com/data-reports-research. Finally, the website for the 2008 "College
Bound Seniors" reports (the most recent ones at the time this report was written) is: http://professionals.collegeboard.com/data-reports-research/sat/cb-seniors-2008.

## Summary

It should be noted that the percentage of students who take the SAT in Illinois or Minnesota is lower than the percentage in Massachusetts or other comparison states (the ACT is the dominant test in Minnesota and Illinois). Also, the scores for students in Illinois and Minnesota are higher than those for students in Massachusetts or other comparison states. It is theorized that SAT-taking students in Illinois and Minnesota may be higher achievers who intend to apply to out-of-state colleges, while most in-state college-bound students take only the ACT. In contrast, the majority of all college-bound students in Massachusetts and other comparison states take the SAT, regardless of academic status or college location. Because of these differences, Illinois and Minnesota are excluded from our analysis of SAT-based data in this, and other, indicators (though their data are still reported in the tables because of their status as economic competitors), and Massachusetts is compared only to the seven remaining states.

In 2008, 94.2\% of all respondents to the SAT question about science course-taking in Massachusetts reported taking biology in high school. This was lower than the national average ( $95.0 \%$ ) and seventh highest among the states included in this analysis (North Carolina had the highest percentage at 98.1\%). A higher percentage of Massachusetts female respondents (96.8\%) reported taking biology in high school than male respondents (91.7\%). This pattern held true nationally and for all comparison states except California. The percentage of female respondents in Massachusetts who reported taking biology was higher than the national average (96.0\%) and fifth highest among the states included in this analysis (North Carolina had the highest percentage at 98.9\%). The percentage of male respondents in Massachusetts who reported taking biology was lower than the national average (93.9\%) and seventh highest among the states included in this analysis (California had the highest percentage at 97.4\%).

In 2008, 88.0\% of all respondents to the SAT question about science course-taking in Massachusetts reported taking chemistry in high school. This was higher than the national average (87.2\%) and fourth highest among the states included in this analysis (Pennsylvania had the highest percentage at 90.0\%). A higher percentage of Massachusetts female respondents (90.5\%) reported taking chemistry in high school than male respondents (85.8\%). This pattern held true nationally and for all comparison states. The percentage of female respondents in Massachusetts who reported taking chemistry was higher than the national average (88.1\%) and second highest among the states included in this analysis (Pennsylvania had the highest percentage at 91.3\%). The percentage of male respondents in Massachusetts who reported taking chemistry was lower than the national average (86.2\%) and fifth highest among the states included in this analysis (Pennsylvania had the highest percentage at 88.5\%).

In 2008, 57.2\% of all respondents to the SAT question about science course-taking in Massachusetts reported taking physics in high school. This was higher than the national average (51.3\%) and the highest among the states included in this analysis. A lower percentage of Massachusetts female respondents (53.4\%) reported taking physics in high school than male respondents (61.9\%). This pattern held true nationally and for all comparison states. The percentage of female respondents in Massachusetts who reported taking physics was higher than the national average (47.1\%) and the highest among the states included in this analysis. The percentage of male respondents in Massachusetts who reported taking physics was also higher than the national average (56.3\%) and the highest among the states included in this analysis.

In 2008, 45.5\% of all respondents to the SAT question about science course-taking in Massachusetts reported taking geology, earth, or space science in high school. This was lower than the national average (48.1\%) and seventh highest among the states included in this analysis (North Carolina had the highest percentage at $85.3 \%$ ). A higher percentage of Massachusetts female respondents (45.9\%) reported taking geology, earth, or space science in high school than male respondents (45.3\%). This pattern was mixed nationally and among the comparison states. The percentage of female respondents in Massachusetts who reported taking geology, earth, or space science was lower than the national average (47.7\%) and seventh highest among the states included in this analysis (North

Carolina had the highest percentage at $86.0 \%$ ). The percentage of male respondents in Massachusetts who reported taking geology, earth, or space science was also lower than the national average (48.5\%) and seventh highest among the states included in this analysis (North Carolina had the highest percentage at 84.4\%).

In 2008, 31.1\% of all respondents to the SAT question about science course-taking in Massachusetts reported taking an honors or Advanced Placement course in high school. This was the same as the national average (31.1\%) and third highest among the states included in this analysis (North Carolina had the highest percentage at $48.3 \%$ ). A higher percentage of Massachusetts female respondents (32.5\%) reported taking an honors or Advanced Placement course in high school than male respondents (29.6\%). This pattern held true nationally and for all comparison states except California. The percentage of female respondents in Massachusetts who reported taking an honors or Advanced Placement course was higher than the national average (31.9\%) and third highest among the states included in this analysis (North Carolina had the highest percentage at 50.4\%). The percentage of male respondents in Massachusetts who reported taking an honors or Advanced Placement course was lower than the national average (30.0\%) and third highest among the states included in this analysis (North Carolina had the highest percentage at 45.6\%).

## Technical Notes

The SAT is a national, standardized test that measures students' skills in critical reading, mathematics, and writing. It is the primary test taken by students planning to enter college. The SAT has an associated survey where students give information about high school course-taking, grades, plans for college, and other data. Percentages reported for Indicator 6 are based on the number of respondents to the question about science course-taking in the SAT registration questionnaire as opposed to the total number of test-takers.

## Summary

$4^{\text {th }}$ Grade: In 2008, 49\% of $4^{\text {th }}$ graders scored Advanced or Proficient (compared to $48 \%$ in 2007) on the Massachusetts Comprehensive Assessment System (MCAS), 38\% scored Needs Improvement (compared to $38 \%$ in 2007), and 13\% scored Warning (same as in 2007). In 2008 female students performed better on the $4^{\text {th }}$ grade math MCAS than male students: $51 \%$ of females and $48 \%$ of males scored Advanced or Proficient. The percentage of Asian students who scored Advanced or Proficient increased from $63 \%$ in 2007 to $66 \%$ in 2008, the percentage of Black students increased from $23 \%$ to $26 \%$, the percentage of Hispanic students increased from $24 \%$ to $28 \%$, and the percentage of White students increased from $54 \%$ to $56 \%$. At the other end of the performance levels, $26 \%$ of Black and $27 \%$ of Hispanic students scored Warning compared to $7 \%$ of Asian and $9 \%$ of White students. Score differences also existed between income groups in 2008: 29\% of low-income students scored Advanced or Proficient (24\% scored Warning), while 58\% of non-low-income students scored Advanced or Proficient (8\% scored Warning).
$8^{\text {th }}$ Grade: In 2008, 49\% of $8^{\text {th }}$ graders scored Advanced or Proficient (compared to $45 \%$ in 2007), 27\% scored Needs Improvement (compared to $30 \%$ in 2007), and $24 \%$ scored Warning (compared to $25 \%$ in 2007). In 2008, female students performed the same on the $8^{\text {th }}$ grade math MCAS as male: $49 \%$ of both females and males scored Advanced or Proficient. The percentage of Asian students who scored Advanced or Proficient increased from $65 \%$ in 2007 to $68 \%$ in 2008, the percentage of Black students increased from 19\% to $24 \%$, the percentage of Hispanic students increased from $18 \%$ to $22 \%$, and the percentage of White students increased from $52 \%$ to $56 \%$. At the other end of the performance levels, $46 \%$ of Black and $50 \%$ of Hispanic students scored Warning compared to $13 \%$ of Asian and $17 \%$ of White students. Score differences also existed between income groups in 2008: 25\% of low-income students scored Advanced or Proficient ( $45 \%$ scored Warning), while 60\% of non-low-income students scored Advanced or Proficient ( $15 \%$ scored Warning).
$10^{\text {th }}$ Grade: In 2008, $72 \%$ of $10^{\text {th }}$ graders scored Advanced or Proficient (compared to $69 \%$ in 2007), $19 \%$ scored Needs Improvement (compared to $22 \%$ in 2007), and $9 \%$ scored Failing (same as in 2007). In 2008, female students performed slightly lower on the $10^{\text {th }}$ grade math MCAS than male: $71 \%$ of females and $72 \%$ of males scored Advanced or Proficient. The percentage of Asian students who scored Advanced or Proficient increased from $82 \%$ in 2007 to $85 \%$ in 2008, the percentage of Black students increased from 45\% to 48\%, the percentage of Hispanic students increased from 42\% to $46 \%$, and the percentage of White students increased from $75 \%$ to $78 \%$. At the other end of the performance levels, 19\% of Black and 23\% of Hispanic students scored Failing compared to $4 \%$ of Asian and 6\% of White students. Score differences also existed between income groups in 2008: 51\% of low-income students scored Advanced or Proficient (18\% scored Failing), while $78 \%$ of non-lowincome students scored Advanced or Proficient (5\% scored Failing).

## Technical Notes

Massachusetts data for Indicator 7 were taken from the "MCAS Results" section (http://www.doe.mass.edu/mcas/results.html) of ESE's website for the MCAS: http://www.doe.mass.edu/mcas/.

According to the ESE, the MCAS is "designed to meet the requirements of the Education Reform Law of 1993. This law specifies that the testing program must: test all public school students in Massachusetts, including students with disabilities and limited English proficient students; measure performance based on the Massachusetts Curriculum Framework learning standards; report on the performance of individual students, schools, and districts."

The Massachusetts Comprehensive Assessment System (MCAS) exams were implemented in 1998 to measure how well public school students were attaining learning standards outlined in the Massachusetts Curriculum Frameworks (MCF), as required by the Education Reform Law of 1993. The

UMass Donahue Institute Research and Evaluation Group

MCF defined content to be covered at each grade level, in every subject, for public schools. Testing was introduced in the $4^{\text {th }}, 8^{\text {th }}$, and $10^{\text {th }}$ grades and has expanded to include the $3^{\text {td }}, 5^{\text {th }}, 6^{\text {th }}$, and $7^{\text {th }}$ grades, with each subject tested at multiple grade levels. With the class of 2003, passing the English language arts and mathematics exams became required for graduation from a public high school. With the class of 2010, passing a science exam will also be required for graduation.

Mathematics testing does occur in grades other than $4^{\text {th }}, 8^{\text {th }}$, and $10^{\text {th }}$. We focus on testing in these years because they represent key transition points within primary and secondary schooling: $4^{\text {th }}$ grade as the completion of elementary school, $8^{\text {th }}$ grade as the completion of middle school, and $10^{\text {th }}$ grade as the completion of one requirement for high school graduation.

Achievement on MCAS exams is divided into four "performance levels": (1) Advanced: "comprehensive and in-depth understanding of rigorous subject matter ... sophisticated solutions to complex problems";
(2) Proficient: "solid understanding of challenging subject matter ... solve a wide variety of problems";
(3) Needs Improvement: "partial understanding of subject matter ... solve some simple problems"; and
(4) Warning ( $3^{\text {rd }}-8^{\text {th }}$ grades) or Failing $\left(10^{\text {th }}\right)$ : "minimal understanding of subject matter $\ldots$ do not solve simple problems." "Passing" an exam is scoring Needs Improvement or higher.

Data for Indicator 7 are only reported for Massachusetts as student tests are not usually comparable across states. Parties interested in investigating state student tests for MASSIP comparison states may wish to visit the websites for each state's department for K -12 education:

## Summary

$5^{\text {th }}$ Grade: In 2008, 50\% of $5^{\text {th }}$ graders scored Advanced or Proficient (compared to $51 \%$ in 2007), 38\% scored Needs Improvement (compared to $37 \%$ in 2007), and $12 \%$ scored Warning (same as in 2007). In 2008, female students performed less well on the $5^{\text {th }}$ grade science MCAS than male students: $48 \%$ of females and $51 \%$ of males scored Advanced or Proficient. The percentage of Asian students who scored Advanced or Proficient decreased from 59\% in 2007 to $56 \%$ in 2008, the percentage of Black students decreased from 20\% to 19\%, the percentage of Hispanic students decreased from 20\% to $19 \%$, and the percentage of White students decreased from $59 \%$ to $58 \%$. At the other end of the performance levels, $31 \%$ of Black and $31 \%$ of Hispanic students scored Warning, compared to $10 \%$ of Asian and 7\% of White students. Score differences also existed between income groups in 2008: 23\% of low-income students scored Advanced or Proficient ( $26 \%$ scored Warning), while $61 \%$ of non-lowincome students scored Advanced or Proficient (6\% scored Warning).
$8^{\text {th }}$ Grade: In 2008, 39\% of $8^{\text {th }}$ graders scored Advanced or Proficient (compared to $33 \%$ in 2007), 39\% scored Needs Improvement (compared to $44 \%$ in 2007), and $22 \%$ scored Warning (compared to $24 \%$ in 2007). In 2008, female students performed less well on the $8^{\text {th }}$ grade science MCAS than male: $37 \%$ of females and $41 \%$ of males scored Advanced or Proficient. The percentage of Asian students who scored Advanced or Proficient increased from $43 \%$ in 2007 to $49 \%$ in 2008, the percentage of Black students increased from $8 \%$ to $11 \%$, the percentage of Hispanic students increased from $7 \%$ to $11 \%$, and the percentage of White students increased from $39 \%$ to $47 \%$. At the other end of the performance levels, $48 \%$ of Black and $52 \%$ of Hispanic students scored Warning, compared to $18 \%$ of Asian and 13\% of White students. Score difference also existed between income groups in 2008: 14\% of low-income students scored Advanced or Proficient (45\% scored Warning) while 49\% of non-lowincome students scored Advanced or Proficient (12\% scored Warning).
$10^{\text {th }}$ Grade: In 2008, $57 \%$ of $10^{\text {th }}$ graders scored Advanced or Proficient, $31 \%$ scored Needs Improvement, and $12 \%$ scored Failing. In 2008, female students performed the same on the $10^{\text {th }}$ grade science MCAS as male students: both $57 \%$ of females and males scored Advanced or Proficient. The percentage of Asian students who scored Advanced or Proficient was $68 \%$ in 2008, the percentage of Black students was $28 \%$, the percentage of Hispanic students was $24 \%$, and the percentage of White students was $65 \%$. At the other end of the performance levels, $27 \%$ of Black and $32 \%$ of Hispanic students scored Failing, compared to $8 \%$ of Asian and $7 \%$ of White students. Score difference also existed between income groups in 2008: 31\% of low-income students scored Advanced or Proficient
( $26 \%$ scored Failing), while $66 \%$ of non-low-income students scored Advanced or Proficient (7\% scored Failing).

## Technical Notes

Massachusetts data for Indicator 8 were taken from the "MCAS Results" section (http://www.doe.mass.edu/mcas/results.html) of ESE's website for the MCAS: http://www.doe.mass.edu/mcas/. While science tests have been given in years before 2008 for the $10^{\text {th }}$ grade, the tests and, consequently, their results, are not comparable. As a result, scores from these years are not presented here.

According to ESE, the MCAS is "designed to meet the requirements of the Education Reform Law of 1993. This law specifies that the testing program must: test all public school students in Massachusetts, including students with disabilities and limited English proficient students; measure performance based on the Massachusetts Curriculum Framework learning standards; report on the performance of individual students, schools, and districts."

The MCAS exams were implemented in 1998 to measure how well public school students were attaining learning standards outlined in the Massachusetts Curriculum Frameworks (MCF), as required by the Education Reform Law of 1993. The MCF define content to be covered at each grade level, in every subject, for public schools. Testing was introduced in the $4^{\text {th }}, 8^{\text {th }}$, and $10^{\text {th }}$ grades and has expanded to include the $3^{\text {rd }}, 5^{\text {th }}, 6^{\text {th }}$, and $7^{\text {th }}$ grades with each subject tested at multiple grade levels. With the class of 2003, passing the English language arts and Mathematics exams became required for graduation from a public high school. With the class of 2010, passing a science exam will also be required for graduation.

Achievement on MCAS exams is divided into four "performance levels": (1) Advanced: "comprehensive and in-depth understanding of rigorous subject matter ... sophisticated solutions to complex problems"; (2) Proficient: "solid understanding of challenging subject matter ... solve a wide variety of problems"; (3) Needs Improvement: "partial understanding of subject matter ... solve some simple problems"; and (4) Warning ( $3^{\text {rd }}-8^{\text {th }}$ grades) or Failing $\left(10^{\text {th }}\right)$ : "minimal understanding of subject matter $\ldots$ do not solve simple problems." "Passing" an exam is scoring Needs Improvement or higher.

Data for Indicator 8 are only reported for Massachusetts as student tests are not usually comparable across states. Parties interested in investigating state student tests for MASSIP comparison states may wish to visit the websites for each state's department for K-12 education:

## Summary

$4^{\text {th }}$ Grade: In 2007, Massachusetts' $4^{\text {th }}$ grade students scored an average of 247 on the National Assessment of Educational Progress (NAEP) mathematics test (the same as in 2005). This was higher than the national average (239) and tied for second highest among the comparison states (New Jersey had the highest average score at 249). Massachusetts' female students scored an average of 247 (the same as in 2005). This was higher than the national average (238) and tied for the highest score among the comparison states. Massachusetts' male students scored an average of 248 (the same as in 2005). This was higher than the national average (240) and third highest among the comparison states (New Jersey had the highest average score at 250). Asian and White students scored higher than the average for all students in Massachusetts, nationally, and in eight of the nine comparison states (Asian students scored lower than the average for all students in Minnesota). Black and Hispanic students scored lower than the average for all students in Massachusetts, nationally, and in all nine of the comparison states. Students who were eligible for the National School Lunch Program (NSLP) scored lower than the average for all students in Massachusetts, nationally, and in all nine of the comparison states, while students who were not eligible for the NSLP scored higher than the average for all students in Massachusetts, nationally, and in all nine of the comparison states.
$8^{\text {th }}$ Grade: In 2007, Massachusetts' $8^{\text {th }}$ grade students scored an average of 292 on the National Assessment of Educational Progress (NAEP) mathematics test (the same as in 2005). This was higher than the national average (281) and tied for the highest among the comparison states. Massachusetts' female students scored an average of 292 (the same as in 2005). This was higher than the national average (279) and tied for the highest score among the comparison states. Massachusetts' male students scored an average of 291 (the same as in 2005). This was higher than the national average (281) and second highest among the comparison states (Minnesota had the highest average score at 292). Asian and White students scored higher than the average for all students in Massachusetts, nationally, and in eight of the nine comparison states (Asian students scored lower than the average for all students in Minnesota). Black and Hispanic students scored lower than the average for all students in Massachusetts, nationally, and in all nine of the comparison states. Students who were eligible for the National School Lunch Program (NSLP) scored lower than the average for all students in Massachusetts, nationally, and in all nine of the comparison states while students who were not eligible for the NSLP scored higher than the average for all students in Massachusetts, nationally, and in all nine of the comparison states.

## Technical Notes

The NAEP tests, and their surveys about student and teacher educational issues, are administered by the National Center for Education Statistics (NCES - a division of the U.S. Department of Education) every two years in reading and mathematics, and every four years in science, to $4^{\text {th }}, 8^{\text {th }}$, and $12^{\text {th }}$ grade students. However, only data for $4^{\text {th }}$ and $8^{\text {th }}$ grade students is available at the state level. The home page for NCES is: http://www.nces.ed.gov/. The home page for NAEP is: http://nces.ed.gov/nationsreportcard/. NAEP administered another round of reading, mathematics, and science tests/surveys in January, February, and March 2009, the results of which will be available in spring 2010.

The NAEP tests and surveys do not involve all schools in Massachusetts (or in other states) but are generally held to involve a representative sample of public schools in the state. The number of students who participate in the tests each year, and of their teachers who participate in the surveys, is kept confidential by the NCES. National NAEP data also includes a representative sample of private schools which is not available at the state level.

## Summary

It should be noted that the percentage of students who take the PSAT in Illinois or Minnesota is lower than the percentage in Massachusetts or other comparison states (the preliminary tests leading up to the ACT are dominant in Minnesota and Illinois). Also, the scores for students in Illinois and Minnesota are higher than those for students in Massachusetts or other comparison states. It is theorized that PSAT-taking students in Illinois and Minnesota may be higher achievers who intend to apply to out-ofstate colleges, or who plan to apply for National Merit Scholarships. In contrast, the majority of all college-bound students in Massachusetts and other comparison states take the PSAT, regardless of academic status or college location. Because of these differences, Illinois and Minnesota are excluded from our analysis of PSAT-based data in this, and other, indicators (though their data are still reported in the tables because of their status as economic competitors), and Massachusetts is compared only to the seven remaining states.

In 2008, the average math score for all junior PSAT test-takers in Massachusetts was 50.0 (down from 50.3 in 2007). This was higher than the national average of 48.2 (down from 48.5 in 2007) and all seven of the comparison states. In 2008, the average math score for female junior PSAT test-takers in Massachusetts was 48.7 (down from 48.9 in 2007). This was higher than the national average of 47.0 (down from 47.4 in 2007) and all seven of the comparison states. In 2008, the average math score for male junior PSAT test-takers in Massachusetts was 51.6 (down from 51.8 in 2007). This was higher than the national average of 49.7 (down from 49.9 in 2007) and all seven of the comparison states.

In 2008, the average math score for all sophomore PSAT test-takers in Massachusetts was 46.2 (down from 46.8 in 2007). This was higher than the national average of 43.1 (down from 43.5 in 2007) and all seven of the comparison states. In 2008, the average math score for female sophomore PSAT testtakers in Massachusetts was 45.3 (down from 46.0 in 2007). This was higher than the national average of 42.4 (down from 42.9 in 2007) and all seven of the comparison states. In 2008, the average math score for male sophomore PSAT test-takers in Massachusetts was 47.3 (down from 47.6 in 2007). This was higher than the national average of 43.9 (down from 44.1 in 2007) and all seven of the comparison states.

