- [About](#)

A recent study conducted by [Harris Interactive](#) for publisher [Pearson](#) showed that, while 44 percent of kids are using some kind of tablet for learning, 92 percent of kids surveyed believe that using a tablet in school will change how they learn in the future. And 90 percent of students said using a tablet makes learning more fun.

Though the iPad gets most of the limelight, other tablet makers like Intel, Samsung, Google, and Amazon are getting into the game, providing a variety of education programming, apps, and curriculum. From plug-in paint tools to magnifying glasses, tablet makers are competing for a share of the education market by creating new ways to use tablets in class.

Though this is not an exhaustive list of every type of tablet used in schools, here are the top-rated devices for education and a look what's distinct about each one.