## Technical Notes

The PSAT/NMSQT (Preliminary SAT/National Merit Scholarship Qualifying Test) is jointly sponsored by the College Board and the National Merit Scholarship Corporation and may be taken by students during their sophomore or junior year of high school. In addition to helping students prepare for the SAT, participation in the PSAT enables students to access the National Merit Scholarship Corporation's scholarships. The PSAT is a national standardized test that measures students' skills in critical reading, mathematics, and writing. It is a preliminary test taken by students planning to enter college. The PSAT has an associated survey where students give information about grades, plans for college, and other data.

The home page for The College Board is: http://www.collegeboard.com/. The website from which all College Board public reports and research can be accessed is: http://professionals.collegeboard.com/data-reports-research. Finally, the website for the 2008 "College Bound Sophomores and Juniors" reports (the most recent ones at the time this report was written) is http://professionals.collegeboard.com/data-reports-research/psat/cb-jr-soph.

## Summary

It should be noted that the percentage of students who take the SAT in Illinois or Minnesota is lower than the percentage in Massachusetts or other comparison states (the ACT is the dominant test in Minnesota and Illinois). Also, the scores for students in Illinois and Minnesota are higher than those for students in Massachusetts or other comparison states. It is theorized that SAT-taking students in Illinois and Minnesota may be higher achievers who intend to apply to out-of-state colleges, while most in-state college-bound students take only the ACT. In contrast, the majority of all college-bound students in Massachusetts and other comparison states take the SAT, regardless of academic status or college location. Because of these differences, Illinois and Minnesota are excluded from our analysis of SAT-based data in this, and other, indicators (though their data are still reported in the tables because of their status as economic competitors), and Massachusetts is compared only to the seven remaining states.

In 2008, the average math score for all SAT test-takers from Massachusetts was 525. This was higher than the national average for all test-takers (515) and higher than all of the comparison states for this indicator. The average math score in 2008 for female SAT test-takers from Massachusetts was 508. This was higher than the national average for female test-takers (500) and higher than all of the comparison states. The average math score in 2008 for male SAT test-takers from Massachusetts was 544. This was higher than the national average for male test-takers (533) and higher than all of the comparison states.

In 2008, the average math score for Asian SAT test-takers from Massachusetts was 585. This was higher than the national average for Asian test-takers (581) and higher than five of the comparison states (New Jersey had the highest average score at 591). The average math score in 2008 for Black SAT test-takers from Massachusetts was 431. This was higher than the national average for Black testtakers (426) and tied for highest among the comparison states (with North Carolina). The average math score in 2008 for Hispanic SAT test-takers from Massachusetts was 449. This was lower than the national average for Hispanic test-takers (462) and lower than four of the comparison states (North Carolina had the highest average score at 489). The average math score in 2008 for White SAT testtakers from Massachusetts was 537. This was tied with the national average for White test-takers (537) and higher than five of the comparison states (California had the highest average score at 549).

In 2008, the average math score for SAT test-takers with family incomes less than \$40,000 from Massachusetts was 464. This was lower than the national average for test-takers with family incomes less than $\$ 40,000$ (466) but higher than all of the comparison states. The average math score in 2008 for SAT test-takers with family incomes more than $\$ 100,000$ from Massachusetts was 547 . This was higher than the national average for test-takers with family incomes more than $\$ 100,000$ (545) and higher than all of the comparison states. The average math score in 2008 for SAT public school testtakers from Massachusetts was 520. This was higher than the national average for public school testtakers (510) and higher than all of the comparison states.

In 2008, the average math score for female SAT test-takers from Massachusetts was 17 points lower than the average for all test-takers. This was more than the difference between female and all testtakers nationally (15 points lower) and more than the difference in six of the comparison states (in California the average score for female test-takers was 18 points lower than the average for all testtakers). The average math score in 2008 for male SAT test-takers from Massachusetts was 19 points higher than the average for all test-takers. This was more than the difference between male and all test-takers nationally (18 points higher) and more than the difference in five of the comparison states (in California the average score for male test-takers was 22 points higher than the average for all testtakers).

In 2008, the average math score for Asian SAT test-takers from Massachusetts was 60 points higher than the average for all test-takers. This was less than the difference between Asian and all test-takers nationally (66 points higher) and less than the difference in four of the comparison states (in New

UMass Donahue Institute
Indicator 11: Number of students taking the SAT and their scores in mathematics

Jersey the average score for Asian test-takers was 78 points higher than the average for all testtakers). The average math score in 2008 for Black SAT test-takers from Massachusetts was 94 points lower than the average for all test-takers. This was more than the difference between Black and all test-takers nationally (89 points lower) and more than the difference in four of the comparison states (in Connecticut the average score for Black test-takers was 106 points lower than the average for all testtakers). The average math score in 2008 for Hispanic SAT test-takers from Massachusetts was 76 points lower than the average for all test-takers. This was more than the difference between Hispanic and all test-takers nationally (53 points lower) and more than the difference in all of the comparison states. The average math score in 2008 for White SAT test-takers from Massachusetts was 12 points higher than the average for all test-takers. This was less than the difference between White and all test-takers nationally ( 22 points higher) and less than the difference in all of the comparison states.

In 2008, the average math score for SAT test-takers with family incomes less than $\$ 40,000$ from Massachusetts was 61 points lower than the average for all test-takers. This was more than the difference between test-takers with family incomes less than \$40,000 and all test-takers nationally (49 points lower) and more than the difference in five of the comparison states (in Connecticut the average score for test-takers with family incomes less than $\$ 40,000$ was 72 points lower than the average for all test-takers). The average math score in 2008 for SAT test-takers with family incomes more than $\$ 100,000$ from Massachusetts was 22 points higher than the average for all test-takers. This was less than the difference between test-takers with family incomes more than \$100,000 and all test-takers nationally ( 30 points higher) and less than the difference in all of the comparison states (in Pennsylvania the average score for test-takers with family incomes more than $\$ 100,000$ was 35 points higher than the average for all test-takers).

## Technical Notes

The SAT is a national standardized test that measures students' skills in critical reading, mathematics, and writing. It is the primary test taken by students planning to enter college. The home page for The College Board is: http://www.collegeboard.com/. The website from which all College Board public reports and research can be accessed is: http://professionals.collegeboard.com/data-reports-research. The website for the 2008 "College Bound Seniors" reports (the most recent ones at the time this report was written) is: http://professionals.collegeboard.com/data-reports-research/sat/cb-seniors-2008.

## Summary

In 2008, $72.0 \%$ of all Massachusetts takers of the Advanced Placement Calculus AB test scored a three or higher. This was higher than the national percentage for all test-takers ( $60.6 \%$ ) and higher than the percentage in eight of the comparison states (Connecticut had the highest percentage at 76.9\%). 68.9\% of female Massachusetts AP Calculus AB takers scored a three or higher. This was higher than the national percentage for female test-takers (57.0\%) and higher than the percentage in eight of the comparison states (Connecticut had the highest percentage at 75.0\%). 74.7\% of male Massachusetts AP Calculus AB takers scored a three or higher. This was higher than the national percentage for male test-takers (64.1\%) and higher than the percentage in eight of the comparison states (Connecticut had the highest percentage at 78.5\%). 75.2\% of Asian Massachusetts AP Calculus $A B$ test-takers scored a three or higher. This was higher than the national percentage for Asian testtakers (66.2\%) and higher than the percentage in eight of the comparison states (Connecticut had the highest percentage at $80.7 \%$ ). $37.6 \%$ of Black Massachusetts AP Calculus AB takers scored a three or higher. This was higher than the national percentage for Black test-takers (30.4\%) but lower than the percentage in five of the comparison states (Connecticut had the highest percentage at 42.6\%). 43.4\% of Hispanic Massachusetts AP Calculus AB takers scored a three or higher. This was higher than the national percentage for Hispanic test-takers (38.7\%) but lower than the percentage in five of the comparison states (Virginia had the highest percentage at 55.3\%). 74.1\% of White Massachusetts AP Calculus $A B$ takers scored a three or higher. This was higher than the national percentage for White test-takers (64.7\%) and higher than the percentage in eight of the comparison states (Connecticut had the highest percentage at 79.4\%). 71.1\% of public school Massachusetts AP Calculus BC takers scored a three or higher. This was higher than the national percentage for public school test-takers $(59.4 \%)$ and higher than the percentage in eight of the comparison states (Connecticut had the highest percentage at 75.6\%).

In 2008, 87.9\% of all Massachusetts takers of the Advanced Placement Calculus BC test scored a three or higher. This was higher than the national percentage for all test-takers (79.9\%) and higher than the percentage in eight of the comparison states (Connecticut had the highest percentage at 88.8\%). 84.3\% of female Massachusetts AP Calculus BC takers scored a three or higher. This was higher than the national percentage for female test-takers (75.8\%) and higher than the percentage in eight of the comparison states (Connecticut had the highest percentage at 90.0\%). 90.1\% of male Massachusetts AP Calculus BC takers scored a three or higher. This was higher than the national percentage for male test-takers ( $82.8 \%$ ) and higher than the percentage in all of the comparison states. $89.8 \%$ of Asian Massachusetts AP Calculus BC takers scored a three or higher. This was higher than the national percentage for Asian test-takers (82.4\%) and higher than the percentage in all of the comparison states. $43.8 \%$ of Black Massachusetts AP Calculus BC takers scored a three or higher. This was lower than the national percentage for Black test-takers (54.9\%) and lower than the percentage in eight of the comparison states (Pennsylvania had the highest percentage at 69.4\%). 61.9\% of Hispanic Massachusetts AP Calculus BC takers scored a three or higher. This was lower than the national percentage for Hispanic test-takers (62.6\%) and lower than the percentage in six of the comparison states (New Jersey had the highest percentage at 83.1\%). 89.6\% of White Massachusetts AP Calculus BC takers scored a three or higher. This was higher than the national percentage for White test-takers (81.5\%) and higher than the percentage in eight of the comparison states (Connecticut had the highest percentage at 92.2\%). 85.7\% of public school Massachusetts AP Calculus BC takers scored a three or higher. This was higher than the national percentage for public school test-takers (79.1\%) and higher than the percentage in five of the comparison states (New Jersey had the highest percentage at 89.1\%).

In 2008, $71.2 \%$ of all Massachusetts takers of the Advanced Placement Statistics test scored a three or higher. This was higher than the national percentage for all test-takers (59.1\%) and higher than the percentage in seven of the comparison states (New Jersey had the highest percentage at 74.9\%). $66.3 \%$ of female Massachusetts AP Statistics takers scored a three or higher. This was higher than the national percentage for female test-takers (53.5\%) and higher than the percentage in seven of the comparison states (New Jersey had the highest percentage at 69.2\%). 75.6\% of male Massachusetts

UMass Donahue Institute Research and Evaluation Group

AP Statistics takers scored a three or higher. This was higher than the national percentage for male test-takers (64.8\%) and higher than the percentage in six of the comparison states (New Jersey had the highest percentage at 79.5\%). 72.3\% of Asian Massachusetts AP Statistics takers scored a three or higher. This was higher than the national percentage for Asian test-takers (67.7\%) and higher than the percentage in six of the comparison states (New Jersey had the highest percentage at 79.9\%). 37.2\% of Black Massachusetts AP Statistics takers scored a three or higher. This was higher than the national percentage for Black test-takers (23.9\%) and higher than the percentage in six of the comparison states (New Jersey had the highest percentage at 44.8\%). 41.4\% of Hispanic Massachusetts AP Statistics takers scored a three or higher. This was higher than the national percentage for Hispanic test-takers (33.5\%) but lower than the percentage in five of the comparison states (Pennsylvania had the highest percentage at $63.9 \%$ ). $74.0 \%$ of White Massachusetts AP Statistics takers scored a three or higher. This was higher than the national percentage for White test-takers (63.4\%) and higher than the percentage in six of the comparison states (Pennsylvania had the highest percentage at 77.0\%). $70.8 \%$ of public school Massachusetts AP Statistics takers scored a three or higher. This was higher than the national percentage for public school test-takers (58.2\%) and higher than the percentage in seven of the comparison states (New Jersey had the highest percentage at 75.8\%).

In 2008, 60.0\% of all Massachusetts takers of the Advanced Placement Biology test scored a three or higher. This was higher than the national percentage for all test-takers (49.8\%) and higher than the percentage in seven of the comparison states (Connecticut had the highest percentage at 68.0\%). $54.8 \%$ of female Massachusetts AP Biology takers scored a three or higher. This was higher than the national percentage for female test-takers (45.5\%) and higher than the percentage in seven of the comparison states (Connecticut had the highest percentage at $64.2 \%$ ). $68.5 \%$ of male Massachusetts AP Biology takers scored a three or higher. This was higher than the national percentage for male testtakers (55.9\%) and higher than the percentage in eight of the comparison states (Connecticut had the highest percentage at 73.6\%). 71.9\% of Asian Massachusetts AP Biology takers scored a three or higher. This was higher than the national percentage for Asian test-takers (59.1\%) and higher than the percentage in seven of the comparison states (Connecticut had the highest percentage at 73.5\%). $19.9 \%$ of Black Massachusetts AP Biology takers scored a three or higher. This was higher than the national percentage for Black test-takers (21.1\%) but lower than the percentage in seven of the comparison states (New Jersey had the highest percentage at 36.7\%). 33.7\% of Hispanic Massachusetts AP Biology takers scored a three or higher. This was higher than the national percentage for Hispanic test-takers (26.2\%) but lower than the percentage in five of the comparison states (Virginia had the highest percentage at 45.5\%). 61.3\% of White Massachusetts AP Biology takers scored a three or higher. This was higher than the national percentage for White test-takers (53.5\%) and higher than the percentage in six of the comparison states (Connecticut had the highest percentage at $70.4 \%$ ). $57.9 \%$ of public school Massachusetts AP Biology takers scored a three or higher. This was higher than the national percentage for public school test-takers (48.2\%) and higher than the percentage in seven of the comparison states (Connecticut had the highest percentage at 66.7\%).

In 2008, 67.1\% of all Massachusetts takers of the Advanced Placement Chemistry test scored a three or higher. This was higher than the national percentage for all test-takers (55.1\%) and higher than the percentage in seven of the comparison states (Connecticut had the highest percentage at 70.5\%). $60.7 \%$ of female Massachusetts AP Chemistry takers scored a three or higher. This was higher than the national percentage for female test-takers (48.0\%) and higher than the percentage in seven of the comparison states (Connecticut had the highest percentage at 65.6\%). 72.7\% of male Massachusetts AP Chemistry takers scored a three or higher. This was higher than the national percentage for male test-takers ( $61.3 \%$ ) and higher than the percentage in seven of the comparison states (Connecticut had the highest percentage at 75.2\%). 73.4\% of Asian Massachusetts AP Chemistry takers scored a three or higher. This was higher than the national percentage for Asian test-takers (64.6\%) and higher than the percentage in seven of the comparison states (New Jersey had the highest percentage at 75.8\%). $30.4 \%$ of Black Massachusetts AP Chemistry takers scored a three or higher. This was higher than the national percentage for Black test-takers (22.5\%) and higher than the percentage in six of the comparison states (New Jersey had the highest percentage at 33.1\%). 41.2\% of Hispanic Massachusetts AP Chemistry takers scored a three or higher. This was higher than the national

UMass Donahue Institute Research and Evaluation Group
percentage for Hispanic test-takers (29.9\%) but lower than the percentage in six of the comparison states (North Carolina had the highest percentage at 52.0\%). 67.2\% of White Massachusetts AP Chemistry takers scored a three or higher. This was higher than the national percentage for White testtakers (57.4\%) and higher than the percentage in five of the comparison states (Connecticut had the highest percentage at $72.6 \%$ ). $63.8 \%$ of public school Massachusetts AP Chemistry takers scored a three or higher. This was higher than the national percentage for public school test-takers (53.7\%) and higher than the percentage in six of the comparison states (Connecticut had the highest percentage at 68.5\%).

In 2008, 67.2\% of all Massachusetts takers of the Advanced Placement Physics B test scored a three or higher. This was higher than the national percentage for all test-takers (59.5\%) and higher than the percentage in five of the comparison states (New Jersey had the highest percentage at 70.5\%). 58.4\% of female Massachusetts AP Physics B takers scored a three or higher. This was higher than the national percentage for female test-takers (50.1\%) and higher than the percentage in five of the comparison states (Connecticut had the highest percentage at 68.6\%). 70.9\% of male Massachusetts AP Physics B takers scored a three or higher. This was higher than the national percentage for male test-takers (64.5\%) and higher than the percentage in five of the comparison states (New Jersey had the highest percentage at $76.8 \%$ ). $68.6 \%$ of Asian Massachusetts AP Physics B takers scored a three or higher. This was higher than the national percentage for Asian test-takers (64.2\%) and higher than the percentage in five of the comparison states (Illinois had the highest percentage at 79.6\%). 48.6\% of Black Massachusetts AP Physics B takers scored a three or higher. This was higher than the national percentage for Black test-takers (27.2\%) and higher than the percentage in seven of the comparison states (Minnesota had the highest percentage at 52.0\%). 34.6\% of Hispanic Massachusetts AP Physics B takers scored a three or higher. This was higher than the national percentage for Hispanic test-takers ( $31.4 \%$ ) and higher than the percentage in five of the comparison states (Connecticut had the highest percentage at 54.5\%). 68.7\% of White Massachusetts AP Physics B takers scored a three or higher. This was higher than the national percentage for White test-takers (64.1\%) and higher than the percentage in five of the comparison states (Illinois had the highest percentage at $79.9 \%$ ). $62.7 \%$ of public school Massachusetts AP Physics B takers scored a three or higher. This was higher than the national percentage for public school test-takers (58.0\%) but lower than the percentage in five of the comparison states (New Jersey had the highest percentage at 70.0\%).

In 2008, $83.4 \%$ of all Massachusetts takers of the Advanced Placement Physics C: Electrical \& Magnetic test scored a three or higher. This was higher than the national percentage for all test-takers ( $69.4 \%$ ) and higher than the percentage in eight of the comparison states (Connecticut had the highest percentage at $83.8 \%$ ). $75.5 \%$ of female Massachusetts AP Physics C: Electrical \& Magnetic takers scored a three or higher. This was higher than the national percentage for female test-takers (62.9\%) and higher than the percentage in eight of the comparison states (Connecticut had the highest percentage at $79.7 \%$ ). $85.2 \%$ of male Massachusetts AP Physics C: Electrical \& Magnetic takers scored a three or higher. This was higher than the national percentage for male test-takers (71.5\%) and higher than the percentage in eight of the comparison states (Connecticut had the highest percentage at $85.5 \%$ ). 81.3\% of Asian Massachusetts AP Physics C: Electrical \& Magnetic takers scored a three or higher. This was higher than the national percentage for Asian test-takers (72.5\%) and higher than the percentage in seven of the comparison states (New Jersey had the highest percentage at $81.9 \%$ ). $72.7 \%$ of Black Massachusetts AP Physics C: Electrical \& Magnetic takers scored a three or higher. This was higher than the national percentage for Black test-takers (46.7\%) and higher than the percentage in all of the comparison states. 30.0\% of Hispanic Massachusetts AP Physics C: Electrical \& Magnetic takers scored a three or higher. This was lower than the national percentage for Hispanic test-takers (55.3\%) and lower than the percentage in five of the comparison states (Connecticut had the highest percentage at 87.5\%). 85.2\% of White Massachusetts AP Physics C: Electrical \& Magnetic takers scored a three or higher. This was higher than the national percentage for White test-takers (69.9\%) and higher than the percentage in all of the comparison states. $81.3 \%$ of public school Massachusetts AP Physics C: Electrical \& Magnetic takers scored a three or higher. This was higher than the national percentage for public school test-takers (68.9\%) and higher than the percentage in all of the comparison states.

UMass Donahue Institute Research and Evaluation Group

In 2008, 79.9\% of all Massachusetts takers of the Advanced Placement Physics C: Mechanical test scored a three or higher. This was higher than the national percentage for all test-takers (73.1\%) but lower than the percentage in five of the comparison states (Connecticut had the highest percentage at 87.3\%). 74.4\% of female Massachusetts AP Physics C: Mechanical takers scored a three or higher. This was higher than the national percentage for female test-takers (63.4\%) and higher than the percentage in seven of the comparison states (Connecticut had the highest percentage at 81.3\%). 81.6\% of male Massachusetts AP Physics C: Mechanical takers scored a three or higher. This was higher than the national percentage for male test-takers (76.7\%) but lower than the percentage in five of the comparison states (Connecticut had the highest percentage at 89.4\%). 84.6\% of Asian Massachusetts AP Physics C: Mechanical takers scored a three or higher. This was higher than the national percentage for Asian test-takers (76.5\%) and higher than the percentage in seven of the comparison states (Connecticut had the highest percentage at $92.2 \%$ ). 34.4\% of Black Massachusetts AP Physics C: Mechanical takers scored a three or higher. This was higher than the national percentage for Black test-takers (44.5\%) but lower than the percentage in seven of the comparison states (Connecticut had the highest percentage at 85.7\%). 34.9\% of Hispanic Massachusetts AP Physics C: Mechanical takers scored a three or higher. This was lower than the national percentage for Hispanic test-takers (50.1\%) and lower than the percentage in seven of the comparison states (Connecticut had the highest percentage at $85.7 \%$ ). 83.5\% of White Massachusetts AP Physics C: Mechanical takers scored a three or higher. This was higher than the national percentage for White test-takers (75.3\%) and higher than the percentage in seven of the comparison states (Connecticut had the highest percentage at 85.7\%). 77.8\% of public school Massachusetts AP Physics C: Mechanical takers scored a three or higher. This was higher than the national percentage for public school testtakers (72.5\%) and higher than the percentage in five of the comparison states (Connecticut had the highest percentage at 90.2\%).

In 2008, 70.3\% of all Massachusetts takers of the Advanced Placement Computer Science A test scored a three or higher. This was higher than the national percentage for all test-takers (56.9\%) and higher than the percentage in all of the comparison states. 78.0\% of female Massachusetts AP Computer Science A takers scored a three or higher. This was higher than the national percentage for female test-takers (52.0\%) and higher than the percentage in all of the comparison states. $69.1 \%$ of male Massachusetts AP Computer Science A takers scored a three or higher. This was higher than the national percentage for male test-takers (58.0\%) and higher than the percentage in eight of the comparison states (Minnesota had the highest percentage at 71.7\%). 71.3\% of Asian Massachusetts AP Computer Science A takers scored a three or higher. This was higher than the national percentage for Asian test-takers (61.0\%) and higher than the percentage in eight of the comparison states (New Jersey had the highest percentage at $72.1 \%$ ). $0.0 \%$ of Black Massachusetts AP Computer Science A takers scored a three or higher. This was lower than the national percentage for Black test-takers (24.8\%) and lower than the percentage in eight of the comparison states (California had the highest percentage at $44.4 \%$ ). $26.7 \%$ of Hispanic Massachusetts AP Computer Science A takers scored a three or higher. This was lower than the national percentage for Hispanic test-takers (34.9\%) and lower than the percentage in six of the comparison states (New York had the highest percentage at 44.8\%). $72.8 \%$ of White Massachusetts AP Computer Science A takers scored a three or higher. This was higher than the national percentage for White test-takers (61.2\%) and higher than the percentage in all of the comparison states. $69.7 \%$ of public school Massachusetts AP Computer Science A takers scored a three or higher. This was higher than the national percentage for public school test-takers $(56.7 \%)$ and higher than the percentage in seven of the comparison states (Minnesota had the highest percentage at 72.7\%).

In 2008, 82.0\% of all Massachusetts takers of the Advanced Placement Computer Science AB test scored a three or higher. This was higher than the national percentage for all test-takers (73.2\%) and higher than the percentage in all of the comparison states. $91.7 \%$ of female Massachusetts AP Computer Science AB takers scored a three or higher. This was higher than the national percentage for female test-takers (72.7\%) and higher than the percentage in all of the comparison states. 80.7\% of male Massachusetts AP Computer Science AB takers scored a three or higher. This was higher than the national percentage for male test-takers (73.3\%) and higher than the percentage in eight of the

UMass Donahue Institute Research and Evaluation Group
comparison states (California had the highest percentage at 81.5\%). 77.1\% of Asian Massachusetts
AP Computer Science AB takers scored a three or higher. This was higher than the national percentage for Asian test-takers (78.1\%) but lower than the percentage in five of the comparison states (Pennsylvania had the highest percentage at 89.5\%). 0.0\% of Black Massachusetts AP Computer Science AB takers scored a three or higher. This was lower than the national percentage for Black test-takers (32.4\%) and lower than the percentage in three of the comparison states (California had the highest percentage at 83.3\%). 0.0\% of Hispanic Massachusetts AP Computer Science AB takers scored a three or higher. This was lower than the national percentage for Hispanic test-takers (61.1\%) and lower than the percentage in four of the comparison states (California had the highest percentage at $68.4 \%$ ). $82.6 \%$ of White Massachusetts AP Computer Science AB takers scored a three or higher. This was higher than the national percentage for White test-takers (73.2\%) and higher than the percentage in all of the comparison states. $84.8 \%$ of public school Massachusetts AP Computer Science AB takers scored a three or higher. This was higher than the national percentage for public school test-takers (73.3\%) and higher than the percentage in all of the comparison states.

## Technical Notes

The Advanced Placement (AP) tests are national tests administered by the College Board that measure students' knowledge in specific subject areas. AP tests are commonly taken by students during the spring semester of their enrollment in an AP course in high school. Students may take as many AP tests as they have AP courses. If a student scores high enough on an AP test, at the discretion of the college, he/she may be granted college credits or have college course requirements waived in that subject area.

The home page for The College Board is: http://www.collegeboard.com/. The website from which all College Board public reports and research can be accessed is:
http://professionals.collegeboard.com/data-reports-research. Finally, the website for the 2008 AP Summary reports (the most recent ones at the time this report was written) is: http://www.collegeboard.com/student/testing/ap/exgrd sum/2008.html.

## Summary

It should be noted that the percentage of students who take the PSAT in Illinois or Minnesota is lower than the percentage in Massachusetts or other comparison states (the preliminary tests leading up to the ACT are dominant in Minnesota and Illinois). Also, the scores for students in Illinois and Minnesota are higher than those for students in Massachusetts or other comparison states. It is theorized that PSAT-taking students in Illinois and Minnesota may be higher achievers who intend to apply to out-ofstate colleges, or who plan to apply for National Merit Scholarships. In contrast, the majority of all college-bound students in Massachusetts and other comparison states take the PSAT, regardless of academic status or college location. Because of these differences, Illinois and Minnesota are excluded from our analysis of PSAT-based data in this, and other, indicators (though their data are still reported in the tables because of their status as economic competitors), and Massachusetts is compared only to the seven remaining states.

In 2008, 29.6\% of all Massachusetts sophomore PSAT test-takers responded they were interested in majoring in a STEM field in college. This was lower than the national average (34.1\%) and lower than four of the comparison states included in the analysis (North Carolina had the highest rate of STEM interest at 41.5\%).

In 2008, $0.7 \%$ of all Massachusetts sophomore PSAT test-takers responded they were interested in majoring in agriculture and natural resources. This was lower than the national average (1.2\%) and lower than five of the comparison states included in the analysis (North Carolina had the highest rate of interest in agriculture and natural resources at 1.9\%). $2.0 \%$ of all Massachusetts sophomore PSAT test-takers responded they were interested in majoring in architecture. This was lower than the national average ( $2.1 \%$ ) and lower than five of the comparison states included in the analysis (North Carolina had the highest rate of interest in architecture at $2.4 \%$ ). $4.2 \%$ of all Massachusetts sophomore PSAT test-takers responded they were interested in majoring in biological and biomedical sciences. This was higher than the national average (3.6\%) and higher than five of the comparison states included in the analysis (California had the highest rate of interest in biological and biomedical sciences at 4.3\%). $1.0 \%$ of all Massachusetts sophomore PSAT test-takers responded they were interested in majoring in computer and information sciences. This was equal to the national average (1.0\%) and higher than four of the comparison states included in the analysis (Virginia had the highest rate of interest in computer and information sciences at 1.5\%). 7.6\% of all Massachusetts sophomore PSAT test-takers responded they were interested in majoring in engineering and engineering technology. This was lower than the national average (9.3\%) and lower than four of the comparison states included in the analysis (North Carolina had the highest rate of interest in engineering and engineering technology at 10.6\%). $12.2 \%$ of all Massachusetts sophomore PSAT test-takers responded they were interested in majoring in health professions. This was lower than the national average (15.1\%) and lower than four of the comparison states included in the analysis (North Carolina had the highest rate of interest in health professions at $20.2 \%$ ). $0.9 \%$ of all Massachusetts sophomore PSAT test-takers responded they were interested in majoring in mathematics and statistics. This was higher than the national average ( $0.8 \%$ ) and higher than four of the comparison states included in the analysis (Pennsylvania had the highest rate of interest in mathematics and statistics at 1.0\%). 1.1\% of all Massachusetts sophomore PSAT test-takers responded they were interested in majoring in physical sciences. This was higher than the national average ( $0.9 \%$ ) and higher than six of the comparison states included in the analysis (Pennsylvania had the highest rate of interest in physical sciences at 1.2\%).

## Technical Notes

The PSAT/NMSQT (Preliminary SAT/National Merit Scholarship Qualifying Test) is jointly sponsored by the College Board and the National Merit Scholarship Corporation and may be taken by students during their sophomore or junior year of high school. In addition to helping students prepare for the SAT, participation in the PSAT enables students to access the National Merit Scholarship Corporation's scholarships. The PSAT is a national, standardized test that measures students' skills in critical

UMass Donahue Institute Research and Evaluation Group
reading, mathematics, and writing. It is a preliminary test taken by students planning to enter college. The PSAT has an associated survey where students give information about, grades, plans for college, and other data. Percentages reported in Indicator 13 are based on the total number of PSAT testtakers and not the number of respondents to the survey question about college major preference.

The home page for The College Board is: http://www.collegeboard.com/. The website from which all College Board public reports and research can be accessed is:

## Summary

It should be noted that the percentage of students who take the PSAT in Illinois or Minnesota is lower than the percentage in Massachusetts or other comparison states (the preliminary tests leading up to the ACT are dominant in Minnesota and Illinois). Also, the scores for students in Illinois and Minnesota are higher than those for students in Massachusetts or other comparison states. It is theorized that PSAT-taking students in Illinois and Minnesota may be higher achievers who intend to apply to out-ofstate colleges, or who plan to apply for National Merit Scholarships. In contrast, the majority of all college-bound students in Massachusetts and other comparison states take the PSAT, regardless of academic status or college location. Because of these differences, Illinois and Minnesota are excluded from our analysis of PSAT-based data in this, and other, indicators (though their data are still reported in the tables because of their status as economic competitors), and Massachusetts is compared only to the seven remaining states.

In 2008, 30.5\% of all Massachusetts junior PSAT test-takers responded they were interested in majoring in a STEM field in college. This was lower than the national average (36.7\%) and lower than five of the comparison states included in the analysis (North Carolina had the highest rate of STEM interest at 42.1\%).

In 2008, $0.9 \%$ of all Massachusetts junior PSAT test-takers responded they were interested in majoring in agriculture and natural resources. This was lower than the national average (1.3\%) and lower than five of the comparison states included in the analysis (North Carolina had the highest rate of interest in agriculture and natural resources at 1.6\%). 1.8\% of all Massachusetts junior PSAT test-takers responded they were interested in majoring in architecture. This was lower than the national average (2.0\%) and lower than four of the comparison states included in the analysis (North Carolina and California had the highest rate of interest in architecture at 2.2\%). 4.0\% of all Massachusetts junior PSAT test-takers responded they were interested in majoring in biological and biomedical sciences. This was higher than the national average (3.8\%) and higher than six of the comparison states included in the analysis (California had the highest rate of interest in biological and biomedical sciences at 5.2\%). 1.1\% of all Massachusetts junior PSAT test-takers responded they were interested in majoring in computer and information sciences. This was lower than the national average (1.2\%) and lower than five of the comparison states included in the analysis (Virginia had the highest rate of interest in computer and information sciences at 1.6\%). 7.9\% of all Massachusetts junior PSAT test-takers responded they were interested in majoring in engineering and engineering technology. This was lower than the national average (9.2\%) and lower than four of the comparison states included in the analysis (North Carolina had the highest rate of interest in engineering and engineering technology at 10.2\%). 12.9\% of all Massachusetts junior PSAT test-takers responded they were interested in majoring in health professions. This was lower than the national average (17.5\%) and lower than six of the comparison states included in the analysis (North Carolina had the highest rate of interest in health professions at $21.4 \%$ ). $0.8 \%$ of all Massachusetts junior PSAT test-takers responded they were interested in majoring in mathematics and statistics. This was higher than the national average (0.6\%) and tied for highest among the comparison states included in the analysis. 1.0\% of all Massachusetts junior PSAT test-takers responded they were interested in majoring in physical sciences. This was higher than the national average (1.1\%) but lower than five of the comparison states included in the analysis (Pennsylvania had the highest rate of interest in physical sciences at 1.3\%).

## Technical Notes

The PSAT/NMSQT (Preliminary SAT/National Merit Scholarship Qualifying Test) is jointly sponsored by the College Board and the National Merit Scholarship Corporation and may be taken by students during their sophomore or junior year of high school. In addition to helping students prepare for the SAT, participation in the PSAT enables students to access the National Merit Scholarship Corporation's scholarships. The PSAT is a national, standardized test that measures students' skills in critical reading, mathematics, and writing. It is a preliminary test taken by students planning to enter college.

UMass Donahue Institute Research and Evaluation Group

The PSAT has an associated survey where students give information about, grades, plans for college, and other data. Percentages reported in Indicator 13 are based on the total number of PSAT testtakers and not the number of respondents to the survey question about college major preference.

The home page for The College Board is: http://www.collegeboard.com/. The website from which all College Board public reports and research can be accessed is:
http://professionals.collegeboard.com/data-reports-research. Finally, the website for the 2008 "College Bound Sophomores and Juniors" reports (the most recent ones at the time this report was written) is http://professionals.collegeboard.com/data-reports-research/psat/cb-jr-soph.

## Summary

It should be noted that the percentage of students who take the SAT in Illinois or Minnesota is lower than the percentage in Massachusetts or other comparison states (the ACT is the dominant test in Minnesota and Illinois). Also, the scores for students in Illinois and Minnesota are higher than those for students in Massachusetts or other comparison states. It is theorized that SAT-taking students in Illinois and Minnesota may be higher achievers who intend to apply to out-of-state colleges, while most in-state college-bound students take only the ACT. In contrast, the majority of all college-bound students in Massachusetts and other comparison states take the SAT, regardless of academic status or college location. Because of these differences, Illinois and Minnesota are excluded from our analysis of SAT-based data in this, and other, indicators (though their data are still reported in the tables because of their status as economic competitors), and Massachusetts is compared only to the seven remaining states.

In 2008, 22.6\% of all Massachusetts SAT test-takers responded they were interested in majoring in a STEM field in college. This was lower than the national average (29.1\%) and lower than six of the comparison states included in the analysis (North Carolina had the highest rate of STEM interest at 34.5\%). In 2008, $0.7 \%$ of all Massachusetts SAT test-takers responded they were interested in majoring in agriculture and natural resources. This was lower than the national average ( $0.8 \%$ ) and lower than four of the comparison states included in the analysis (North Carolina had the highest rate of interest in agriculture and natural resources at 1.1\%). 1.3\% of all Massachusetts SAT test-takers responded they were interested in majoring in architecture. This was lower than the national average (1.6\%) and lower than six of the comparison states included in the analysis (California had the highest rate of interest in architecture at $1.9 \%$ ). $3.0 \%$ of all Massachusetts SAT test-takers responded they were interested in majoring in biological and biomedical sciences. This was lower than the national average (3.8\%) and lower than six of the comparison states included in the analysis (California had the highest rate of interest in biological and biomedical sciences at $5.0 \%$ ). $1.6 \%$ of all Massachusetts SAT test-takers responded they were interested in majoring in computer and information sciences. This was lower than the national average (2.0\%) and lower than six of the comparison states included in the analysis (Virginia had the highest rate of interest in computer and information sciences at 3.0\%). 4.9\% of all Massachusetts SAT test-takers responded they were interested in majoring in engineering and engineering technology. This was lower than the national average (6.4\%) and lower than four of the comparison states included in the analysis (North Carolina and Virginia had the highest rate of interest in engineering and engineering technology at $6.8 \%$ ). $9.8 \%$ of all Massachusetts SAT test-takers responded they were interested in majoring in health professions. This was lower than the national average (12.9\%) and lower than six of the comparison states included in the analysis (North Carolina had the highest rate of interest in health professions at $17.5 \%$ ). $0.7 \%$ of all Massachusetts SAT testtakers responded they were interested in majoring in mathematics and statistics. This was higher than the national average ( $0.6 \%$ ) and higher than six of the comparison states included in the analysis (California had the highest rate of interest in mathematics and statistics at 0.8\%). $0.8 \%$ of all Massachusetts SAT test-takers responded they were interested in majoring in physical sciences. This was lower than the national average (1.0\%) and lower than four of the comparison states included in the analysis (Pennsylvania had the highest rate of interest in physical sciences at 1.1\%).

## Technical Notes

The SAT is a national, standardized test that measures students' skills in critical reading, mathematics, and writing. It is the primary test taken by students planning to enter college. The home page for The College Board is: http://www.collegeboard.com/. The website from which all College Board public reports and research can be accessed is: http://professionals.collegeboard.com/data-reports-research. Finally, the website for the 2008 "College Bound Seniors" reports (the most recent ones at the time this report was written) is: http://professionals.collegeboard.com/data-reports-research/sat/cb-seniors2008.

## Summary

In 2008, $0.7 \%$ of all Associate's Degrees and Certificates below Bachelor's Degrees granted in Massachusetts were in Agriculture and Natural Resources. This percentage was equal to the national average $(0.7 \%)$ but higher than in six of the nine comparison states (North Carolina had the highest percentage at $2.1 \%$ ). Among female students in Massachusetts, the percentage was $0.5 \%$. This was higher than the national average among female students (0.4\%) and higher than in four of the comparison states (Minnesota had the highest percentage among female students at 0.8\%). Among male students in Massachusetts, the percentage was $1.1 \%$. This was lower than the national average among male students (1.3\%) but higher than in six of the comparison states (North Carolina had the highest percentage among male students at 4.2\%). Among Asian students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among Asian students (0.2\%) and lower than in six of the comparison states (North Carolina had the highest percentage among Asian students at $0.6 \%)$. Among Black students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among Black students (0.3\%) and lower than in five of the comparison states (California and North Carolina had the highest percentage among Black students at 1.3\%). Among Hispanic students in Massachusetts, the percentage was $0.1 \%$. This was lower than the national average among Hispanic students ( $0.2 \%$ ) and lower than in five of the comparison states (North Carolina had the highest percentage among Hispanic students at 0.9\%). Among White students in Massachusetts, the percentage was $1.0 \%$. This was lower than the national average among White students (1.1\%) but higher than in four of the comparison states (North Carolina had the highest percentage among White students at $2.5 \%$ ).

In 2008, female students earned $48.0 \%$ of the Associate's Degrees and Certificates below Bachelor's degrees in Agriculture and Natural Resources granted in Massachusetts. This was higher than the national average of $34.7 \%$ for degrees earned by female students and higher than the percentage in seven of the nine comparison states (Connecticut had the highest percentage of degrees earned by female students at 69.0\%). Male students earned 52.0\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $65.3 \%$ for degrees earned by male students and lower than the percentage in seven of the comparison states (North Carolina had the highest percentage of degrees earned by male students at $82.8 \%$ ). Asian students earned $0.0 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $1.1 \%$ for degrees earned by Asian students and lower than the percentage in seven of the comparison states (New Jersey had the highest percentage of degrees earned by Asian students at 3.4\%). Black students earned $0.7 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $5.9 \%$ for degrees earned by Black students and lower than the percentage in seven of the comparison states (California had the highest percentage of degrees earned by Black students at 17.0\%). Hispanic students earned 0.7\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $4.9 \%$ for degrees earned by Hispanic students and lower than the percentage in eight of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 14.5\%). White students earned $88.8 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Agriculture and Natural Resources granted in Massachusetts. This was higher than the national average of $82.8 \%$ for degrees earned by White students and higher than the percentage in five of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 96.5\%).

In 2008, 0.7\% of all Bachelor's degrees granted in Massachusetts were in Agriculture and Natural Resources. This percentage was lower than the national average (1.5\%) and lower than the percentage in eight of the nine comparison states (California, Minnesota, and North Carolina had the highest percentage at 1.5\%). Among female students in Massachusetts, the percentage was $0.6 \%$. This was lower than the national average among female students (1.3\%) and lower than in all of the comparison states (California had the highest percentage among female students at 1.5\%). Among

UMass Donahue Institute Research and Evaluation Group
male students in Massachusetts, the percentage was $0.9 \%$. This was lower than the national average among male students (1.8\%) and lower than in eight of the comparison states (North Carolina had the highest percentage among male students at 2.0\%). Among Asian students in Massachusetts, the percentage was $0.5 \%$. This was lower than the national average among Asian students (0.8\%) and lower than in five of the comparison states (California had the highest percentage among Asian students at 1.2\%). Among Black students in Massachusetts, the percentage was $0.3 \%$. This was lower than the national average among Black students (0.5\%) and lower than in three of the comparison states (California had the highest percentage among Black students at 0.6\%). Among Hispanic students in Massachusetts, the percentage was $0.2 \%$. This was lower than the national average among Hispanic students ( $0.9 \%$ ) and lower than in all of the comparison states (Minnesota and Pennsylvania had the highest percentage among Hispanic students at 0.9\%). Among White students in Massachusetts, the percentage was $0.9 \%$. This was lower than the national average among White students (1.8\%) and lower than in all of the comparison states (California had the highest percentage among White students at 2.1\%).

In 2008, female students earned 49.6\% of the Bachelor's degrees in Agriculture and Natural Resources granted in Massachusetts. This was higher than the national average of $47.9 \%$ for degrees earned by female students but lower than the percentage in five of the nine comparison states (New Jersey had the highest percentage of degrees earned by female students at 64.8\%). Male students earned 50.4\% of the Bachelor's degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $52.1 \%$ for degrees earned by male students but higher than the percentage in five of the comparison states (Minnesota had the highest percentage of degrees earned by male students at 55.2\%). Asian students earned $4.5 \%$ of the Bachelor's degrees in Agriculture and Natural Resources granted in Massachusetts. This was higher than the national average of $3.6 \%$ for degrees earned by Asian students and higher than the percentage in eight of the comparison states (California had the highest percentage of degrees earned by Asian students at 16.9\%). Black students earned $2.5 \%$ of the Bachelor's degrees in Agriculture and Natural Resources granted in
Massachusetts. This was lower than the national average of $2.9 \%$ for degrees earned by Black students and lower than the percentage in five of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 6.8\%). Hispanic students earned 1.5\% of the Bachelor's degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $5.0 \%$ for degrees earned by Hispanic students and lower than the percentage in seven of the comparison states (California had the highest percentage of degrees earned by Hispanic students at $9.9 \%$ ). White students earned $82.4 \%$ of the Bachelor's degrees in Agriculture and Natural Resources granted in Massachusetts. This was higher than the national average of $81.9 \%$ for degrees earned by White students but lower than the percentage in five of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 91.8\%).

In 2008, 0.2\% of all Certificates above Bachelor's Degrees and Master's Degrees granted in Massachusetts were in Agriculture and Natural Resources. This percentage was lower than the national average ( $0.7 \%$ ) and lower than the percentage in eight of the nine comparison states (North Carolina had the highest percentage at 1.8\%). Among female students in Massachusetts, the percentage was $0.2 \%$. This was lower than the national average among female students ( $0.6 \%$ ) and lower than in eight of the comparison states (North Carolina had the highest percentage among female students at $1.9 \%$ ). Among male students in Massachusetts, the percentage was $0.2 \%$. This was lower than the national average among male students ( $0.8 \%$ ) and lower than in eight of the comparison states (Connecticut and North Carolina had the highest percentage among male students at 1.6\%). Among Asian students in Massachusetts, the percentage was $0.1 \%$. This was lower than the national average among Asian students ( $0.3 \%$ ) and lower than in six of the comparison states (North Carolina had the highest percentage among Asian students at 1.8\%). Among Black students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among Black students ( $0.2 \%$ ) and lower than in eight of the comparison states (Connecticut and North Carolina had the highest percentage among Black students at 0.7\%). Among Hispanic students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among Hispanic students (0.4\%) and lower than in six of the comparison states (North Carolina had the highest percentage among Hispanic

UMass Donahue Institute Research and Evaluation Group
students at 1.6\%). Among White students in Massachusetts, the percentage was $0.2 \%$. This was lower than the national average among White students ( $0.9 \%$ ) and lower than in eight of the comparison states (North Carolina had the highest percentage among White students at 2.2\%).

In 2008, female students earned $64.8 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Agriculture and Natural Resources granted in Massachusetts. This was higher than the national average of $53.3 \%$ for degrees earned by female students and higher than the percentage in eight of the nine comparison states (Illinois had the highest percentage of degrees earned by female students at 65.2\%). Male students earned 35.2\% of the Certificates above Bachelor's Degrees and Master's Degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $46.7 \%$ for degrees earned by male students and lower than the percentage in eight of the comparison states (New Jersey had the highest percentage of degrees earned by male students at $55.7 \%$ ). Asian students earned $1.9 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $2.2 \%$ for degrees earned by Asian students and lower than the percentage in five of the comparison states (New Jersey had the highest percentage of degrees earned by Asian students at 6.6\%). Black students earned $0.0 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $2.4 \%$ for degrees earned by Black students and lower than the percentage in all of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at $5.3 \%$ ). Hispanic students earned $0.0 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $3.5 \%$ for degrees earned by Hispanic students and lower than the percentage in seven of the comparison states (California had the highest percentage of degrees earned by Hispanic students at $5.6 \%$ ). White students earned $59.3 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $70.2 \%$ for degrees earned by White students and lower than the percentage in six of the comparison states (Virginia had the highest percentage of degrees earned by White students at $85.5 \%$ ).

In 2008, 0.3\% of all Doctor's and First Professional Degrees granted in Massachusetts were in Agriculture and Natural Resources. This percentage was lower than the national average (0.8\%) and lower than the percentage in eight of the nine comparison states (North Carolina had the highest percentage at $1.8 \%$ ). Among female students in Massachusetts, the percentage was $0.2 \%$. This was lower than the national average among female students (0.7\%) and lower than in all of the comparison states (North Carolina had the highest percentage among female students at 1.5\%). Among male students in Massachusetts, the percentage was $0.4 \%$. This was lower than the national average among male students (1.0\%) and lower than in eight of the comparison states (North Carolina had the highest percentage among male students at 2.1\%). Among Asian students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among Asian students (0.3\%) and lower than in seven of the comparison states (North Carolina had the highest percentage among Asian students at 1.3\%). Among Black students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among Black students (0.3\%) and lower than in five of the comparison states (Connecticut had the highest percentage among Black students at 1.0\%). Among Hispanic students in Massachusetts, the percentage was $0.4 \%$. This was higher than the national average among Hispanic students (0.3\%) and higher than in seven of the comparison states (North Carolina had the highest percentage among Hispanic students at 3.5\%). Among White students in Massachusetts, the percentage was $0.2 \%$. This was lower than the national average among White students ( $0.6 \%$ ) and lower than in eight of the comparison states (North Carolina had the highest percentage among White students at 1.9\%).

In 2008, female students earned 36.4\% of the Doctor's and First Professional Degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of 41.0\% for degrees earned by female students and lower than the percentage in eight of the nine comparison states (Virginia had the highest percentage of degrees earned by female students at 54.2\%). Male

UMass Donahue Institute Research and Evaluation Group
students earned 63.6\% of the Doctor's and First Professional Degrees in Agriculture and Natural Resources granted in Massachusetts. This was higher than the national average of $59.0 \%$ for degrees earned by male students and higher than the percentage in eight of the comparison states (Illinois had the highest percentage of degrees earned by male students at 71.7\%). Asian students earned 0.0\% of the Doctor's and First Professional Degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $3.0 \%$ for degrees earned by Asian students and lower than the percentage in seven of the comparison states (Illinois had the highest percentage of degrees earned by Asian students at 10.9\%). Black students earned $0.0 \%$ of the Doctor's and First Professional Degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $2.2 \%$ for degrees earned by Black students and lower than the percentage in five of the comparison states (Connecticut had the highest percentage of degrees earned by Black students at $6.3 \%$ ). Hispanic students earned $4.5 \%$ of the Doctor's and First Professional Degrees in Agriculture and Natural Resources granted in Massachusetts. This was higher than the national average of $1.6 \%$ for degrees earned by Hispanic students and higher than the percentage in seven of the comparison states (Minnesota had the highest percentage of degrees earned by Hispanic students at 6.5\%). White students earned $31.8 \%$ of the Doctor's and First Professional Degrees in Agriculture and Natural Resources granted in Massachusetts. This was lower than the national average of $46.8 \%$ for degrees earned by White students and lower than the percentage in six of the comparison states (North Carolina had the highest percentage of degrees earned by White students at 70.8\%).

## Technical Notes

The Integrated Post-Secondary Education Data System (IPEDS) is maintained by the National Center for Education Statistics (NCES-a division of the U.S. Department of Education) and annually collects data from every college, university, and technical and vocational institution that participates in U.S. federal student financial aid programs (such as Pell grants and federal student loans). The Higher Education Act of 1965, as amended, requires that institutions that participate in federal student aid programs report data on enrollments, program completions, graduation rates, faculty and staff, finances, institutional prices, and student financial aid. The home page for NCES is: http://www.nces.ed.gov/. The home page for IPEDS is: http://nces.ed.gov/ipeds/.

## Summary

Note: Zero (0) Associate's Degrees and Certificates below Bachelor's Degrees were granted in Architecture by Massachusetts colleges in 2008.

In 2008, 0.0\% of all Associate's Degrees and Certificates below Bachelor's Degrees granted in Massachusetts were in Architecture. This percentage was lower than the national average (0.1\%) and lower than in four of the nine comparison states (California had the highest percentage at $0.2 \%$ ). Among female students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among female students ( $0.1 \%$ ) and lower than in four of the comparison states (California, Connecticut, New York, and Virginia had the highest percentage among female students at 0.1\%). Among male students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among male students ( $0.1 \%$ ) and lower than in three of the comparison states (California had the highest percentage among male students at 0.4\%). Among Asian students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among Asian students (0.1\%) and lower than in two of the comparison states (Virginia had the highest percentage among Asian students at $0.3 \%$ ). Among Black students in Massachusetts, the percentage was $0.0 \%$. This was equal to the national average among Black students ( $0.1 \%$ ) and equal to all of the comparison states. Among Hispanic students in Massachusetts, the percentage was $0.1 \%$. This was lower than the national average among Hispanic students ( $0.1 \%$ ) and lower than in three of the comparison states (Virginia had the highest percentage among Hispanic students at 0.6\%). Among White students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among White students ( $0.1 \%$ ) and lower than in five of the comparison states (California and New York had the highest percentage among White students at $0.2 \%$ ).

In 2008, female students earned 0.0\% of the Associate's Degrees and Certificates below Bachelor's degrees in Architecture granted in Massachusetts. This was lower than the national average of 52.2\% for degrees earned by female students and lower than the percentage in seven of the nine comparison states (Connecticut had the highest percentage of degrees earned by female students at 87.5\%). Male students earned $0.0 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Architecture granted in Massachusetts. This was lower than the national average of $47.8 \%$ for degrees earned by male students and lower than the percentage in seven of the comparison states (Pennsylvania had the highest percentage of degrees earned by male students at 95.2\%). Asian students earned $0.0 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Architecture granted in Massachusetts. This was lower than the national average of $8.9 \%$ for degrees earned by Asian students and lower than the percentage in two of the comparison states (California had the highest percentage of degrees earned by Asian students at 14.7\%). Black students earned $0.0 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Architecture granted in Massachusetts. This was lower than the national average of $6.8 \%$ for degrees earned by Black students and lower than the percentage in four of the comparison states (Virginia had the highest percentage of degrees earned by Black students at 9.7\%). Hispanic students earned $0.0 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Architecture granted in Massachusetts. This was lower than the national average of $27.6 \%$ for degrees earned by Hispanic students and lower than the percentage in four of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 42.5\%). White students earned $0.0 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Architecture granted in Massachusetts. This was lower than the national average of $46.3 \%$ for degrees earned by White students and lower than the percentage in seven of the comparison states (North Carolina had the highest percentage of degrees earned by White students at 100.0\%).

In 2008, 0.5\% of all Bachelor's degrees granted in Massachusetts were in Architecture. This percentage was lower than the national average ( $0.6 \%$ ) and lower than the percentage in three of the nine comparison states (California and New York had the highest percentage at 0.7\%). Among female students in Massachusetts, the percentage was $0.4 \%$. This was lower than the national average among female students ( $0.5 \%$ ) and lower than in three of the comparison states (California, New York

Indicator 17: Number of college students who complete
Research and Evaluation Group
degrees in Architecture
and Pennsylvania had the highest percentage among female students at 0.5\%). Among male students in Massachusetts, the percentage was $0.7 \%$. This was lower than the national average among male students ( $0.8 \%$ ) but higher than in four of the comparison states (New York had the highest percentage among male students at 1.0\%). Among Asian students in Massachusetts, the percentage was $0.6 \%$. This was lower than the national average among Asian students ( $0.7 \%$ ) and lower than in six of the comparison states (Minnesota had the highest percentage among Asian students at 0.9\%). Among Black students in Massachusetts, the percentage was $0.3 \%$. This was equal to the national average among Black students (0.3\%) but higher than in five of the comparison states (New York and Virginia had the highest percentage among Black students at 0.4\%). Among Hispanic students in Massachusetts, the percentage was $0.5 \%$. This was lower than the national average among Hispanic students ( $0.8 \%$ ) and lower than in five of the comparison states (New York and Virginia had the highest percentage among Hispanic students at 0.9\%). Among White students in Massachusetts, the percentage was $0.6 \%$. This was equal to the national average among White students ( $0.6 \%$ ) but higher than in five of the comparison states (New York had the highest percentage among White students at $0.7 \%)$.

In 2008, female students earned 47.0\% of the Bachelor's degrees in Architecture granted in Massachusetts. This was higher than the national average of $43.3 \%$ for degrees earned by female students and higher than the percentage in six of the nine comparison states (Connecticut had the highest percentage of degrees earned by female students at 54.4\%). Male students earned 53.0\% of the Bachelor's degrees in Architecture granted in Massachusetts. This was lower than the national average of $56.7 \%$ for degrees earned by male students and lower than the percentage in six of the comparison states (New Jersey had the highest percentage of degrees earned by male students at $72.1 \%$ ). Asian students earned $7.7 \%$ of the Bachelor's degrees in Architecture granted in Massachusetts. This was lower than the national average of $7.8 \%$ for degrees earned by Asian students and lower than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Asian students at 24.1\%). Black students earned $2.8 \%$ of the Bachelor's degrees in Architecture granted in Massachusetts. This was lower than the national average of $4.7 \%$ for degrees earned by Black students and lower than the percentage in seven of the comparison states (Virginia had the highest percentage of degrees earned by Black students at 10.0\%). Hispanic students earned 4.9\% of the Bachelor's degrees in Architecture granted in Massachusetts. This was lower than the national average of $10.9 \%$ for degrees earned by Hispanic students and lower than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 20.1\%). White students earned 703.5\% of the Bachelor's degrees in Architecture granted in Massachusetts. This was higher than the national average of $66.4 \%$ for degrees earned by White students and higher than the percentage in five of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 88.1\%).

In 2008, 1.8\% of all Certificates above Bachelor's Degrees and Master's Degrees granted in Massachusetts were in Architecture. This percentage was higher than the national average (0.9\%) and higher than the percentage in all of the nine comparison states. Among female students in Massachusetts, the percentage was $1.5 \%$. This was higher than the national average among female students ( $0.7 \%$ ) and lower than in all of the comparison states. Among male students in Massachusetts, the percentage was $2.4 \%$. This was higher than the national average among male students (1.2\%) and higher than in all of the comparison states. Among Asian students in Massachusetts, the percentage was $3.4 \%$. This was higher than the national average among Asian students (1.0\%) and higher than in all of the comparison states. Among Black students in Massachusetts, the percentage was $0.9 \%$. This was higher than the national average among Black students ( $0.4 \%$ ) and higher than in all of the comparison states. Among Hispanic students in Massachusetts, the percentage was $1.9 \%$. This was higher than the national average among Hispanic students ( $1.0 \%$ ) and higher than in all of the comparison states. Among White students in Massachusetts, the percentage was $1.5 \%$. This was higher than the national average among White students (0.9\%) and higher than in all of the comparison states.

UMass Donahue Institute Research and Evaluation Group

In 2008, female students earned 49.7\% of the Certificates above Bachelor's Degrees and Master's Degrees in Architecture granted in Massachusetts. This was higher than the national average of $46.9 \%$ for degrees earned by female students and higher than the percentage in five of the nine comparison states (North Carolina had the highest percentage of degrees earned by female students at 61.4\%). Male students earned 50.3\% of the Certificates above Bachelor's Degrees and Master's Degrees in Architecture granted in Massachusetts. This was lower than the national average of $63.1 \%$ for degrees earned by male students and lower than the percentage in five of the comparison states (Connecticut had the highest percentage of degrees earned by male students at 59.8\%). Asian students earned $10.1 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Architecture granted in Massachusetts. This was higher than the national average of $5.7 \%$ for degrees earned by Asian students and higher than the percentage in eight of the comparison states (California had the highest percentage of degrees earned by Asian students at $14.4 \%$ ). Black students earned $3.0 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Architecture granted in Massachusetts. This was lower than the national average of $3.7 \%$ for degrees earned by Black students and lower than the percentage in four of the comparison states (Virginia had the highest percentage of degrees earned by Black students at 6.8\%). Hispanic students earned $3.1 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Architecture granted in Massachusetts. This was lower than the national average of $6.1 \%$ for degrees earned by Hispanic students and lower than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Hispanic students at $9.1 \%$ ). White students earned $42.0 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Architecture granted in Massachusetts. This was lower than the national average of $57.5 \%$ for degrees earned by White students and lower than the percentage in eight of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 88.8\%).

In 2008, $0.5 \%$ of all Doctor's and First Professional Degrees granted in Massachusetts were in Architecture. This percentage was higher than the national average ( $0.1 \%$ ) and higher than the percentage in all of the nine comparison states. Among female students in Massachusetts, the percentage was $0.4 \%$. This was higher than the national average among female students ( $0.1 \%$ ) and higher than in all of the comparison states. Among male students in Massachusetts, the percentage was $0.6 \%$. This was higher than the national average among male students ( $0.1 \%$ ) and higher than in all of the comparison states. Among Asian students in Massachusetts, the percentage was $0.1 \%$. This was lower than the national average among Asian students ( $0.2 \%$ ) but higher than in seven of the comparison states (New Jersey had the highest percentage among Asian students at 0.4\%). Among Black students in Massachusetts, the percentage was $0.3 \%$. This was higher than the national average among Black students ( $0.1 \%$ ) and higher than in all of the comparison states. Among Hispanic students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among Hispanic students ( $0.1 \%$ ) and lower than in three of the comparison states (North Carolina had the highest percentage among Hispanic students at 1.2\%). Among White students in Massachusetts, the percentage was $0.2 \%$. This was higher than the national average among White students (0.1\%) and higher than in five of the comparison states (Massachusetts, New Jersey, North Carolina, and Virginia had the highest percentage among White students at $0.2 \%$ ).

In 2008, female students earned $41.7 \%$ of the Doctor's and First Professional Degrees in Architecture granted in Massachusetts. This was lower than the national average of $48.2 \%$ for degrees earned by female students and lower than the percentage in four of the nine comparison states (Virginia had the highest percentage of degrees earned by female students at 77.8\%). Male students earned 58.3\% of the Doctor's and First Professional Degrees in Architecture granted in Massachusetts. This was higher than the national average of $51.8 \%$ for degrees earned by male students and higher than the percentage in four of the comparison states (Illinois had the highest percentage of degrees earned by male students at 63.6\%). Asian students earned $2.8 \%$ of the Doctor's and First Professional Degrees in Architecture granted in Massachusetts. This was lower than the national average of $11.6 \%$ for degrees earned by Asian students but higher than the percentage in five of the comparison states (New Jersey had the highest percentage of degrees earned by Asian students at 20.0\%). Black students earned 2.8\% of the Doctor's and First Professional Degrees in Architecture granted in Massachusetts.

Research and Evaluation Group
Indicator 17: Number of college students who complete
degrees in Architecture

This was lower than the national average of $4.5 \%$ for degrees earned by Black students but higher than the percentage in six of the comparison states (New York had the highest percentage of degrees earned by Black students at $7.7 \%$ ). Hispanic students earned $0.0 \%$ of the Doctor's and First Professional Degrees in Architecture granted in Massachusetts. This was lower than the national average of $2.5 \%$ for degrees earned by Hispanic students and lower than the percentage in three of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 11.1\%). White students earned 25.0\% of the Doctor's and First Professional Degrees in Architecture granted in Massachusetts. This was lower than the national average of $29.1 \%$ for degrees earned by White students and lower than the percentage in five of the comparison states (Virginia had the highest percentage of degrees earned by White students at 55.6\%).

## Technical Notes

The Integrated Post-Secondary Education Data System (IPEDS) is maintained by the National Center for Education Statistics (NCES-a division of the U.S. Department of Education) and annually collects data from every college, university, and technical and vocational institution that participates in U.S. federal student financial aid programs (such as Pell grants and federal student loans). The Higher Education Act of 1965, as amended, requires that institutions that participate in federal student aid programs report data on enrollments, program completions, graduation rates, faculty and staff, finances, institutional prices, and student financial aid. The home page for NCES is: http://www.nces.ed.gov/. The home page for IPEDS is: http://nces.ed.gov/ipeds/.

## Summary

In 2008, $0.2 \%$ of all Associate's Degrees and Certificates below Bachelor's Degrees granted in Massachusetts were in Biological and Biomedical Sciences. This percentage was equal to the national average ( $0.2 \%$ ) but higher than in six of the nine comparison states (California had the highest percentage at $0.5 \%$ ). Among female students in Massachusetts, the percentage was $0.2 \%$. This was equal to the national average among female students ( $0.2 \%$ ) and higher than in six of the comparison states (California had the highest percentage among female students at 0.6\%). Among male students in Massachusetts, the percentage was $0.4 \%$. This was higher than the national average among male students ( $0.1 \%$ ) and higher than in all of the comparison states. Among Asian students in Massachusetts, the percentage was $0.7 \%$. This was higher than the national average among Asian students ( $0.6 \%$ ) and higher than in eight of the comparison states (California had the highest percentage among Asian students at 1.1\%). Among Black students in Massachusetts, the percentage was $0.5 \%$. This was higher than the national average among Black students ( $0.1 \%$ ) and higher than in seven of the comparison states (California had the highest percentage among Black students at 0.6\%). Among Hispanic students in Massachusetts, the percentage was $0.3 \%$. This was higher than the national average among Hispanic students ( $0.2 \%$ ) and higher than in eight of the comparison states (New Jersey had the highest percentage among Hispanic students at 0.4\%). Among White students in Massachusetts, the percentage was $0.1 \%$. This was equal to the national average among White students ( $0.1 \%$ ) but higher than in five of the comparison states (California had the highest percentage among White students at 0.5\%).

In 2008, female students earned 49.0\% of the Associate's Degrees and Certificates below Bachelor's degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $70.0 \%$ for degrees earned by female students and lower than the percentage in eight of the nine comparison states (Connecticut had the highest percentage of degrees earned by female students at 100.0\%). Male students earned 51.0\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was higher than the national average of $30.0 \%$ for degrees earned by male students and higher than the percentage in all of the comparison states. Asian students earned 11.8\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $15.6 \%$ for degrees earned by Asian students but higher than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Asian students at 31.5\%). Black students earned $21.6 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was higher than the national average of $9.5 \%$ for degrees earned by Black students and higher than the percentage in six of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 57.1\%). Hispanic students earned 9.8\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $15.2 \%$ for degrees earned by Hispanic students but higher than the percentage in seven of the comparison states (New Jersey had the highest percentage of degrees earned by Hispanic students at 22.2\%). White students earned $19.6 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $49.4 \%$ for degrees earned by White students and lower than the percentage in eight of the comparison states (Connecticut had the highest percentage of degrees earned by White students at 100.0\%).

In 2008, 4.7\% of all Bachelor's degrees granted in Massachusetts were in Biological and Biomedical Sciences. This percentage was lower than the national average (4.9\%) and lower than the percentage in five of the nine comparison states (California had the highest percentage at 6.3\%). Among female students in Massachusetts, the percentage was $5.2 \%$. This was higher than the national average among female students (5.0\%) but lower than in five of the comparison states (California had the highest percentage among female students at 6.4\%). Among male students in Massachusetts, the percentage was $4.2 \%$. This was lower than the national average among male students (4.6\%) and lower than in four of the comparison states (California had the highest percentage among male

Indicator 18: Number of college students who complete degrees in Biological and Biomedical Sciences
students at 6.3\%). Among Asian students in Massachusetts, the percentage was $10.8 \%$. This was lower than the national average among Asian students (11.6\%) and lower than in six of the comparison states (New Jersey had the highest percentage among Asian students at 15.7\%). Among Black students in Massachusetts, the percentage was $4.4 \%$. This was higher than the national average among Black students (4.0\%) and higher than in seven of the comparison states (Minnesota had the highest percentage among Black students at 5.7\%). Among Hispanic students in Massachusetts, the percentage was $4.4 \%$. This was higher than the national average among Hispanic students (4.3\%) and higher than in seven of the comparison states (North Carolina had the highest percentage among Hispanic students at $6.9 \%$ ). Among White students in Massachusetts, the percentage was $4.2 \%$. This was lower than the national average among White students (4.5\%) and lower than in five of the comparison states (Minnesota had the highest percentage among White students at 5.7\%).

In 2008, female students earned 63.0\% of the Bachelor's degrees in Biological and Biomedical Sciences granted in Massachusetts. This was higher than the national average of $59.5 \%$ for degrees earned by female students and higher than the percentage in seven of the nine comparison states (Virginia had the highest percentage of degrees earned by female students at 65.2\%). Male students earned $37.0 \%$ of the Bachelor's degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $40.5 \%$ for degrees earned by male students and lower than the percentage in seven of the comparison states (Minnesota had the highest percentage of degrees earned by male students at 42.6\%). Asian students earned 16.4\% of the Bachelor's degrees in Biological and Biomedical Sciences granted in Massachusetts. This was higher than the national average of $15.6 \%$ for degrees earned by Asian students and higher than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Asian students at $42.5 \%$ ). Black students earned $5.1 \%$ of the Bachelor's degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $7.2 \%$ for degrees earned by Black students and lower than the percentage in five of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 14.0\%). Hispanic students earned 4.6\% of the Bachelor's degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $7.3 \%$ for degrees earned by Hispanic students but higher than the percentage in five of the comparison states (New Jersey had the highest percentage of degrees earned by Hispanic students at 10.5\%). White students earned 59.1\% of the Bachelor's degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $61.3 \%$ for degrees earned by White students and lower than the percentage in six of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 80.9\%).

In 2008, 1.8\% of all Certificates above Bachelor's Degrees and Master's Degrees granted in Massachusetts were in Biological and Biomedical Sciences. This percentage was higher than the national average (1.5\%) and higher than the percentage in six of the nine comparison states (Connecticut had the highest percentage at 2.7\%). Among female students in Massachusetts, the percentage was $1.7 \%$. This was higher than the national average among female students (1.4\%) and higher than in five of the comparison states (Connecticut had the highest percentage among female students at 2.7\%). Among male students in Massachusetts, the percentage was $1.9 \%$. This was higher than the national average among male students (1.6\%) and higher than in six of the comparison states (Connecticut had the highest percentage among male students at 2.7\%). Among Asian students in Massachusetts, the percentage was $4.8 \%$. This was higher than the national average among Asian students (3.1\%) and higher than in six of the comparison states (Connecticut had the highest percentage among Asian students at $8.1 \%$ ). Among Black students in Massachusetts, the percentage was $1.2 \%$. This was higher than the national average among Black students ( $0.9 \%$ ) and higher than in five of the comparison states (Connecticut had the highest percentage among Black students at 2.1\%). Among Hispanic students in Massachusetts, the percentage was $2.5 \%$. This was higher than the national average among Hispanic students (1.2\%) and higher than in seven of the comparison states (Pennsylvania had the highest percentage among Hispanic students at 3.3\%). Among White students in Massachusetts, the percentage was $1.3 \%$. This was lower than the national average among White students (1.4\%) and lower than in four of the comparison states (Connecticut had the highest

UMass Donahue Institute
Indicator 18: Number of college students who complete degrees in Biological and Biomedical Sciences
percentage among White students at $2.3 \%$ ).
In 2008, female students earned 58.7\% of the Certificates above Bachelor's Degrees and Master's Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was higher than the national average of $57.5 \%$ for degrees earned by female students and higher than the percentage in five of the nine comparison states (North Carolina had the highest percentage of degrees earned by female students at 63.4\%). Male students earned 41.3\% of the Certificates above Bachelor's Degrees and Master's Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of 42.5\% for degrees earned by male students and lower than the percentage in five of the comparison states (Pennsylvania had the highest percentage of degrees earned by male students at 46.8\%). Asian students earned $14.3 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was higher than the national average of $10.9 \%$ for degrees earned by Asian students and higher than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Asian students at 20.9\%). Black students earned 3.7\% of the Certificates above Bachelor's Degrees and Master's Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $5.6 \%$ for degrees earned by Black students and lower than the percentage in six of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 11.6\%). Hispanic students earned 4.2\% of the Certificates above Bachelor's Degrees and Master's Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $4.9 \%$ for degrees earned by Hispanic students but higher than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Hispanic students at $8.2 \%$ ). White students earned $37.4 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $54.0 \%$ for degrees earned by White students and lower than the percentage in all of the comparison states (North Carolina had the highest percentage of degrees earned by White students at 73.6\%).

In 2008, 5.6\% of all Doctor's and First Professional Degrees granted in Massachusetts were in Biological and Biomedical Sciences. This percentage was higher than the national average (4.5\%) and higher than the percentage in six of the nine comparison states (North Carolina had the highest percentage at $8.0 \%$ ). Among female students in Massachusetts, the percentage was $5.4 \%$. This was higher than the national average among female students (4.5\%) and higher than in six of the comparison states (North Carolina had the highest percentage among female students at 8.8\%). Among male students in Massachusetts, the percentage was $5.7 \%$. This was higher than the national average among male students (4.4\%) and higher than in seven of the comparison states (Connecticut had the highest percentage among male students at 7.3\%). Among Asian students in Massachusetts, the percentage was $4.2 \%$. This was higher than the national average among Asian students (3.9\%) and higher than in six of the comparison states (North Carolina had the highest percentage among Asian students at 9.6\%). Among Black students in Massachusetts, the percentage was 1.6\%. This was lower than the national average among Black students (2.4\%) and lower than in six of the comparison states (North Carolina had the highest percentage among Black students at 7.5\%). Among Hispanic students in Massachusetts, the percentage was $6.0 \%$. This was higher than the national average among Hispanic students (3.2\%) and higher than in eight of the comparison states (North Carolina had the highest percentage among Hispanic students at 7.0\%). Among White students in Massachusetts, the percentage was $4.6 \%$. This was higher than the national average among White students (3.7\%) and higher than in six of the comparison states (North Carolina had the highest percentage among White students at 7.8\%).

In 2008, female students earned 49.6\% of the Doctor's and First Professional Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $50.8 \%$ for degrees earned by female students and lower than the percentage in seven of the nine comparison states (North Carolina had the highest percentage of degrees earned by female students at 57.6\%). Male students earned 50.4\% of the Doctor's and First Professional Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was higher than the national average of 49.2\%

Research and Evaluation Group
Indicator 18: Number of college students who complete degrees in Biological and Biomedical Sciences
for degrees earned by male students and higher than the percentage in seven of the comparison states (Illinois had the highest percentage of degrees earned by male students at 56.3\%). Asian students earned $8.7 \%$ of the Doctor's and First Professional Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was higher than the national average of $8.0 \%$ for degrees earned by Asian students and higher than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Asian students at 15.2\%). Black students earned $1.2 \%$ of the Doctor's and First Professional Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $3.2 \%$ for degrees earned by Black students and lower than the percentage in all of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at $9.3 \%$ ). Hispanic students earned $3.6 \%$ of the Doctor's and First Professional Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was equal to the national average of $1.6 \%$ for degrees earned by Hispanic students but higher than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 5.5\%). White students earned 42.9\% of the Doctor's and First Professional Degrees in Biological and Biomedical Sciences granted in Massachusetts. This was lower than the national average of $49.2 \%$ for degrees earned by White students and lower than the percentage in seven of the comparison states (North Carolina had the highest percentage of degrees earned by White students at 64.8\%).

## Technical Notes

The Integrated Post-Secondary Education Data System (IPEDS) is maintained by the National Center for Education Statistics (NCES-a division of the U.S. Department of Education) and annually collects data from every college, university, and technical and vocational institution that participates in U.S. federal student financial aid programs (such as Pell grants and federal student loans). The Higher Education Act of 1965, as amended, requires that institutions that participate in federal student aid programs report data on enrollments, program completions, graduation rates, faculty and staff, finances, institutional prices, and student financial aid. The home page for NCES is: http://www.nces.ed.gov/. The home page for IPEDS is: http://nces.ed.gov/ipeds/.

## Indicator 19: Number of college students who complete degrees in Computer and Information Sciences

Table III - 217: Number of Associate's Degrees and Certificates Below Bachelor's Degrees in Computer and Information
Sciences - All Students (MASSIP 2009 Indicator 19)

| Type | Year | MA | US | CA | CT | IL | MN | NJ | NY | NC | PA | VA |

## Summary

In 2008, 4.0\% of all Associate's Degrees and Certificates below Bachelor's Degrees granted in Massachusetts were in Computer and Information Sciences. This percentage was higher than the national average (3.3\%) and higher than in six of the nine comparison states (Virginia had the highest percentage at $7.1 \%$ ). Among female students in Massachusetts, the percentage was $2.2 \%$. This was higher than the national average among female students (1.6\%) and higher than in seven of the comparison states (Virginia had the highest percentage among female students at 4.3\%). Among male students in Massachusetts, the percentage was $7.9 \%$. This was higher than the national average among male students (6.0\%) and higher than in seven of the comparison states (Virginia had the highest percentage among male students at 12.8\%). Among Asian students in Massachusetts, the percentage was $3.5 \%$. This was lower than the national average among Asian students (4.1\%) and lower than in five of the comparison states (Virginia had the highest percentage among Asian students at $8.3 \%$ ). Among Black students in Massachusetts, the percentage was $7.4 \%$. This was higher than the national average among Black students (3.6\%) and higher than in eight of the comparison states (Virginia had the highest percentage among Black students at 8.6\%). Among Hispanic students in Massachusetts, the percentage was $5.5 \%$. This was higher than the national average among Hispanic students (2.7\%) and higher than in seven of the comparison states (Virginia had the highest percentage among Hispanic students at $9.2 \%$ ). Among White students in Massachusetts, the percentage was $3.5 \%$. This was higher than the national average among White students (3.2\%) and higher than in five of the comparison states (Virginia had the highest percentage among White students at 6.1\%).

In 2008, female students earned $37.5 \%$ of the Associate's Degrees and Certificates below Bachelor's degrees in Computer and Information Sciences granted in Massachusetts. This was higher than the national average of $29.9 \%$ for degrees earned by female students and higher than the percentage in eight of the nine comparison states (Virginia had the highest percentage of degrees earned by female students at 39.8\%). Male students earned 62.5\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Computer and Information Sciences granted in Massachusetts. This was lower than the national average of $70.1 \%$ for degrees earned by male students and lower than the percentage in eight of the comparison states (Connecticut had the highest percentage of degrees earned by male students at $82.6 \%$ ). Asian students earned $3.4 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Computer and Information Sciences granted in Massachusetts. This was lower than the national average of $5.8 \%$ for degrees earned by Asian students and lower than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Asian students at 23.8\%). Black students earned $17.9 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Computer and Information Sciences granted in Massachusetts. This was higher than the national average of $16.0 \%$ for degrees earned by Black students and lower than the percentage in five of the comparison states (Virginia had the highest percentage of degrees earned by Black students at 32.5\%). Hispanic students earned 12.5\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Computer and Information Sciences granted in Massachusetts. This was higher than the national average of $12.4 \%$ for degrees earned by Hispanic students and higher than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 21.2\%). White students earned $54.2 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Computer and Information Sciences granted in Massachusetts. This was lower than the national average of $56.4 \%$ for degrees earned by White students and lower than the percentage in five of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 80.0\%).

In 2008, 2.0\% of all Bachelor's degrees granted in Massachusetts were in Computer and Information Sciences. This percentage was lower than the national average ( $2.4 \%$ ) and lower than the percentage in seven of the nine comparison states (Illinois and Pennsylvania had the highest percentage at 3.0\%). Among female students in Massachusetts, the percentage was $0.6 \%$. This was lower than the national average among female students ( $0.7 \%$ ) and lower than in five of the comparison states (Illinois and Pennsylvania had the highest percentage among female students at 1.0\%). Among male students in Massachusetts, the percentage was $4.0 \%$. This was lower than the national average among male

UMass Donahue Institute Research and Evaluation Group
students (4.6\%) and lower than in seven of the comparison states (Illinois had the highest percentage among male students at 5.8\%). Among Asian students in Massachusetts, the percentage was $1.9 \%$. This was lower than the national average among Asian students (2.8\%) and lower than in eight of the comparison states (Illinois had the highest percentage among Asian students at 3.5\%). Among Black students in Massachusetts, the percentage was $1.8 \%$. This was lower than the national average among Black students (2.2\%) and lower than in seven of the comparison states (Illinois and Minnesota had the highest percentage among Black students at 3.7\%). Among Hispanic students in Massachusetts, the percentage was $1.7 \%$. This was lower than the national average among Hispanic students (2.1\%) and lower than in seven of the comparison states (Pennsylvania had the highest percentage among Hispanic students at 2.8\%). Among White students in Massachusetts, the percentage was $2.9 \%$. This was lower than the national average among White students (3.9\%) and lower than in five of the comparison states (Illinois had the highest percentage among White students at 5.5\%).

In 2008, female students earned 17.4\% of the Bachelor's degrees in Computer and Information Sciences granted in Massachusetts. This was lower than the national average of $17.8 \%$ for degrees earned by female students and lower than the percentage in five of the nine comparison states (North Carolina had the highest percentage of degrees earned by female students at 20.6\%). Male students earned $82.6 \%$ of the Bachelor's degrees in Computer and Information Sciences granted in Massachusetts. This was higher than the national average of $82.2 \%$ for degrees earned by male students and higher than the percentage in five of the comparison states (California had the highest percentage of degrees earned by male students at 85.8\%). Asian students earned $12.0 \%$ of the Bachelor's degrees in Computer and Information Sciences granted in Massachusetts. This was higher than the national average of $8.1 \%$ for degrees earned by Asian students and higher than the percentage in seven of the comparison states (California had the highest percentage of degrees earned by Asian students at 22.8\%). Black students earned $5.0 \%$ of the Bachelor's degrees in Computer and Information Sciences granted in Massachusetts. This was lower than the national average of $10.2 \%$ for degrees earned by Black students and lower than the percentage in five of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 23.9\%). Hispanic students earned 4.3\% of the Bachelor's degrees in Computer and Information Sciences granted in Massachusetts. This was lower than the national average of $7.5 \%$ for degrees earned by Hispanic students but higher than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 14.5\%). White students earned $56.4 \%$ of the Bachelor's degrees in Computer and Information Sciences granted in Massachusetts. This was lower than the national average of $59.7 \%$ for degrees earned by White students and lower than the percentage in six of the comparison states (Pennsylvania had the highest percentage of degrees earned by White students at 74.3\%).

In 2008, 2.8\% of all Certificates above Bachelor's Degrees and Master's Degrees granted in Massachusetts were in Computer and Information Sciences. This percentage was higher than the national average (2.7\%) but lower than the percentage in five of the nine comparison states (Illinois had the highest percentage at 4.7\%). Among female students in Massachusetts, the percentage was $1.1 \%$. This was lower than the national average among female students (1.2\%) and lower than in six of the comparison states (New Jersey had the highest percentage among female students at 2.2\%). Among male students in Massachusetts, the percentage was $5.6 \%$. This was higher than the national average among male students (5.0\%) but lower than in five of the comparison states (Illinois had the highest percentage among male students at $8.6 \%$ ). Among Asian students in Massachusetts, the percentage was $4.3 \%$. This was lower than the national average among Asian students (4.8\%) and lower than in six of the comparison states (Minnesota had the highest percentage among Asian students at 8.2\%). Among Black students in Massachusetts, the percentage was $1.0 \%$. This was lower than the national average among Black students (1.7\%) and lower than in all of the comparison states (Minnesota had the highest percentage among Black students at 3.9\%). Among Hispanic students in Massachusetts, the percentage was $1.8 \%$. This was higher than the national average among Hispanic students (1.3\%) and higher than in five of the comparison states (Minnesota had the highest percentage among Hispanic students at 3.3\%). Among White students in Massachusetts, the percentage was $1.8 \%$. This

UMass Donahue Institute
Research and Evaluation Group
Indicator 19: Number of college students who complete degrees in Computer and Information Sciences
was higher than the national average among White students (1.5\%) and higher than in seven of the comparison states (Illinois had the highest percentage among White students at 2.0\%).

In 2008, female students earned $23.7 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Computer and Information Sciences granted in Massachusetts. This was lower than the national average of $26.8 \%$ for degrees earned by female students and lower than the percentage in eight of the nine comparison states (New Jersey had the highest percentage of degrees earned by female students at $31.1 \%$ ). Male students earned $76.3 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Computer and Information Sciences granted in Massachusetts. This was higher than the national average of $73.2 \%$ for degrees earned by male students and higher than the percentage in eight of the comparison states (California had the highest percentage of degrees earned by male students at $76.9 \%$ ). Asian students earned $8.0 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Computer and Information Sciences granted in Massachusetts. This was lower than the national average of $9.3 \%$ for degrees earned by Asian students and lower than the percentage in seven of the comparison states (California had the highest percentage of degrees earned by Asian students at $17.7 \%$ ). Black students earned $2.0 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Computer and Information Sciences granted in Massachusetts. This was lower than the national average of $5.9 \%$ for degrees earned by Black students and lower than the percentage in all of the comparison states (Minnesota had the highest percentage of degrees earned by Black students at 10.1\%). Hispanic students earned 1.9\% of the Certificates above Bachelor's Degrees and Master's Degrees in Computer and Information Sciences granted in Massachusetts. This was lower than the national average of $2.9 \%$ for degrees earned by Hispanic students but higher than the percentage in five of the comparison states (Minnesota had the highest percentage of degrees earned by Hispanic students at $3.0 \%$ ). White students earned $32.4 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Computer and Information Sciences granted in Massachusetts. This was higher than the national average of $31.2 \%$ for degrees earned by White students and higher than the percentage in six of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 47.1\%).

In 2008, 1.3\% of all Doctor's and First Professional Degrees granted in Massachusetts were in Computer and Information Sciences. This percentage was higher than the national average (1.1\%) and higher than the percentage in six of the nine comparison states (Pennsylvania had the highest percentage at $1.8 \%$ ). Among female students in Massachusetts, the percentage was $0.5 \%$. This was equal to the national average among female students (0.5\%) but higher than in five of the comparison states (Pennsylvania had the highest percentage among female students at 0.9\%). Among male students in Massachusetts, the percentage was $2.2 \%$. This was higher than the national average among male students (1.7\%) and higher than in seven of the comparison states (Pennsylvania had the highest percentage among male students at 2.8\%). Among Asian students in Massachusetts, the percentage was $0.7 \%$. This was higher than the national average among Asian students ( $0.6 \%$ ) and higher than in five of the comparison states (North Carolina had the highest percentage among Asian students at $3.5 \%$ ). Among Black students in Massachusetts, the percentage was $0.6 \%$. This was higher than the national average among Black students (0.3\%) and higher than in eight of the comparison states (Pennsylvania had the highest percentage among Black students at 0.7\%). Among Hispanic students in Massachusetts, the percentage was $0.8 \%$. This was higher than the national average among Hispanic students ( $0.2 \%$ ) and higher than in eight of the comparison states (North Carolina had the highest percentage among Hispanic students at 1.2\%). Among White students in Massachusetts, the percentage was $1.0 \%$. This was higher than the national average among White students ( $0.5 \%$ ) and higher than in all of the comparison states.

In 2008, female students earned 19.0\% of the Doctor's and First Professional Degrees in Computer and Information Sciences granted in Massachusetts. This was lower than the national average of 22.1\% for degrees earned by female students and lower than the percentage in seven of the nine comparison states (New Jersey had the highest percentage of degrees earned by female students at 30.0\%). Male students earned 81.0\% of the Doctor's and First Professional Degrees in Computer and Information Sciences granted in Massachusetts. This was higher than the national average of 77.9\%
for degrees earned by male students and higher than the percentage in seven of the comparison states (Virginia had the highest percentage of degrees earned by male students at 82.9\%). Asian students earned 6.0\% of the Doctor's and First Professional Degrees in Computer and Information Sciences granted in Massachusetts. This was higher than the national average of $5.1 \%$ for degrees earned by Asian students and higher than the percentage in five of the comparison states (North Carolina had the highest percentage of degrees earned by Asian students at 18.2\%). Black students earned $2.0 \%$ of the Doctor's and First Professional Degrees in Computer and Information Sciences granted in Massachusetts. This was higher than the national average of $1.5 \%$ for degrees earned by Black students and higher than the percentage in six of the comparison states (Virginia had the highest percentage of degrees earned by Black students at 2.9\%). Hispanic students earned $2.0 \%$ of the Doctor's and First Professional Degrees in Computer and Information Sciences granted in Massachusetts. This was higher than the national average of $0.9 \%$ for degrees earned by Hispanic students and higher than the percentage in eight of the comparison states (North Carolina had the highest percentage of degrees earned by Hispanic students at 2.3\%). White students earned 37.0\% of the Doctor's and First Professional Degrees in Computer and Information Sciences granted in Massachusetts. This was higher than the national average of $26.4 \%$ for degrees earned by White students and higher than the percentage in all of the comparison states.

## Technical Notes

The Integrated Post-Secondary Education Data System (IPEDS) is maintained by the National Center for Education Statistics (NCES-a division of the U.S. Department of Education) and annually collects data from every college, university, and technical and vocational institution that participates in U.S. federal student financial aid programs (such as Pell grants and federal student loans). The Higher Education Act of 1965, as amended, requires that institutions that participate in federal student aid programs report data on enrollments, program completions, graduation rates, faculty and staff, finances, institutional prices, and student financial aid. The home page for NCES is: http://www.nces.ed.gov/. The home page for IPEDS is: http://nces.ed.gov/ipeds/.

## Indicator 20: Number of college students who complete degrees in Engineering and Engineering Technologies/Technicians

## Summary

In 2008, 4.6\% of all Associate's Degrees and Certificates below Bachelor's Degrees granted in Massachusetts were in Engineering and Engineering Technologies/Technicians. This percentage was higher than the national average (3.7\%) and higher than in eight of the nine comparison states (Massachusetts was tied with Pennsylvania for the highest percentage at 4.6\%). Among female students in Massachusetts, the percentage was $0.7 \%$. This was lower than the national average among female students ( $0.8 \%$ ) and lower than in five of the comparison states (Virginia had the highest percentage among female students at 1.1\%). Among male students in Massachusetts, the percentage was $13.0 \%$. This was higher than the national average among male students (8.5\%) and higher than in all of the comparison states. Among Asian students in Massachusetts, the percentage was $7.8 \%$. This was higher than the national average among Asian students (3.1\%) and higher than in all of the comparison states. Among Black students in Massachusetts, the percentage was 5.5\%. This was higher than the national average among Black students (2.9\%) and higher than in all of the comparison states. Among Hispanic students in Massachusetts, the percentage was $5.4 \%$. This was higher than the national average among Hispanic students (4.6\%) and higher than in eight of the comparison states (Virginia had the highest percentage among Hispanic students at 5.7\%). Among White students in Massachusetts, the percentage was $4.6 \%$. This was higher than the national average among White students (4.0\%) and higher than in seven of the comparison states (Pennsylvania had the highest percentage among White students at $5.6 \%$ ).

In 2008, female students earned 10.7\% of the Associate's Degrees and Certificates below Bachelor's degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was lower than the national average of $13.7 \%$ for degrees earned by female students and lower than the percentage in five of the nine comparison states (Virginia had the highest percentage of degrees earned by female students at 18.3\%). Male students earned 89.3\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was higher than the national average of $86.3 \%$ for degrees earned by male students and higher than the percentage in five of the comparison states (New Jersey had the highest percentage of degrees earned by male students at $90.3 \%$ ). Asian students earned $6.5 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was higher than the national average of $3.8 \%$ for degrees earned by Asian students and higher than the percentage in eight of the comparison states (California had the highest percentage of degrees earned by Asian students at 11.2\%). Black students earned 11.6\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was higher than the national average of $11.2 \%$ for degrees earned by Black students but lower than the percentage in five of the comparison states (Virginia had the highest percentage of degrees earned by Black students at 26.0\%). Hispanic students earned 10.6\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was lower than the national average of $18.1 \%$ for degrees earned by Hispanic students but higher than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 42.3\%). White students earned $61.8 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Engineering and Engineering Technologies/Technicians granted in but lower than the percentage in five of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 86.3\%).

In 2008, $5.5 \%$ of all Bachelor's degrees granted in Massachusetts were in Engineering and Engineering Technologies/Technicians. This percentage was higher than the national average (5.1\%) and higher than the percentage in seven of the nine comparison states (Pennsylvania had the highest percentage at $5.8 \%$ ). Among female students in Massachusetts, the percentage was $2.3 \%$. This was higher than the national average among female students (1.5\%) and higher than in all of the comparison states. Among male students in Massachusetts, the percentage was $10.0 \%$. This was equal to the national average among male students (10.0\%) but higher than in five of the comparison states (Pennsylvania and Virginia had the highest percentage among male students at 10.9\%). Among Asian students in

UMass Donahue Institute
Research and Evaluation Group

Massachusetts, the percentage was $9.0 \%$. This was higher than the national average among Asian students (8.5\%) and higher than in five of the comparison states (North Carolina had the highest percentage among Asian students at 11.2\%). Among Black students in Massachusetts, the percentage was $4.3 \%$. This was higher than the national average among Black students (3.0\%) and higher than in all of the comparison states. Among Hispanic students in Massachusetts, the percentage was 5.9\%. This was higher than the national average among Hispanic students (4.7\%) and higher than in all of the comparison states. Among White students in Massachusetts, the percentage was 5.3\%. This was higher than the national average among White students (5.1\%) and higher than in seven of the comparison states (Pennsylvania had the highest percentage among White students at 5.7\%).

In 2008, female students earned 23.9\% of the Bachelor's degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was higher than the national average of $17.1 \%$ for degrees earned by female students and higher than the percentage in all of the nine comparison states. Male students earned 76.1\% of the Bachelor's degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was lower than the national average of $82.9 \%$ for degrees earned by male students and lower than the percentage in all of the comparison states (Illinois had the highest percentage of degrees earned by male students at 84.5\%). Asian students earned 11.8\% of the Bachelor's degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was higher than the national average of $10.8 \%$ for degrees earned by Asian students but lower than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Asian students at 35.0\%). Black students earned 4.3\% of the Bachelor's degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was lower than the national average of $5.2 \%$ for degrees earned by Black students and lower than the percentage in six of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 11.4\%). Hispanic students earned $5.3 \%$ of the Bachelor's degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was lower than the national average of $7.5 \%$ for degrees earned by Hispanic students but higher than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 13.1\%). White students earned 63.8\% of the Bachelor's degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was lower than the national average of $65.8 \%$ for degrees earned by White students and lower than the percentage in five of the comparison states (Pennsylvania had the highest percentage of degrees earned by White students at 78.2\%).

In 2008, 5.0\% of all Certificates above Bachelor's Degrees and Master's Degrees granted in Massachusetts were in Engineering and Engineering Technologies/Technicians. This percentage was lower than the national average ( $5.4 \%$ ) and lower than the percentage in six of the nine comparison states (New Jersey had the highest percentage at 8.9\%). Among female students in Massachusetts, the percentage was $2.1 \%$. This was lower than the national average among female students (2.0\%) and lower than in four of the comparison states (New Jersey had the highest percentage among female students at $3.8 \%$ ). Among male students in Massachusetts, the percentage was $9.4 \%$. This was lower than the national average among male students (10.5\%) and lower than in six of the comparison states (New Jersey had the highest percentage among male students at 15.5\%). Among Asian students in Massachusetts, the percentage was $7.7 \%$. This was lower than the national average among Asian students (10.6\%) and lower than in six of the comparison states (Virginia had the highest percentage among Asian students at 30.1\%). Among Black students in Massachusetts, the percentage was $1.4 \%$. This was lower than the national average among Black students (1.9\%) and lower than in five of the comparison states (North Carolina had the highest percentage among Black students at 5.6\%). Among Hispanic students in Massachusetts, the percentage was 3.8\%. This was higher than the national average among Hispanic students (3.5\%) but lower than in five of the comparison states (New Jersey had the highest percentage among Hispanic students at 9.6\%). Among White students in Massachusetts, the percentage was $3.9 \%$. This was higher than the national average among White students ( $3.5 \%$ ) and higher than in six of the comparison states (Virginia had the highest percentage among White students at 5.5\%).

In 2008, female students earned 26.0\% of the Certificates above Bachelor's Degrees and Master's Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was higher than the national average of $23.0 \%$ for degrees earned by female students and higher than the percentage in eight of the nine comparison states (North Carolina had the highest percentage of degrees earned by female students at 26.4\%). Male students earned 74.0\% of the Certificates above Bachelor's Degrees and Master's Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was lower than the national average of $77.0 \%$ for degrees earned by male students and lower than the percentage in eight of the comparison states (Connecticut had the highest percentage of degrees earned by male students at $81.9 \%$ ). Asian students earned $8.3 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was lower than the national average of $10.2 \%$ for degrees earned by Asian students and lower than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Asian students at 23.0\%). Black students earned $1.7 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was lower than the national average of $3.2 \%$ for degrees earned by Black students and lower than the percentage in eight of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 13.2\%). Hispanic students earned $2.4 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was lower than the national average of $3.8 \%$ for degrees earned by Hispanic students but higher than the percentage in five of the comparison states (New Jersey had the highest percentage of degrees earned by Hispanic students at 6.0\%). White students earned $40.8 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was higher than the national average of $36.9 \%$ for degrees earned by White students and higher than the percentage in six of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 53.3\%).

In 2008, $6.0 \%$ of all Doctor's and First Professional Degrees granted in Massachusetts were in Engineering and Engineering Technologies/Technicians. This percentage was higher than the national average ( $5.3 \%$ ) and higher than the percentage in seven of the nine comparison states (California had the highest percentage at $6.7 \%$ ). Among female students in Massachusetts, the percentage was $2.8 \%$. This was higher than the national average among female students (2.2\%) and higher than in seven of the comparison states (New Jersey had the highest percentage among female students at 3.8\%). Among male students in Massachusetts, the percentage was $9.3 \%$. This was higher than the national average among male students (8.3\%) and higher than in seven of the comparison states (California had the highest percentage among male students at 10.2\%). Among Asian students in Massachusetts, the percentage was $4.1 \%$. This was higher than the national average among Asian students (3.5\%) and higher than in six of the comparison states (North Carolina had the highest percentage among Asian students at $12.3 \%$ ). Among Black students in Massachusetts, the percentage was $1.9 \%$. This was higher than the national average among Black students (1.4\%) and higher than in seven of the comparison states (North Carolina had the highest percentage among Black students at 3.9\%). Among Hispanic students in Massachusetts, the percentage was $2.8 \%$. This was higher than the national average among Hispanic students (1.7\%) and higher than in eight of the comparison states (Pennsylvania had the highest percentage among Hispanic students at 4.4\%). Among White students in Massachusetts, the percentage was 3.3\%. This was higher than the national average among White students (2.3\%) and higher than in eight of the comparison states (California had the highest percentage among White students at 3.6\%).

In 2008, female students earned 24.1\% of the Doctor's and First Professional Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was higher than the national average of $21.4 \%$ for degrees earned by female students and higher than the percentage in six of the nine comparison states (New Jersey had the highest percentage of degrees earned by female students at 29.1\%). Male students earned $75.9 \%$ of the Doctor's and First Professional Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was lower than the national average of $78.6 \%$ for degrees earned by male students and lower than the
percentage in six of the comparison states (Minnesota had the highest percentage of degrees earned by male students at 83.2\%). Asian students earned 7.8\% of the Doctor's and First Professional Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was higher than the national average of $6.1 \%$ for degrees earned by Asian students and higher than the percentage in seven of the comparison states (North Carolina had the highest percentage of degrees earned by Asian students at 13.2\%). Black students earned 1.3\% of the Doctor's and First Professional Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was lower than the national average of $1.6 \%$ for degrees earned by Black students but higher than the percentage in five of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 6.6\%). Hispanic students earned $1.6 \%$ of the Doctor's and First Professional Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was equal to the national average of $1.6 \%$ for degrees earned by Hispanic students but higher than the percentage in eight of the comparison states (Pennsylvania had the highest percentage of degrees earned by Hispanic students at 1.9\%). White students earned 29.0\% of the Doctor's and First Professional Degrees in Engineering and Engineering Technologies/Technicians granted in Massachusetts. This was higher than the national average of 26.2\% for degrees earned by White students and higher than the percentage in five of the comparison states (Pennsylvania had the highest percentage of degrees earned by White students at 33.7\%).

## Technical Notes

The Integrated Post-Secondary Education Data System (IPEDS) is maintained by the National Center for Education Statistics (NCES-a division of the U.S. Department of Education) and annually collects data from every college, university, and technical and vocational institution that participates in U.S. federal student financial aid programs (such as Pell grants and federal student loans). The Higher Education Act of 1965, as amended, requires that institutions that participate in federal student aid programs report data on enrollments, program completions, graduation rates, faculty and staff, finances, institutional prices, and student financial aid. The home page for NCES is: http://www.nces.ed.gov/. The home page for IPEDS is: http://nces.ed.gov/ipeds/.

## Summary

In 2008, 34.7\% of all Associate's Degrees and Certificates below Bachelor's Degrees granted in Massachusetts were in Health Professions and Clinical Sciences. This percentage was higher than the national average (31.6\%) and higher than in seven of the nine comparison states (Virginia had the highest percentage at 43.6\%). Among female students in Massachusetts, the percentage was $44.8 \%$. This was higher than the national average among female students (43.3\%) and higher than in five of the comparison states (Virginia had the highest percentage among female students at 53.3\%). Among male students in Massachusetts, the percentage was $13.0 \%$. This was higher than the national average among male students (12.7\%) and higher than in seven of the comparison states (Virginia had the highest percentage among male students at 24.4\%). Among Asian students in Massachusetts, the percentage was $21.0 \%$. This was lower than the national average among Asian students (29.4\%) and lower than in eight of the comparison states (New Jersey had the highest percentage among Asian students at 44.4\%). Among Black students in Massachusetts, the percentage was $35.9 \%$. This was lower than the national average among Black students (37.6\%) and lower than in five of the comparison states (Virginia had the highest percentage among Black students at 51.6\%). Among Hispanic students in Massachusetts, the percentage was $29.4 \%$. This was lower than the national average among Hispanic students ( $32.7 \%$ ) and lower than in five of the comparison states (New Jersey had the highest percentage among Hispanic students at 35.2\%). Among White students in Massachusetts, the percentage was $32.1 \%$. This was higher than the national average among White students (30.3\%) and higher than in seven of the comparison states (Virginia had the highest percentage among White students at 41.6\%).

In 2008, female students earned $88.1 \%$ of the Associate's Degrees and Certificates below Bachelor's degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was higher than the national average of $84.7 \%$ for degrees earned by female students and higher than the percentage in seven of the nine comparison states (North Carolina had the highest percentage of degrees earned by female students at 90.4\%). Male students earned 11.9\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $15.3 \%$ for degrees earned by male students and lower than the percentage in seven of the comparison states (California had the highest percentage of degrees earned by male students at 20.1\%). Asian students earned 2.4\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $4.3 \%$ for degrees earned by Asian students and lower than the percentage in seven of the comparison states (California had the highest percentage of degrees earned by Asian students at 15.9\%). Black students earned $10.1 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $17.5 \%$ for degrees earned by Black students and lower than the percentage in eight of the comparison states (Virginia had the highest percentage of degrees earned by Black students at 31.8\%). Hispanic students earned $7.7 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $15.3 \%$ for degrees earned by Hispanic students and lower than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 34.3\%). White students earned 57.6\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was higher than the national average of $54.5 \%$ for degrees earned by White students and higher than the percentage in six of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 79.8\%).

In 2008, 5.8\% of all Bachelor's degrees granted in Massachusetts were in Health Professions and Clinical Sciences. This percentage was lower than the national average (6.8\%) and lower than the percentage in six of the nine comparison states (Pennsylvania had the highest percentage at $7.9 \%$ ). Among female students in Massachusetts, the percentage was $8.7 \%$. This was lower than the national average among female students (10.2\%) and lower than in seven of the comparison states

UMass Donahue Institute Research and Evaluation Group
(Pennsylvania had the highest percentage among female students at 11.9\%). Among male students in Massachusetts, the percentage was $1.8 \%$. This was lower than the national average among male students (2.4\%) and lower than in five of the comparison states (Pennsylvania had the highest percentage among male students at 2.8\%). Among Asian students in Massachusetts, the percentage was $5.1 \%$. This was lower than the national average among Asian students (6.2\%) and lower than in six of the comparison states (Illinois had the highest percentage among Asian students at 8.2\%). Among Black students in Massachusetts, the percentage was $7.5 \%$. This was lower than the national average among Black students (8.3\%) and lower than in six of the comparison states (New York had the highest percentage among Black students at 11.9\%). Among Hispanic students in Massachusetts, the percentage was $4.5 \%$. This was lower than the national average among Hispanic students (5.6\%) and lower than in five of the comparison states (Pennsylvania had the highest percentage among Hispanic students at $7.2 \%$ ). Among White students in Massachusetts, the percentage was $6.1 \%$. This was lower than the national average among White students (7.0\%) but higher than in five of the comparison states (Pennsylvania had the highest percentage among White students at 8.1\%).

In 2008, female students earned 87.0\% of the Bachelor's degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was higher than the national average of $85.3 \%$ for degrees earned by female students and higher than the percentage in six of the nine comparison states (Minnesota had the highest percentage of degrees earned by female students at 89.1\%). Male students earned 13.0\% of the Bachelor's degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $14.7 \%$ for degrees earned by male students and lower than the percentage in six of the comparison states (California had the highest percentage of degrees earned by male students at 18.6\%). Asian students earned 6.3\% of the Bachelor's degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was higher than the national average of $5.9 \%$ for degrees earned by Asian students and higher than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Asian students at 24.3\%). Black students earned $7.1 \%$ of the Bachelor's degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $10.7 \%$ for degrees earned by Black students and lower than the percentage in six of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 20.8\%). Hispanic students earned $3.9 \%$ of the Bachelor's degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $6.7 \%$ for degrees earned by Hispanic students but higher than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 15.4\%). White students earned 69.6\% of the Bachelor's degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was higher than the national average of $68.2 \%$ for degrees earned by White students and higher than the percentage in five of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 84.9\%).

In 2008, 9.1\% of all Certificates above Bachelor's Degrees and Master's Degrees granted in Massachusetts were in Health Professions and Clinical Sciences. This percentage was lower than the national average (9.3\%) but higher than the percentage in five of the nine comparison states (Pennsylvania had the highest percentage at 12.9\%). Among female students in Massachusetts, the percentage was $11.5 \%$. This was lower than the national average among female students (12.2\%) but higher than in five of the comparison states (North Carolina had the highest percentage among female students at 17.0\%). Among male students in Massachusetts, the percentage was $5.5 \%$. This was higher than the national average among male students (4.7\%) and higher than in seven of the comparison states (Minnesota had the highest percentage among male students at 7.9\%). Among Asian students in Massachusetts, the percentage was $12.7 \%$. This was higher than the national average among Asian students (11.8\%) but lower than in six of the comparison states (Minnesota had the highest percentage among Asian students at 17.8\%). Among Black students in Massachusetts, the percentage was $6.0 \%$. This was lower than the national average among Black students (9.6\%) and lower than in all of the comparison states (New Jersey and Pennsylvania had the highest percentage among Black students at 13.1\%). Among Hispanic students in Massachusetts, the percentage was 6.7\%. This was lower than the national average among Hispanic students (9.3\%) and lower than in
seven of the comparison states (North Carolina had the highest percentage among Hispanic students at $14.8 \%$ ). Among White students in Massachusetts, the percentage was $9.7 \%$. This was lower than the national average among White students (10.3\%) and lower than in five of the comparison states (North Carolina had the highest percentage among White students at 13.8\%).

In 2008, female students earned 76.9\% of the Certificates above Bachelor's Degrees and Master's Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $80.1 \%$ for degrees earned by female students and lower than the percentage in eight of the nine comparison states (Connecticut had the highest percentage of degrees earned by female students at $83.7 \%$ ). Male students earned $23.1 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was higher than the national average of $19.9 \%$ for degrees earned by male students and higher than the percentage in eight of the comparison states (California had the highest percentage of degrees earned by male students at $23.9 \%$ ). Asian students earned $7.1 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was higher than the national average of $6.7 \%$ for degrees earned by Asian students and higher than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Asian students at 19.4\%). Black students earned $3.8 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $9.4 \%$ for degrees earned by Black students and lower than the percentage in all of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 14.7\%). Hispanic students earned 2.2\% of the Certificates above Bachelor's Degrees and Master's Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $5.9 \%$ for degrees earned by Hispanic students and lower than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 10.7\%). White students earned $54.8 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $64.0 \%$ for degrees earned by White students and lower than the percentage in seven of the comparison states (North Carolina had the highest percentage of degrees earned by White students at 74.7\%).

In 2008, 30.1\% of all Doctor's and First Professional Degrees granted in Massachusetts were in Health Professions and Clinical Sciences. This percentage was lower than the national average (33.4\%) but higher than the percentage in five of the nine comparison states (Pennsylvania had the highest percentage at 48.6\%). Among female students in Massachusetts, the percentage was $36.3 \%$. This was lower than the national average among female students (38.6\%) but higher than in five of the comparison states (Pennsylvania had the highest percentage among female students at 56.0\%). Among male students in Massachusetts, the percentage was $23.6 \%$. This was lower than the national average among male students (28.2\%) and lower than in five of the comparison states (Pennsylvania had the highest percentage among male students at 40.4\%). Among Asian students in Massachusetts, the percentage was 56.8\%. This was lower than the national average among Asian students (54.4\%) but higher than in five of the comparison states (Pennsylvania had the highest percentage among Asian students at $74.4 \%$ ). Among Black students in Massachusetts, the percentage was $37.6 \%$. This was higher than the national average among Black students (29.8\%) and higher than in eight of the comparison states (Pennsylvania had the highest percentage among Black students at 45.8\%). Among Hispanic students in Massachusetts, the percentage was 29.4\%. This was lower than the national average among Hispanic students (31.5\%) and lower than in five of the comparison states (Pennsylvania had the highest percentage among Hispanic students at 48.8\%). Among White students in Massachusetts, the percentage was $29.0 \%$. This was lower than the national average among White students (36.5\%) and lower than in six of the comparison states (Pennsylvania had the highest percentage among White students at 53.2\%).

In 2008, female students earned 61.5\% of the Doctor's and First Professional Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was higher than the national average of $58.2 \%$ for degrees earned by female students and higher than the percentage in eight of the

UMass Donahue Institute
Research and Evaluation Group
nine comparison states (Minnesota had the highest percentage of degrees earned by female students at 62.2\%). Male students earned 38.5\% of the Doctor's and First Professional Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $41.8 \%$ for degrees earned by male students and lower than the percentage in eight of the comparison states (New York had the highest percentage of degrees earned by male students at 43.3\%). Asian students earned 21.8\% of the Doctor's and First Professional Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was higher than the national average of $14.9 \%$ for degrees earned by Asian students and higher than the percentage in five of the comparison states (New Jersey had the highest percentage of degrees earned by Asian students at 33.8\%). Black students earned 5.3\% of the Doctor's and First Professional Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $5.4 \%$ for degrees earned by Black students but higher than the percentage in five of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 8.7\%). Hispanic students earned 3.3\% of the Doctor's and First Professional Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $4.7 \%$ for degrees earned by Hispanic students and lower than the percentage in five of the comparison states (New Jersey had the highest percentage of degrees earned by Hispanic students at 6.3\%). White students earned 50.3\% of the Doctor's and First Professional Degrees in Health Professions and Clinical Sciences granted in Massachusetts. This was lower than the national average of $65.1 \%$ for degrees earned by White students and lower than the percentage in seven of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 77.0\%).

## Technical Notes

The Integrated Post-Secondary Education Data System (IPEDS) is maintained by the National Center for Education Statistics (NCES-a division of the U.S. Department of Education) and annually collects data from every college, university, and technical and vocational institution that participates in U.S. federal student financial aid programs (such as Pell grants and federal student loans). The Higher Education Act of 1965, as amended, requires that institutions that participate in federal student aid programs report data on enrollments, program completions, graduation rates, faculty and staff, finances, institutional prices, and student financial aid. The home page for NCES is: http://www.nces.ed.gov/. The home page for IPEDS is: http://nces.ed.gov/ipeds/.

## Summary

In 2008, 0.0\% of all Associate's Degrees and Certificates below Bachelor's Degrees granted in Massachusetts were in Mathematics and Statistics. This percentage was lower than the national average ( $0.1 \%$ ) and lower than in two of the nine comparison states (California had the highest percentage at $0.2 \%$ ). Among female students in Massachusetts, the percentage was $0.0 \%$. This was equal to the national average among female students ( $0.0 \%$ ) but lower than in one of the comparison states (California had the highest percentage among female students at 0.1\%). Among male students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among male students ( $0.1 \%$ ) and lower than in three of the comparison states (California had the highest percentage among male students at $0.4 \%$ ). Among Asian students in Massachusetts, the percentage was $0.1 \%$. This was lower than the national average among Asian students (0.2\%) and lower than in three of the comparison states (Pennsylvania had the highest percentage among Asian students at $0.4 \%$ ). Among Black students in Massachusetts, the percentage was $0.0 \%$. This was equal to the national average among Black students ( $0.0 \%$ ) but lower than in two of the comparison states (California and New York had the highest percentage among Black students at 0.1\%). Among Hispanic students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among Hispanic students ( $0.1 \%$ ) and lower than in three of the comparison states (California, Connecticut and New York had the highest percentage among Hispanic students at 0.1\%). Among White students in Massachusetts, the percentage was $0.0 \%$. This was equal to the national average among White students ( $0.0 \%$ ) but lower than in one of the comparison states (California had the highest percentage among White students at 0.2\%).

In 2008, female students earned 0.0\% of the Associate's Degrees and Certificates below Bachelor's degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $31.8 \%$ for degrees earned by female students and lower than the percentage in three of the nine comparison states (Pennsylvania had the highest percentage of degrees earned by female students at 50.0\%). Male students earned 100.0\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Mathematics and Statistics granted in Massachusetts. This was higher than the national average of $68.2 \%$ for degrees earned by male students and higher than the percentage in three of the comparison states (Massachusetts, Connecticut, Minnesota, New Jersey, and North Carolina had the highest percentage of degrees earned by male students at 100.0\%). Asian students earned 33.3\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Mathematics and Statistics granted in Massachusetts. This was higher than the national average of $14.9 \%$ for degrees earned by Asian students and higher than the percentage in all of the comparison states. Black students earned 33.3\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Mathematics and Statistics granted in Massachusetts. This was higher than the national average of $5.0 \%$ for degrees earned by Black students and higher than the percentage in six of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 100.0\%). Hispanic students earned 0.0\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of 19.2\% for degrees earned by Hispanic students and lower than the percentage in four of the comparison states (Connecticut had the highest percentage of degrees earned by Hispanic students at 100.0\%). White students earned 33.3\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $46.1 \%$ for degrees earned by White students and lower than the percentage in four of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 100.0\%).

In 2008, 1.5\% of all Bachelor's degrees granted in Massachusetts were in Mathematics and Statistics. This percentage was higher than the national average (1.0\%) and higher than the percentage in all of the nine comparison states. Among female students in Massachusetts, the percentage was $1.2 \%$. This was higher than the national average among female students ( $0.8 \%$ ) and higher than in eight of the comparison states (New Jersey had the highest percentage among female students at 1.4\%). Among male students in Massachusetts, the percentage was $2.0 \%$. This was higher than the national

UMass Donahue Institute
Research and Evaluation Group
average among male students (1.4\%) and higher than in all of the comparison states. Among Asian students in Massachusetts, the percentage was $2.8 \%$. This was higher than the national average among Asian students (1.5\%) and higher than in all of the comparison states. Among Black students in Massachusetts, the percentage was $0.8 \%$. This was higher than the national average among Black students ( $0.6 \%$ ) and higher than in six of the comparison states (Massachusetts, Connecticut, New Jersey, and North Carolina had the highest percentage among Black students at 0.8\%). Among Hispanic students in Massachusetts, the percentage was $1.1 \%$. This was higher than the national average among Hispanic students ( $0.7 \%$ ) and higher than in eight of the comparison states (Massachusetts and Minnesota had the highest percentage among Hispanic students at 1.1\%). Among White students in Massachusetts, the percentage was 1.5\%. This was higher than the national average among White students (1.1\%) and higher than in eight of the comparison states (Massachusetts and New Jersey had the highest percentage among White students at 1.5\%).

In 2008, female students earned 45.4\% of the Bachelor's degrees in Mathematics and Statistics granted in Massachusetts. This was higher than the national average of $43.3 \%$ for degrees earned by female students and higher than the percentage in six of the nine comparison states (New Jersey had the highest percentage of degrees earned by female students at 58.2\%). Male students earned 54.6\% of the Bachelor's degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $56.7 \%$ for degrees earned by male students and lower than the percentage in six of the comparison states (Minnesota had the highest percentage of degrees earned by male students at 64.3\%). Asian students earned $13.0 \%$ of the Bachelor's degrees in Mathematics and Statistics granted in Massachusetts. This was higher than the national average of $9.7 \%$ for degrees earned by Asian students and higher than the percentage in eight of the comparison states (California had the highest percentage of degrees earned by Asian students at 27.5\%). Black students earned $2.9 \%$ of the Bachelor's degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $4.7 \%$ for degrees earned by Black students and lower than the percentage in six of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 13.4\%). Hispanic students earned 3.6\% of the Bachelor's degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $5.7 \%$ for degrees earned by Hispanic students but higher than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 13.5\%). White students earned 63.9\% of the Bachelor's degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $68.6 \%$ for degrees earned by White students and lower than the percentage in seven of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 83.3\%).

In 2008, $0.4 \%$ of all Certificates above Bachelor's Degrees and Master's Degrees granted in Massachusetts were in Mathematics and Statistics. This percentage was lower than the national average ( $0.8 \%$ ) and lower than the percentage in eight of the nine comparison states (Connecticut had the highest percentage at 1.3\%). Among female students in Massachusetts, the percentage was $0.3 \%$. This was lower than the national average among female students ( $0.5 \%$ ) and lower than in eight of the comparison states (Connecticut had the highest percentage among female students at 0.9\%). Among male students in Massachusetts, the percentage was $0.7 \%$. This was lower than the national average among male students (1.1\%) and lower than in eight of the comparison states (Connecticut had the highest percentage among male students at 1.9\%). Among Asian students in Massachusetts, the percentage was $0.7 \%$. This was lower than the national average among Asian students (1.1\%) and lower than in eight of the comparison states (New Jersey had the highest percentage among Asian students at $2.4 \%$ ). Among Black students in Massachusetts, the percentage was $0.1 \%$. This was lower than the national average among Black students ( $0.3 \%$ ) and lower than in seven of the comparison states (Connecticut had the highest percentage among Black students at 0.9\%). Among Hispanic students in Massachusetts, the percentage was $0.1 \%$. This was lower than the national average among Hispanic students ( $0.5 \%$ ) and lower than in eight of the comparison states (North Carolina had the highest percentage among Hispanic students at 1.2\%). Among White students in Massachusetts, the percentage was $0.5 \%$. This was lower than the national average among White students ( $0.6 \%$ ) and lower than in five of the comparison states (North Carolina had the highest

UMass Donahue Institute
Research and Evaluation Group
Indicator 22: Number of college students who complete degrees in Mathematics and Statistics
percentage among White students at 0.9\%).
In 2008, female students earned 43.0\% of the Certificates above Bachelor's Degrees and Master's Degrees in Mathematics and Statistics granted in Massachusetts. This was higher than the national average of $42.1 \%$ for degrees earned by female students but lower than the percentage in five of the nine comparison states (Virginia had the highest percentage of degrees earned by female students at $60.3 \%$ ). Male students earned $57.0 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $57.9 \%$ for degrees earned by male students but higher than the percentage in five of the comparison states (Illinois had the highest percentage of degrees earned by male students at $63.9 \%$ ). Asian students earned 8.5\% of the Certificates above Bachelor's Degrees and Master's Degrees in Mathematics and Statistics granted in Massachusetts. This was higher than the national average of $7.7 \%$ for degrees earned by Asian students and higher than the percentage in six of the comparison states (New Jersey had the highest percentage of degrees earned by Asian students at 16.8\%). Black students earned $0.7 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $3.1 \%$ for degrees earned by Black students and lower than the percentage in eight of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 12.6\%). Hispanic students earned 0.7\% of the Certificates above Bachelor's Degrees and Master's Degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $3.6 \%$ for degrees earned by Hispanic students and lower than the percentage in eight of the comparison states (California had the highest percentage of degrees earned by Hispanic students at $6.7 \%$ ). White students earned 54.2\% of the Certificates above Bachelor's Degrees and Master's Degrees in Mathematics and Statistics granted in Massachusetts. This was higher than the national average of $43.4 \%$ for degrees earned by White students and higher than the percentage in eight of the comparison states (North Carolina had the highest percentage of degrees earned by White students at 63.0\%).

In 2008, 0.8\% of all Doctor's and First Professional Degrees granted in Massachusetts were in Mathematics and Statistics. This percentage was lower than the national average (0.9\%) and lower than the percentage in six of the nine comparison states (North Carolina had the highest percentage at 1.9\%). Among female students in Massachusetts, the percentage was $0.5 \%$. This was equal to the national average among female students ( $0.5 \%$ ) but lower than in three of the comparison states (North Carolina had the highest percentage among female students at 1.6\%). Among male students in Massachusetts, the percentage was $1.1 \%$. This was lower than the national average among male students (1.2\%) and lower than in six of the comparison states (North Carolina had the highest percentage among male students at $2.2 \%$ ). Among Asian students in Massachusetts, the percentage was $0.2 \%$. This was lower than the national average among Asian students ( $0.4 \%$ ) and lower than in six of the comparison states (North Carolina had the highest percentage among Asian students at 2.6\%). Among Black students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among Black students ( $0.2 \%$ ) and lower than in five of the comparison states (Illinois had the highest percentage among Black students at 0.5\%). Among Hispanic students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among Hispanic students ( $0.4 \%$ ) and lower than in five of the comparison states (North Carolina had the highest percentage among Hispanic students at 1.2\%). Among White students in Massachusetts, the percentage was $0.5 \%$. This was equal to the national average among White students ( $0.5 \%$ ) but lower than in four of the comparison states (North Carolina had the highest percentage among White students at 1.3\%).

In 2008, female students earned 30.0\% of the Doctor's and First Professional Degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $31.1 \%$ for degrees earned by female students but higher than the percentage in five of the nine comparison states (Virginia had the highest percentage of degrees earned by female students at 50.0\%). Male students earned $70.0 \%$ of the Doctor's and First Professional Degrees in Mathematics and Statistics granted in Massachusetts. This was higher than the national average of $68.9 \%$ for degrees earned by male
students but lower than the percentage in five of the comparison states (Minnesota had the highest percentage of degrees earned by male students at 77.3\%). Asian students earned 3.3\% of the Doctor's and First Professional Degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $3.9 \%$ for degrees earned by Asian students and lower than the percentage in six of the comparison states (North Carolina had the highest percentage of degrees earned by Asian students at 8.8\%). Black students earned $0.0 \%$ of the Doctor's and First Professional Degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $1.6 \%$ for degrees earned by Black students and lower than the percentage in five of the comparison states (Virginia had the highest percentage of degrees earned by Black students at 4.5\%). Hispanic students earned $0.0 \%$ of the Doctor's and First Professional Degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $2.1 \%$ for degrees earned by Hispanic students and lower than the percentage in five of the comparison states (Minnesota had the highest percentage of degrees earned by Hispanic students at 4.5\%). White students earned $31.7 \%$ of the Doctor's and First Professional Degrees in Mathematics and Statistics granted in Massachusetts. This was lower than the national average of $35.8 \%$ for degrees earned by White students and lower than the percentage in five of the comparison states (Virginia had the highest percentage of degrees earned by White students at 50.0\%).

## Technical Notes

The Integrated Post-Secondary Education Data System (IPEDS) is maintained by the National Center for Education Statistics (NCES-a division of the U.S. Department of Education) and annually collects data from every college, university, and technical and vocational institution that participates in U.S. federal student financial aid programs (such as Pell grants and federal student loans). The Higher Education Act of 1965, as amended, requires that institutions that participate in federal student aid programs report data on enrollments, program completions, graduation rates, faculty and staff, finances, institutional prices, and student financial aid. The home page for NCES is: http://www.nces.ed.gov/. The home page for IPEDS is: http://nces.ed.gov/ipeds/.

## Summary

In 2008, 0.0\% of all Associate's Degrees and Certificates below Bachelor's Degrees granted in Massachusetts were in Physical Sciences. This percentage was lower than the national average ( $0.1 \%$ ) and lower than in five of the nine comparison states (Virginia had the highest percentage at $0.6 \%)$. Among female students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among female students (0.1\%) and lower than in four of the comparison states (Virginia had the highest percentage among female students at $0.6 \%$ ). Among male students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among male students ( $0.2 \%$ ) and lower than in six of the comparison states (Virginia had the highest percentage among male students at $0.6 \%$ ). Among Asian students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among Asian students ( $0.4 \%$ ) and lower than in four of the comparison states (Pennsylvania had the highest percentage among Asian students at 2.5\%). Among Black students in Massachusetts, the percentage was $0.1 \%$. This was equal to the national average among Black students ( $0.1 \%$ ) but lower than in two of the comparison states (Virginia had the highest percentage among Black students at 0.3\%). Among Hispanic students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among Hispanic students (0.1\%) and lower than in four of the comparison states (Virginia had the highest percentage among Hispanic students at $0.5 \%$ ). Among White students in Massachusetts, the percentage was $0.0 \%$. This was lower than the national average among White students ( $0.1 \%$ ) and lower than in six of the comparison states (Virginia had the highest percentage among White students at 0.8\%).

In 2008, female students earned $50.0 \%$ of the Associate's Degrees and Certificates below Bachelor's degrees in Physical Sciences granted in Massachusetts. This was higher than the national average of $41.4 \%$ for degrees earned by female students and higher than the percentage in five of the nine comparison states (Virginia had the highest percentage of degrees earned by female students at 67.1\%). Male students earned 50.0\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $58.6 \%$ for degrees earned by male students and lower than the percentage in six of the comparison states (Connecticut had the highest percentage of degrees earned by male students at 100.0\%). Asian students earned 0.0\% of the Associate's Degrees and Certificates below Bachelor's Degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $14.0 \%$ for degrees earned by Asian students and lower than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Asian students at 33.6\%). Black students earned $50.0 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Physical Sciences granted in Massachusetts. This was higher than the national average of $5.4 \%$ for degrees earned by Black students and higher than the percentage in all of the comparison states. Hispanic students earned $0.0 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of 10.0\% for degrees earned by Hispanic students and lower than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 13.6\%). White students earned $50.0 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $56.1 \%$ for degrees earned by White students and lower than the percentage in five of the comparison states (Connecticut and Minnesota had the highest percentage of degrees earned by White students at 100.0\%).

In 2008, 1.7\% of all Bachelor's degrees granted in Massachusetts were in Physical Sciences. This percentage was higher than the national average (1.4\%) and higher than the percentage in five of the nine comparison states (Minnesota had the highest percentage at 2.1\%). Among female students in Massachusetts, the percentage was $1.4 \%$. This was higher than the national average among female students (1.0\%) and higher than in eight of the comparison states (North Carolina had the highest percentage among female students at 1.6\%). Among male students in Massachusetts, the percentage was $2.2 \%$. This was higher than the national average among male students (1.9\%) and higher than in four of the comparison states (Minnesota had the highest percentage among male students at $3.2 \%$ ).

UMass Donahue Institute
Research and Evaluation Group

Among Asian students in Massachusetts, the percentage was $2.8 \%$. This was higher than the national average among Asian students (2.0\%) and higher than in six of the comparison states (North Carolina had the highest percentage among Asian students at 5.1\%). Among Black students in Massachusetts, the percentage was $1.0 \%$. This was higher than the national average among Black students (0.8\%) and higher than in seven of the comparison states (Massachusetts, Minnesota, and North Carolina had the highest percentage among Black students at 1.0\%). Among Hispanic students in Massachusetts, the percentage was $1.8 \%$. This was higher than the national average among Hispanic students (1.0\%) and higher than in all of the comparison states. Among White students in Massachusetts, the percentage was $1.6 \%$. This was higher than the national average among White students (1.4\%) but lower than in four of the comparison states (North Carolina had the highest percentage among White students at 2.1\%).

In 2008, female students earned 45.9\% of the Bachelor's degrees in Physical Sciences granted in Massachusetts. This was higher than the national average of $40.9 \%$ for degrees earned by female students and higher than the percentage in all of the nine comparison states. Male students earned $54.1 \%$ of the Bachelor's degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $59.1 \%$ for degrees earned by male students and lower than the percentage in all of the comparison states (Minnesota had the highest percentage of degrees earned by male students at 63.9\%). Asian students earned $11.7 \%$ of the Bachelor's degrees in Physical Sciences granted in Massachusetts. This was higher than the national average of $9.5 \%$ for degrees earned by Asian students and higher than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Asian students at 26.9\%). Black students earned $3.1 \%$ of the Bachelor's degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $5.2 \%$ for degrees earned by Black students and lower than the percentage in five of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 9.1\%). Hispanic students earned 5.1\% of the Bachelor's degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $5.8 \%$ for degrees earned by Hispanic students but higher than the percentage in seven of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 9.4\%). White students earned $62.2 \%$ of the Bachelor's degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $69.0 \%$ for degrees earned by White students and lower than the percentage in seven of the comparison states (Pennsylvania had the highest percentage of degrees earned by White students at 81.2\%).

In 2008, $0.9 \%$ of all Certificates above Bachelor's Degrees and Master's Degrees granted in Massachusetts were in Physical Sciences. This percentage was equal to the national average (0.9\%) but lower than the percentage in four of the nine comparison states (Connecticut had the highest percentage at $1.3 \%$ ). Among female students in Massachusetts, the percentage was $0.5 \%$. This was lower than the national average among female students ( $0.6 \%$ ) and lower than in five of the comparison states (New Jersey and North Carolina had the highest percentage among female students at 0.9\%). Among male students in Massachusetts, the percentage was $1.6 \%$. This was higher than the national average among male students (1.4\%) and higher than in five of the comparison states (Connecticut had the highest percentage among male students at 2.1\%). Among Asian students in Massachusetts, the percentage was $1.4 \%$. This was higher than the national average among Asian students ( $0.8 \%$ ) and higher than in eight of the comparison states (Connecticut had the highest percentage among Asian students at 1.7\%). Among Black students in Massachusetts, the percentage was $0.1 \%$. This was lower than the national average among Black students ( $0.3 \%$ ) and lower than in six of the comparison states (North Carolina had the highest percentage among Black students at 1.1\%). Among Hispanic students in Massachusetts, the percentage was $0.5 \%$. This was lower than the national average among Hispanic students ( $0.6 \%$ ) and lower than in four of the comparison states (Pennsylvania had the highest percentage among Hispanic students at 0.8\%). Among White students in Massachusetts, the percentage was $0.7 \%$. This was lower than the national average among White students ( $0.9 \%$ ) and lower than in six of the comparison states (California had the highest percentage among White students at 1.3\%).

UMass Donahue Institute Research and Evaluation Group

In 2008, female students earned $35.7 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $37.9 \%$ for degrees earned by female students and lower than the percentage in seven of the nine comparison states (New Jersey had the highest percentage of degrees earned by female students at 41.9\%). Male students earned 64.3\% of the Certificates above Bachelor's Degrees and Master's Degrees in Physical Sciences granted in Massachusetts. This was higher than the national average of $62.1 \%$ for degrees earned by male students and higher than the percentage in seven of the comparison states (Illinois had the highest percentage of degrees earned by male students at 68.6\%). Asian students earned 8.1\% of the Certificates above Bachelor's Degrees and Master's Degrees in Physical Sciences granted in Massachusetts. This was higher than the national average of $4.7 \%$ for degrees earned by Asian students and higher than the percentage in eight of the comparison states (California had the highest percentage of degrees earned by Asian students at 11.2\%). Black students earned $0.7 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $2.9 \%$ for degrees earned by Black students and lower than the percentage in eight of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 12.4\%). Hispanic students earned 1.7\% of the Certificates above Bachelor's Degrees and Master's Degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $3.6 \%$ for degrees earned by Hispanic students and lower than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 6.5\%). White students earned $40.7 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $54.0 \%$ for degrees earned by White students and lower than the percentage in eight of the comparison states (North Carolina had the highest percentage of degrees earned by White students at 65.9\%).

In 2008, 4.4\% of all Doctor's and First Professional Degrees granted in Massachusetts were in Physical Sciences. This percentage was higher than the national average (3.1\%) and higher than the percentage in eight of the nine comparison states (Connecticut had the highest percentage at 4.9\%). Among female students in Massachusetts, the percentage was $2.2 \%$. This was higher than the national average among female students (1.8\%) and higher than in seven of the comparison states (Connecticut had the highest percentage among female students at 3.2\%). Among male students in Massachusetts, the percentage was $6.6 \%$. This was higher than the national average among male students (4.4\%) and higher than in eight of the comparison states (Connecticut had the highest percentage among male students at 6.7\%). Among Asian students in Massachusetts, the percentage was $2.3 \%$. This was higher than the national average among Asian students (1.5\%) and higher than in seven of the comparison states (North Carolina had the highest percentage among Asian students at 5.3\%). Among Black students in Massachusetts, the percentage was $0.6 \%$. This was lower than the national average among Black students ( $0.9 \%$ ) but higher than in five of the comparison states (Virginia had the highest percentage among Black students at 1.6\%). Among Hispanic students in Massachusetts, the percentage was $2.4 \%$. This was higher than the national average among Hispanic students (1.6\%) and higher than in eight of the comparison states (Connecticut had the highest percentage among Hispanic students at 3.0\%). Among White students in Massachusetts, the percentage was $3.2 \%$. This was higher than the national average among White students (2.2\%) and higher than in eight of the comparison states (California had the highest percentage among White students at 4.3\%).

In 2008, female students earned 25.8\% of the Doctor's and First Professional Degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $30.0 \%$ for degrees earned by female students and lower than the percentage in seven of the nine comparison states (North Carolina had the highest percentage of degrees earned by female students at 36.8\%). Male students earned $74.2 \%$ of the Doctor's and First Professional Degrees in Physical Sciences granted in Massachusetts. This was higher than the national average of $70.0 \%$ for degrees earned by male students and higher than the percentage in seven of the comparison states (Virginia had the highest percentage of degrees earned by male students at 84.1\%). Asian students earned 6.1\% of the Doctor's and First Professional Degrees in Physical Sciences granted in Massachusetts. This was
higher than the national average of $4.6 \%$ for degrees earned by Asian students and higher than the percentage in six of the comparison states (North Carolina had the highest percentage of degrees earned by Asian students at 11.3\%). Black students earned 0.6\% of the Doctor's and First Professional Degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $1.7 \%$ for degrees earned by Black students and lower than the percentage in five of the comparison states (Virginia had the highest percentage of degrees earned by Black students at 6.8\%). Hispanic students earned 1.8\% of the Doctor's and First Professional Degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $2.6 \%$ for degrees earned by Hispanic students and lower than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 3.0\%). White students earned $37.7 \%$ of the Doctor's and First Professional Degrees in Physical Sciences granted in Massachusetts. This was lower than the national average of $41.9 \%$ for degrees earned by White students and lower than the percentage in five of the comparison states (North Carolina had the highest percentage of degrees earned by White students at 65.1\%).

## Technical Notes

The Integrated Post-Secondary Education Data System (IPEDS) is maintained by the National Center for Education Statistics (NCES-a division of the U.S. Department of Education) and annually collects data from every college, university, and technical and vocational institution that participates in U.S. federal student financial aid programs (such as Pell grants and federal student loans). The Higher Education Act of 1965, as amended, requires that institutions that participate in federal student aid programs report data on enrollments, program completions, graduation rates, faculty and staff, finances, institutional prices, and student financial aid. The home page for NCES is: http://www.nces.ed.gov/. The home page for IPEDS is: http://nces.ed.gov/ipeds/.

Data Source: National Center for Education Statistics: Integrated Post-Secondary Education Data System.

## Summary

Degree completions in Science Technologies/Technicians are presented here as they are included in the All STEM Degrees totals. However, because the number of Science Technologies/Technicians degrees is small in Massachusetts and most of the comparison states, the data are not summarized.

## Technical Notes

The Integrated Post-Secondary Education Data System (IPEDS) is maintained by the National Center for Education Statistics (NCES-a division of the U.S. Department of Education) and annually collects data from every college, university, and technical and vocational institution that participates in U.S. federal student financial aid programs (such as Pell grants and federal student loans). The Higher Education Act of 1965, as amended, requires that institutions that participate in federal student aid programs report data on enrollments, program completions, graduation rates, faculty and staff, finances, institutional prices, and student financial aid. The home page for NCES is: http://www.nces.ed.gov/. The home page for IPEDS is: http://nces.ed.gov/ipeds/.

## Summary

In 2008, 44.5\% of all Associate's Degrees and Certificates below Bachelor's Degrees granted in Massachusetts were in all STEM majors. This percentage was higher than the national average (39.9\%) and higher than in eight of the nine comparison states (Virginia had the highest percentage at 55.8\%). Among female students in Massachusetts, the percentage was $48.6 \%$. This was higher than the national average among female students (46.6\%) and higher than in five of the comparison states (Virginia had the highest percentage among female students at 59.5\%). Among male students in Massachusetts, the percentage was $35.9 \%$. This was higher than the national average among male students (29.1\%) and higher than in eight of the comparison states (Virginia had the highest percentage among male students at 48.5\%). Among Asian students in Massachusetts, the percentage was 34.6\%. This was lower than the national average among Asian students (38.4\%) and lower than in seven of the comparison states (New Jersey had the highest percentage among Asian students at 55.1\%). Among Black students in Massachusetts, the percentage was $49.8 \%$. This was higher than the national average among Black students (44.6\%) and higher than in seven of the comparison states (Virginia had the highest percentage among Black students at 64.6\%). Among Hispanic students in Massachusetts, the percentage was $41.1 \%$. This was higher than the national average among Hispanic students (40.9\%) and higher than in seven of the comparison states (Virginia had the highest percentage among Hispanic students at 48.3\%). Among White students in Massachusetts, the percentage was $41.5 \%$. This was higher than the national average among White students (39.2\%) and higher than in six of the comparison states (Virginia had the highest percentage among White students at 53.2\%).

In 2008, female students earned $74.4 \%$ of the Associate's Degrees and Certificates below Bachelor's degrees in all STEM majors granted in Massachusetts. This was higher than the national average of $72.1 \%$ for degrees earned by female students and higher than the percentage in six of the nine comparison states (Connecticut had the highest percentage of degrees earned by female students at 76.9\%). Male students earned $25.6 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $27.9 \%$ for degrees earned by male students and lower than the percentage in six of the comparison states (North Carolina and Virginia had the highest percentage of degrees earned by male students at 29.2\%). Asian students earned 3.0\% of the Associate's Degrees and Certificates below Bachelor's Degrees in all STEM majors granted in Massachusetts. This was lower than the national average of 4.4\% for degrees earned by Asian students and lower than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Asian students at 16.5\%). Black students earned 10.9\% of the Associate's Degrees and Certificates below Bachelor's Degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $16.4 \%$ for degrees earned by Black students and lower than the percentage in seven of the comparison states (Virginia had the highest percentage of degrees earned by Black students at 31.0\%). Hispanic students earned 8.3\% of the Associate's Degrees and Certificates below Bachelor's Degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $15.1 \%$ for degrees earned by Hispanic students and lower than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 32.8\%). White students earned $58.0 \%$ of the Associate's Degrees and Certificates below Bachelor's Degrees in all STEM majors granted in Massachusetts. This was higher than the national average of $55.8 \%$ for degrees earned by White students and higher than the percentage in five of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 81.1\%).

In 2008, 22.6\% of all Bachelor's degrees granted in Massachusetts were in all STEM majors. This percentage was lower than the national average (23.8\%) and lower than the percentage in five of the nine comparison states (Pennsylvania had the highest percentage at 26.0\%). Among female students in Massachusetts, the percentage was $20.4 \%$. This was lower than the national average among female students $(21.0 \%)$ but higher than in six of the comparison states (Pennsylvania had the highest percentage among female students at 23.5\%). Among male students in Massachusetts, the percentage was $25.8 \%$. This was lower than the national average among male students (27.6\%) and lower than in six of the comparison states (Pennsylvania had the highest percentage among male

Indicator 25: Number of college students who complete degrees in all STEM majors
students at 29.3\%). Among Asian students in Massachusetts, the percentage was 34.8\%. This was higher than the national average among Asian students (34.4\%) but lower than in five of the comparison states (New Jersey had the highest percentage among Asian students at 43.6\%). Among Black students in Massachusetts, the percentage was $20.5 \%$. This was higher than the national average among Black students (20.3\%) and higher than in six of the comparison states (New York had the highest percentage among Black students at 21.8\%). Among Hispanic students in Massachusetts, the percentage was $20.2 \%$. This was equal to the national average among Hispanic students (20.2\%) but higher than in seven of the comparison states (North Carolina had the highest percentage among Hispanic students at 22.4\%). Among White students in Massachusetts, the percentage was 21.9\%. This was lower than the national average among White students (23.6\%) and lower than in five of the comparison states (Pennsylvania had the highest percentage among White students at 26.0\%).

In 2008, female students earned $52.2 \%$ of the Bachelor's degrees in all STEM majors granted in Massachusetts. This was higher than the national average of $50.6 \%$ for degrees earned by female students and higher than the percentage in seven of the nine comparison states (Connecticut had the highest percentage of degrees earned by female students at 54.3\%). Male students earned 47.8\% of the Bachelor's degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $49.4 \%$ for degrees earned by male students and lower than the percentage in seven of the comparison states (California had the highest percentage of degrees earned by male students at $54.0 \%$ ). Asian students earned 11.1\% of the Bachelor's degrees in all STEM majors granted in Massachusetts. This was higher than the national average of $9.4 \%$ for degrees earned by Asian students and higher than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Asian students at 31.6\%). Black students earned $5.0 \%$ of the Bachelor's degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $7.5 \%$ for degrees earned by Black students and lower than the percentage in six of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 15.0\%). Hispanic students earned 4.4\% of the Bachelor's degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $7.0 \%$ for degrees earned by Hispanic students but higher than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 12.5\%). White students earned 64.3\% of the Bachelor's degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $66.3 \%$ for degrees earned by White students and lower than the percentage in six of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 80.7\%).

In 2008, 22.1\% of all Certificates above Bachelor's Degrees and Master's Degrees granted in Massachusetts were in all STEM majors. This percentage was equal to the national average (22.1\%) but lower than the percentage in six of the nine comparison states (North Carolina had the highest percentage at 27.5\%). Among female students in Massachusetts, the percentage was 18.9\%. This was lower than the national average among female students (19.3\%) and lower than in five of the comparison states (North Carolina had the highest percentage among female students at 27.0\%). Among male students in Massachusetts, the percentage was $27.1 \%$. This was higher than the national average among male students (26.4\%) but lower than in six of the comparison states (Connecticut had the highest percentage among male students at 30.9\%). Among Asian students in Massachusetts, the percentage was $35.1 \%$. This was higher than the national average among Asian students (33.6\%) but lower than in six of the comparison states (Virginia had the highest percentage among Asian students at $51.6 \%)$. Among Black students in Massachusetts, the percentage was $10.7 \%$. This was lower than the national average among Black students (15.3\%) and lower than in all of the comparison states (North Carolina had the highest percentage among Black students at 23.9\%). Among Hispanic students in Massachusetts, the percentage was $17.2 \%$. This was lower than the national average among Hispanic students (17.9\%) and lower than in five of the comparison states (North Carolina had the highest percentage among Hispanic students at 26.6\%). Among White students in Massachusetts, the percentage was 19.6\%. This was lower than the national average among White students (19.8\%) but higher than in five of the comparison states (North Carolina had the highest percentage among White students at 25.6\%).

UMass Donahue Institute Research and Evaluation Group

In 2008, female students earned $64.8 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $52.9 \%$ for degrees earned by female students and lower than the percentage in five of the nine comparison states (Minnesota had the highest percentage of degrees earned by female students at 63.1\%). Male students earned 47.6\% of the Certificates above Bachelor's Degrees and Master's Degrees in all STEM majors granted in Massachusetts. This was higher than the national average of 47.1\% for degrees earned by male students and higher than the percentage in five of the comparison states (Virginia had the highest percentage of degrees earned by male students at 53.5\%). Asian students earned $8.4 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in all STEM majors granted in Massachusetts. This was higher than the national average of $7.9 \%$ for degrees earned by Asian students and higher than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Asian students at 19.4\%). Black students earned $2.8 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $6.3 \%$ for degrees earned by Black students and lower than the percentage in all of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 12.6\%). Hispanic students earned 2.4\% of the Certificates above Bachelor's Degrees and Master's Degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $4.7 \%$ for degrees earned by Hispanic students and lower than the percentage in six of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 7.0\%). White students earned $45.7 \%$ of the Certificates above Bachelor's Degrees and Master's Degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $51.6 \%$ for degrees earned by White students and lower than the percentage in six of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 66.8\%).

In 2008, 48.9\% of all Doctor's and First Professional Degrees granted in Massachusetts were in all STEM majors. This percentage was lower than the national average (49.2\%) but higher than the percentage in seven of the nine comparison states (Pennsylvania had the highest percentage at 63.1\%). Among female students in Massachusetts, the percentage was $48.4 \%$. This was lower than the national average among female students (49.0\%) but higher than in seven of the comparison states (Pennsylvania had the highest percentage among female students at 65.5\%). Among male students in Massachusetts, the percentage was $49.5 \%$. This was higher than the national average among male students (49.3\%) and higher than in seven of the comparison states (Pennsylvania had the highest percentage among male students at 60.4\%). Among Asian students in Massachusetts, the percentage was $68.4 \%$. This was higher than the national average among Asian students (64.8\%) and higher than in six of the comparison states (Pennsylvania had the highest percentage among Asian students at 80.4\%). Among Black students in Massachusetts, the percentage was $42.7 \%$. This was higher than the national average among Black students (35.4\%) and higher than in eight of the comparison states (Pennsylvania had the highest percentage among Black students at 49.5\%). Among Hispanic students in Massachusetts, the percentage was $41.9 \%$. This was higher than the national average among Hispanic students (38.8\%) and higher than in seven of the comparison states (Pennsylvania had the highest percentage among Hispanic students at 59.0\%). Among White students in Massachusetts, the percentage was $41.9 \%$. This was lower than the national average among White students (46.4\%) but higher than in five of the comparison states (Pennsylvania had the highest percentage among White students at 61.9\%).

In 2008, female students earned $50.4 \%$ of the Doctor's and First Professional Degrees in all STEM majors granted in Massachusetts. This was higher than the national average of $50.2 \%$ for degrees earned by female students but lower than the percentage in five of the nine comparison states (Pennsylvania had the highest percentage of degrees earned by female students at 54.8\%). Male students earned $49.6 \%$ of the Doctor's and First Professional Degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $49.8 \%$ for degrees earned by male students but higher than the percentage in five of the comparison states (California had the highest percentage of degrees earned by male students at 53.5\%). Asian students earned $16.1 \%$ of the Doctor's and First Professional Degrees in all STEM majors granted in Massachusetts. This was
higher than the national average of $12.1 \%$ for degrees earned by Asian students and higher than the percentage in five of the comparison states (New Jersey had the highest percentage of degrees earned by Asian students at $23.6 \%$ ). Black students earned $3.7 \%$ of the Doctor's and First Professional Degrees in all STEM majors granted in Massachusetts. This was lower than the national average of 4.3\% for degrees earned by Black students and lower than the percentage in five of the comparison states (North Carolina had the highest percentage of degrees earned by Black students at 7.5\%). Hispanic students earned 2.8\% of the Doctor's and First Professional Degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $4.0 \%$ for degrees earned by Hispanic students and lower than the percentage in five of the comparison states (California had the highest percentage of degrees earned by Hispanic students at 4.5\%). White students earned $44.7 \%$ of the Doctor's and First Professional Degrees in all STEM majors granted in Massachusetts. This was lower than the national average of $56.3 \%$ for degrees earned by White students and lower than the percentage in seven of the comparison states (Minnesota had the highest percentage of degrees earned by White students at 68.1\%).

## Technical Notes

The Integrated Post-Secondary Education Data System (IPEDS) is maintained by the National Center for Education Statistics (NCES-a division of the U.S. Department of Education) and annually collects data from every college, university, and technical and vocational institution that participates in U.S. federal student financial aid programs (such as Pell grants and federal student loans). The Higher Education Act of 1965, as amended, requires that institutions that participate in federal student aid programs report data on enrollments, program completions, graduation rates, faculty and staff, finances, institutional prices, and student financial aid. The home page for NCES is: http://www.nces.ed.gov/. The home page for IPEDS is: http://nces.ed.gov/ipeds/.

## Summary

In 2008, 16.7\% of all employed people in Massachusetts were employed in STEM occupations (up from $16.4 \%$ in 2007). This was higher than the national average of $13.0 \%$ in 2008 (up from $12.6 \%$ in 2007) and higher than percentage in all nine comparison states. In 2008, $2.4 \%$ of all employed people in Massachusetts were employed in Architecture and Engineering occupations (same as in 2007). This was higher than the national average of $1.9 \%$ in 2008 (same as in 2007) and higher than percentage in all nine comparison states. In 2008, 3.8\% of all employed people in Massachusetts were employed in Computer and Mathematical occupations (up from 3.6\% in 2007). This was higher than the national average of $2.4 \%$ in 2008 (same as in 2007) and higher than percentage in eight of the comparison states (Virginia had the highest percentage of people employed in Computer and Mathematical occupations in 2008 at 4.9\%). In 2008, 6.4\% of all employed people in Massachusetts were employed in Healthcare Practitioner and Technical occupations (same as in 2007). This was higher than the national average of $5.2 \%$ in 2008 (up from $5.1 \%$ in 2007) and higher than percentage in all nine comparison states. In 2008, 3.1\% of all employed people in Massachusetts were employed in Healthcare Support occupations (up from $3.0 \%$ in 2007). This was higher than the national average of $2.8 \%$ in 2008 (up from $2.7 \%$ in 2007) but lower than percentage in five of the comparison states (New York and North Carolina had the highest percentage of people employed in Healthcare Support occupations in 2008 at $3.6 \%)$. In 2008, $0.8 \%$ of all employed people in Massachusetts were employed in Life and Physical Sciences occupations (down from $0.9 \%$ in 2007). This was higher than the national average of $0.5 \%$ in 2008 (up from $0.6 \%$ in 2007) and higher than percentage in all nine comparison states.

## Technical Notes

The Bureau of Labor Statistics (BLS) is "...is the principal fact-finding agency for the Federal Government in the broad field of labor economics and statistics." The BLS is an independent agency that "...collects, processes, analyzes, and disseminates..." statistical data to parties including the general public; federal, state, and local government departments and staff; and businesses. The Occupational Employment Statistics (OES) program calculates estimates for employment and wages in over 800 occupations for the nation, states, metropolitan and non-metropolitan areas. The home page for the BLS is http://www.bls.gov/. The home page for the OES program is: http://www.bls.gov/oes/.

## Summary

In 2008, there was an estimated 64,789 job vacancies across all occupations, 15,170 (or 23.4\%) in STEM occupational areas, reported by employers in Massachusetts. These vacancies translated to an estimated $2.3 \%$ job vacancy rate for all occupations and $2.8 \%$ job vacancy rate for STEM occupations. Approximately $2.7 \%$ of all job vacancies were in Architecture and Engineering occupations, $4.8 \%$ in Computer and Mathematical occupations, $9.5 \%$ in Healthcare Practitioners and Technical occupations, 4.0\% in Healthcare Support occupations, and 2.4\% in Life, Physical, and Social Science occupations.

## Technical Notes

Data for Indicator 27 were only available for Massachusetts.
The Massachusetts Department of Workforce Development is part of the Executive Office of Labor and Workforce Development. The Job Vacancy Survey is one of many economic data collection and analysis programs maintained by the Department. The Job Vacancy Survey is a survey of 10,000 employers across the state of Massachusetts that has been conducted semi-annually since 2002. The survey collects the following information:

- The number and types of positions open for immediate hire
- The educational and training requirements for those positions
- The wages and benefits offered to applicants for those positions
- The degree to which employers are satisfied with the educational and training attainments of their new hires
- The hiring activities planned by employers for the next six months
